Thursday

In Saturday's Issue

The DSS&A will soon adopt the standard code of railway signals prepared by the general time convention and in use on the principal roads of the United States and Canada. In order that all employes of the road may familiarize themselves with the new signals in advance the Mining Journal will publish the code in full on Saturday morning, June 9, and every employe is desired by the officials to secure a copy of the paper on that date and study up the signals in order that trouble may be avoided at the time of their introduction. Remember the code appears Saturday, June 9.
