Negaunee - There have been lively times in the railroad yards for the past few days. Wednesday night a train of ore cars was ditched on the "east branch." Thursday afternoon as the engine that pulled the east bound freight on the DSS&A was switching near the depot here, it left the rails and three hours were spent in getting the big locomotive on the track again. Yesterday morning South Shore No. 10 while at work at one of the mines was derailed. It took several hours time and a gang of men to get it in shape to run again.
