There are now on exhibition in this city some specimens of iron and steel, manufactured by a new process, that city some specimens of iron and steel, manufactured by a new process, that exceed anything we have before seen. Every article made from this new metal is of superior excellence. Files and razors of a degree of excellence equal at least, if not superior to anything we have before seen, are made of this metal. It is gratifying, too, to know that the discovery is an American one, and as such we doubt not will seen find abundance of the needful to make it a success. It would seem that the quality and cheapness of the metal would at once secure its success. Superior British iron sells here at twenty one cents a pound. It is claimed that our common pig iron can be treated by this new process and made to equal the best British and Swedish, at the trifling expense of seventy-five cents or a dollar per ton.
