

SWINEFORD & BEARDSLEY.

VOLUME 20. Marquette, Lake Superior, Michigan, Saturday, July 13, 1872.

THE ANCIENT MINES AND MINERS OF LAKE SUPERIOR.

Some writers, speaking of the remains of ancient mining operations on Lake Superior, set them down as the work of French explorers who came into the country contemporaneously with the early Jesuit missionaries.

Such may possibly be the correct theory, but we think it is weakened some by the fact that the earliest accounts we have of the existence of native copper were given by the French missionaries, who themselves make mention of the fact that the Indians had learned the uses of the metal, out of which they were used to fashion rude instruments, spoons, bracelets, &c., for themselves.

In fact, these remains of ancient mining operations were the work of another party, as early as 1785, and carried on mining operations to a considerable extent.

Upon this point we find very interesting facts and figures, in a report on the geological and mineralogical survey of the mineral lands of the Upper Peninsula, made by Charles F. Jackson, United States Geologist, in 1849.

Speaking of the remains of ancient mining operations on Lake Superior, Dr. Jackson says: "Long anterior to the settlement of this country, the Indians, who were familiar with the use of native metal, such as gold, silver, copper, and perhaps iron ore, their wandering mode of life, and their knowledge of the interior of the continent, and their knowledge of the uses of the metal, out of which they were used to fashion rude instruments, spoons, bracelets, &c., for themselves.

It is not surprising that the Indians should have learned the uses of the metal, out of which they were used to fashion rude instruments, spoons, bracelets, &c., for themselves. It is not surprising that the Indians should have learned the uses of the metal, out of which they were used to fashion rude instruments, spoons, bracelets, &c., for themselves.

It is not surprising that the Indians should have learned the uses of the metal, out of which they were used to fashion rude instruments, spoons, bracelets, &c., for themselves. It is not surprising that the Indians should have learned the uses of the metal, out of which they were used to fashion rude instruments, spoons, bracelets, &c., for themselves.

clear, were very anxious to get information concerning the facilities of copper, and they were all in a hurry to get on their way.

Soon after the establishment of the French colonies in Canada, the Jesuit fathers came, and their efforts in spreading the Christian religion over the northern portion of this continent. This was the way for the advent of that successful and noble institution, the Society of Jesus, which has since that time been the most powerful of our age.

The first account of the occurrence of native copper in this country, was given by the French missionaries, who themselves make mention of the fact that the Indians had learned the uses of the metal, out of which they were used to fashion rude instruments, spoons, bracelets, &c., for themselves.

It is not surprising that the Indians should have learned the uses of the metal, out of which they were used to fashion rude instruments, spoons, bracelets, &c., for themselves. It is not surprising that the Indians should have learned the uses of the metal, out of which they were used to fashion rude instruments, spoons, bracelets, &c., for themselves.

IN A GARRET.

BY ELIZABETH AKERS ALLEN.

This realm is sacred to the silent past, And their efforts in spreading the Christian religion over the northern portion of this continent. This was the way for the advent of that successful and noble institution, the Society of Jesus, which has since that time been the most powerful of our age.

Here's a strange old story, ever telling, A home-sick smile of dry forgotten herbs— A mummy color, as of mouldering things.

Below the low joints of the sleeping floor, Two ead-garments hang, a gloomy row— Like tall, fantastic ghosts which stand aloof.

Here, in the summer, at a broken pace, The yellow wax come in, and hazy build, And the yellow wax come in, and hazy build, And the yellow wax come in, and hazy build.

So the present dream and the past; So the warm, living heart that beats the light, Faint in the unresponsive darkness vast.

Why look these shadows of their sacred trust? Let the thick woods hide the day once more, Leave the dead years to silence and to dust, And close again the long unopened door.

THE NEGATIVE CELEBRATION.—The following letter was written for last week's issue but did not reach us until after our paper had gone to press.

Our celebration has not been as immense as usual. The customary morning salute, at sunrise, and the evening salute, at sunset, were given, and the celebration was a success.

Our celebration has not been as immense as usual. The customary morning salute, at sunrise, and the evening salute, at sunset, were given, and the celebration was a success.

THE JOURNAL

MARQUETTE, SATURDAY, JULY 13, 1872. ADVERTISING RATES.

ENLARGEMENT.—This issue completes the fourth volume of the Mining Journal since the advent of the present editorial management.

Next week our paper will appear with lengthened columns, making an enlargement equal to an additional column to the page.

The work on the Escanaba furnace is progressing favorably, nearly if not quite all the labor having been received from Pittsburgh.

Next week our paper will appear with lengthened columns, making an enlargement equal to an additional column to the page.

The Champion Furnace, is making from sixteen to eighteen tons per day of A. I. iron, and is in good shape for a long run.

SHIPPMENTS of iron ore and pig iron from the port of Marquette, for the season, up to and including July 11th, were:

The small little locomotive in use on the Smith Mine branch was built by Porter, Bell & Co., Pittsburgh.

EXPLORATION AND ASSAY OFFICE.—Major T. B. Brooks has fitted up, in connection with the State Geological Survey office, a chemical laboratory for the examination and assay of ores.

GOOD.—On Monday last, all the forces employed at the Saginaw mine, and at the Lake Superior locations on section 29, were set to work on the Saginaw branch railroad.

CROCKER.—Mr. Crocker, who has lately returned from Cleveland, informs us that he has contracted for the delivery of 16,000 tons of ore from the new mine owned by himself and Messrs. Sheldon and Allen.

GRAND CENTRAL.—This mine continues to look well; indeed the appearances are very favorable to the ultimate development of a valuable property.

FAYETTE.—We learn from Mr. Rhodes, the resident agent of the superintendent, that the Jackson furnace continues to do excellent work.

MAAS & LONSTON'S hematite mines, near Negaunee, continue to improve, and a new valuable discovery is reported.

STATEMENT of iron ore, pig iron &c., shipped over the Marquette & Ontonagon railroad up to and including Saturday, July 6th, 1872:

Table with columns: Item, Quantity, Value. Includes Lake Superior Iron Co., Champion Iron Co., etc.

WESTWARD.—The work on the Escanaba furnace is progressing favorably, nearly if not quite all the labor having been received from Pittsburgh.

WESTWARD.—The work on the Escanaba furnace is progressing favorably, nearly if not quite all the labor having been received from Pittsburgh.

WESTWARD.—The work on the Escanaba furnace is progressing favorably, nearly if not quite all the labor having been received from Pittsburgh.

WESTWARD.—The work on the Escanaba furnace is progressing favorably, nearly if not quite all the labor having been received from Pittsburgh.

It is said that by the expenditure of \$50,000 for leeches on the Mississippi River, 7,000,000 acres of cotton land and 2,500,000 acres of sugar land would be reclaimed.

THE timber famine in the prairie country has a fair prospect of relief.

THE impression is gaining ground that Alaska is not to prove so bad a bargain as was supposed.

PROTECTION OF PUBLISHERS AGAINST HEAT.—A plan has been adopted in some parts of Wales for the protection of publishers from the heat of the furnaces.

MEN in Eastern Nevada, says the Elvira Sentinel, have not as yet overcome the fear that before many years the mines will be worked out.

THE NARROW GAUGE CONVENTION.—We find in the following report of the doings of the narrow gauge convention.

THE narrow gauge is especially adapted to mountainous and mining regions of the country.

That a first-class narrow gauge road, fully and elegantly equipped, will not, under any circumstances, cost more than three-fifths as much as a broad gauge.

That the narrow gauge is in every way more completely adapted to the general wants and economies of the people of the country than the broad.

That these conclusions are not arrived at by mere estimates, but from experience and actual results.

That the details of the proceedings of this convention show that the position among the most powerful progressive agents of the country is held by the long-asserted, its evidence as second to none.

LOOSE.—Regular meeting of the Marquette Lodge No. 24, held on Monday evening, in Odd Fellows Hall.

REWARD.—I will pay FIFTEEN DOLLARS for information which will lead to the detection and conviction of the parties who broke up the Methodist Episcopal Church, in Ishpeming, Michigan, on the 27th of July, 1872.
