to considerable space in it.

ays, is to be measured by the time of growth. When once the bones and epiphyses are united the body grows no more, and it is at twenty years this union is effected in man. In the camel it takes place at eight, in the

horse at five, in the lion at four, in the dog at two, in the rabbit at one. The natural termination of life is five times that of the develop-ment period. Man being twenty years in growing, lives five times twenty years, that is to say one hundred years; the camel is eight years in growing, and lives forty years; the horse is five years in growing, and lives twenty five years, and so with other animals.

from eighty to a hundred years. Providence ms given man a century of life, but he does not attain it because he inherits disease, cats is inwholesome food, gives license to his parions, and permits vexation to disturb his

growth and decline, and these into infancy, he twentieth year, youth to the littleth year, because it is during this period the tissues be some firm; virility from fifty to seventy-five, 8 during which the organism remains complete long or short time, as the diminution of reserved forces is hastened or retarded.

to the purpose. It consist of the usual coil which is driven by friction gear instead of by toothed gear or the use of a clutch as is usually w case. Λ friction sectional brake is also applied instead of the circumferential band rake. A shaft, which receives the power from larly grooved shell which embraces the circum-The brake consists of a sugement with grooved face, babblided, which engages with the by the foot of the engineer. The drums are set in eccentric bearings and by use of a fixed lever and efficient apparatus, which, through power furnished by a 7x14 engine, will raise 100 tons of ore per day from a mine 100 feet deep. We mmend it to the attention of operators generally, instead of the clumsy, slow and expenive machinery in use.
