NEW SERIES-No. 428.

CITY AND COUNTY.

This paper is kept on file in the office of L. F. Booth, general eastern agent Chicago & Northwestern railway, 415 Broadway, New York city. Our friends, when in New York, are cordially invited to call in and read it at any time. They will always be welcome.

CINDERS.

-"flold me close, and don't take long steps" is not exactly a slang expression, but it's a new one. -Gilmore used to boast that he "never lost a man;" but now he can't say he never lost a woman! -The gentle housefly lingereth no longer on

-Scoville & Johnson claim to have an artist in their employ who can fit any quantity of old pipe

on a new stove, and not swear above a whisperunless he is alone. -Ashland wants a photographer to locate in that town. We believe it would wrinkle the lens of the

best camera in the country to take a picture of one to vote for! of those Ashland girls. -Nobody has accused Sam. Tilden of being the builder of the Tibbits house. The Negaunee morality and lay up treasures for yourself on earth

of the man's infernal wickedness. -We didn't get a copy of the Duluth paper this week. It has been alonesome time ever since. We suppose the publisher got a new subscriber and gave him our copy. Put in an extra sheet hereaf-

ter, darling. "glide," and part their hair over their massive intellects mathematically in the middle, were not made in | to be born both poor and lazy. vain, though the Creator's object is somewhat ob-

scure to ordinary people. -The interesting fushion announcement is made that red silk petticoats will be indispensable to the feminine get-up next winter. With striped stockings and slushy street crossings, this new arrange-

ment promises some interesting scenery. -What a blessed thing it would have been if "Al." had taken the Tibbits house along with him He would have proved himself a public benefactor, and saved some good citizen the trouble of prosecuting an alderman on the charge of maintaining a Or "honest Sam Tilden" should give him the "goose."

-It's not true-the report that Sidnadams had voluntarily contributed \$1,500 to the benefit of a His feelings are such, as he skips gayly along, gallant mariner of the "unsalted sea." It's a reflection upon his character for benevolence which Of the victor and spoils, and other good things, none of his friends will be willing to credit.

-Our fellow citizen who has been howlin summer, "Leave that door open !" has changed his To keep that dog fast as she valued her life ; tune, and new sings in the bass-est tones :- "Why | For the act that has brought him has also brought fame the d-I dont you shut that door !"-the same old | And the rest of the fat things called political game. song with a slight variation.

-Sidnadams is reported to have talked fifteen men to death, at the Sault, recently, and when he His ambition is crushed, his fair fame has fell came away the sixteenth was in a precarious condition. A straight jacket and a cell in the lunatic asylum, or some other state institution, is the only | For he broks heaven's law for his own selfish gain. proper remedy with which to rid the community of such a pest.

-To avoid misunderstanding we will say now that the MINING JOURNAL will not have use for original poetry about "The sad days of autumn," "The falling leaves," or anything of the sort this ladies who grind out this sort of stuff will please

-The Chicago Times reports the arrest of a man "named Adams, of Michigan," in Pennsylvania, for an attempted outrage on a little orphan girl. We are pleased to note, in this connection, the fact that the Marquette alderman of that name, now absent, is in Buffalo, and hasn't been near Pennsylvania.

-Bustles are at a discount. Stiff ruffles on petticoats, and coarse facings, impart to the train a graceful sweep, and extend the same to an artistic proportion, obtaining a better effect than could possibly be had from wearing the best bustle ever constructed, even if built entirely of MINING JOUR-NALS and excluding all wicked political papers like the Negaunee Herald.

-Sidnadams to Capt. -: "Come back, come back across the stormy water, my tar-tar, oh, my tar-tar!" And then he sits down and solemnly swears, by the great horn spoon, that never, no, never, never, will he again buy up another mortgage on a chattel so thoroughly evanescent as a steam tug!

-A new ballad just now in the papers is entitled, "Tell Me, Mary, How to Woo Thee." If Mary is a sensible girl she will tell him not to come oftener the health and augments the old man's gas bill to at the corner of Third and Ridge streets. an alarming extent.

-A friend of Capt. Al. Robinson has been roaming about the city the past week in search of Sidnadams, with the avowed purpose of converting his efforts to head off the fire flend. Persons know- to visit this place. his nasal protuberance into a large sized blood sausage, if he dared to reiterate the charge that Al. had "lit out" with fraudulent intent. In the meantime Sid. is in Buffalo trying to talk somebody to

-The Northern Light man says he has more lady subscribers than any other paper in that portion of the Dominion. This statement puzzles us. The Light is too small to make a good bustle, and, as the Soo girls use cotton for-for-other purposes, we don't understand why they subscribe for it. It can't be they actually read the Light.

-It is said there is more pure cussedness in one drink of Ishpeming whisky than there is in a quart | the county jail last Saturday, through trial and senof Marquette's worst bug juice. We don't "know | tence, by that terror to local evil doers, judge how it is ourself," but the man who said so has O'Keeffe. They had fleeced a stranger-a greeney evidently been to Ishpeming, and we advise him from Houghton-and getting wind of trouble, they not to go there again very soon. He'd get a flea returned the fellow his watch and money, bought

sorrowing hearts of all honest people fly out with return and make complaint, and the parties were the elasticity of india rubber towards our fellow arrested and tried with the result stated-\$100 fine. citizen-Marquette's great public benefactor-Sid- each, and sixty days in jail. On yesterday they nadams, in this, the hour of his sad affliction. Fif- were taken before court commissioner Dalliba on a | twenty-five voters in his township, and party feeling earned wealth has been absorbed, taken wings, fled, custody.

Sidnadams is sad, and refuses to be comforted. Monday or Tuesday, and a jury of intelligent citi- major's side of the fence were but three of the "Ah! excuse these tears!"

-A long time coming, but it's here-the equi-

-Political economy-the kind that enables a man to owe a magnificent board bill, while he bets hun. dreds of dollars on the result of the presidential

-If this thing keeps on, the political flag-maker will derive no inconsiderable income from Marquette. Political flags of both complexions are going up all over the city. -"He who steals our purse steals trash;" but the

the window panes, and the fragrant potato bug is at | man who filches away the good name (?) of Sid-"poor, indeed"-and he'd better let it alone. -He's a staunch republican, but a great many of

his neighbors didn't know it until they heard him swear, when, after having assisted in raising a pole on Ridge street, the owner ran up to its peak a flag bearing the names of the candidates he ain't going

-Now, young man here's a chance. You can do more than a thousand ministers for the cause of Herald should not overlook this damning evidence and in heaven, by simply inventing some method by which two joints of stovepipe can be made to fit together without swearin.'

-The saddest spectacle in life, is to see a poor fellow who is too lazy to work and too proud to beg, standing on the street corner mournfully fumbling with a broken comb and a broken-blade jack knife -Young men who can dance the "Hawvad" and in his pocket, and ruminating on what the coming winter has in store for him. Its a double misfortune

GEORGIE'S-NOT LUCIFER'S-FALL. As Georgie was walking, for pleasure, one day, He spied a small canine curled up, by the way. A cup of cold milk sat close by his side, And a collar of leather around his small neck was tied ; His belly was full, and he had not a care, For his master was wealthy and gave him good fare.

Now, Georgie was envious, discontented and mad, He wished to do something most desperately bad ; And to steal this poor dog would give him a name Like the rest of "Grant's minions," so well known to fame He could hold his position till death cut him loose,

So he grasps the young purp with a trembling hand. Turns on his heel and lights out o'er the sand. That he chants to himself a political song Which the long rule of "Grantism" assuredly brings.

When he reaches his home, he charges his wif But, alas for poor Georgie and his sky-scraping hope ! The law fell upon him like a pot of hot soap.

From the heights of a heaven to the depths of a hell. Henceforth he must wander with the brand of a Cain. The moral of this is, to be straight as a line, And if you want fame, don't steal a canine; For it leads to a prison so dreary and still, Where Zach Chandler can't assess you for a five dollar bill!

THE Hayes & Wheeler ward clubs are drilling preparatory to a grand street parade, report says season. The solemn young men and pensive young this evening—but of the time we are not positively informed. They will appear in uniform.

> Hon, Joseph H. Kilbourne, reform candidate for congress, arrived in the city on Wednesday evening last. Last evening he addressed the people of Michigamme, Monday evening he will speak at L'Anse, and from thence make a tour of the copper

the council chamber next Wednesday evening. We which will effect the interests of the electors, but it is just as well for them to be on haud.

THE Chasseur's dance came off Thursday evening. notwithstanding the rain, and a very pleasant time was had by the few who ventured out. The boys entertained the ladies with a short exhibition of the manual of arms and nothing occurred to mar the pleasure of the evening. Don't forget them at their next one which takes place in two weeks.

Our republicans friends elevated the topmast of their Haves and Wheeler pole, in front of the Opera house, on Wednesday last, from the topmost peak than three nights in a week, and not to stay later of which now floats a very neat streamer bearing than one o'clock A. M. This going seven nights in the names of their presidential candidates. They a week and sitting up till three in the morning ruins have also erected another pole in the fourth ward,

> MR. A. MATHEWS, of the firm of Mathews & Longvear, has accepted the position of fire warden, and asks the co-operation of citizens generally, in ing of any unsafe chimneys, or any other exposures to fire, are requested to call at his office, No. 2, and the dangerous habit of keeping ashes in wooden receptacles is positively forbidden. It will be well putation will be necessary. for every one to look well to their flues and all guards against fire before being personally requested to do so by the warden.

fame of our city, and we should like to see some effective measures taken to render this climate unof an embryo circuit judge.

DISCORDANT NOTES.

Jangle and discord, each Sabbath morn. From the bells that need but a master hand ; For the music ceased, and in silent scorn, Passed with the ringer to a distant land.

And the low, sweet chime of Sabbath bells Is lost in discord and horrible din Just as a life will grow cold and hard, If hope and love are silenced within.

Then oh for the grasp of a master hand, That the clanging sound be forever hushed. Then oh, for the touch of Hope's magical wand. To lighten the darkness in hearts that are crushed J. D. H.

ISHPEMING, Sept. 4th. GLAD OF IT .- Rev. B. F. Fleetwood has recently received and declined a second time a most tempting call from Joliet. It was tempting in a double sense-increased salary, and from the fact that his nearest and dearest relatives reside in Chicago, only forty miles distant from the field to which he was called. We are more than pleased to know that Mr. F. is so attached to the people of the parish here, that he can resist the temptation of a call to a (temporally) more lucrative field; and we are rejoiced to know that the affection which abides in his heart for the people of his church here, is fully reciprocated by them. The good work he has accomplished for the church here will live long after he has passed away—a monument to his untiring christian zeal and devotion.

and Kalamazoo on yesterday.

having returned from the big show, and a visit glad to know she has enjoyed.

spent most of the summer with us, left by boat for below, this week.

CHANGE OF TIME.—The steamer Ivanhoe, of Hoar's line, running between L'Anse and Houghton in connection with the railroad, has made a change of time, by which passengers for the copper country leave L'Anse at 9:45 A. M., instead of 6:15 P. M., as heretofore. She leaves Houghton at 6 o'clock A. M. and makes close connections at L'Anse with the railroad for Chicago and all points east, and passengers and mail go right through as usual. Passengers from the copper country thus get a through connection for the east, although those bound up the lake lie over one night at L'Anse and go forward in the morning. The connection is broken but one way-that is, for westward bound passengers-and although this new time is not as favorable as the summer arrangement. it is vastly better than the schedule of previous years, by which mails and passengers were delayed THE adjourned school meeting, as will be seen by 24 hours going in either direction. No change in advertisement in another column, will be held at | time of trains has been made; in fact any change have no knowledge of any business to be transacted to the old situation of a delay going either way of and Wossner. from 12 to 24 hours. We notice that the Iron Her-

PERSONAL.-During the past week or ten days there has been visiting in this city a man whose career deserves more than a passing notice. We allude to Maj. John Beedon, at one time harbor master of this port, and now a resident of L'Anse. in his auricle. Those chaps up there don't take any him a ticket and started him on his way a Fifty-one years ago the major came to Michigan, winner. A constable, however, boarded the then a territory, and settled in Wayne county, on the sight of the now prosperous village of Plymouth, about twenty miles from Detroit. Being a carriage maker, by trade, he established himself in business at that point. At that time there were only about teen hundred dollars of his hard and honestly wit of habeas corpus, and by his order released from ran high. The two parties were known as Masons and anti-Masons, and many of our readers will reas it were, to Buffalo, and the heart of the noble | Monsghan, another of the party, was arrested on | member the bitterness of those times. On the

zens falled to agree. Before a new trial could be twenty-five, and so violent were the passions engenhad, the important witness in the case was dered by the discussion of the issues of the day, spirited away, and the quartette are again gentlemen | that he, upon one occasion, had to defend himself against a man who was bound to injure and abuse him on account of his opinions. It was quite a fellows—they expect to win, or they wouldn't bet; sanguinary affair, and he says he wore a bloodybut we do have some regard for the good name and shirt for the first time on that occasion. We know little of such bitter times in politics now. Mrs. Beedon, who accompanied her husband to this healthy for these card manipulators. We wouldn't | western wild, was celebrated for her industry and | Bradley, M. D., late county physician, for services of like to see any violence used, but we can't help many virtues, and was said to be one of the best said Bradley as county physician for months of July and thinking that a gentle hint from a well organized looking women in the territory at that time. She vigilance committee would be more effective than earned more money with her needle for the first two nadams will get something which will make him the uncertainties of the law, or the idiosyncrasies years than her husband did with a chest of tools. The major participated in what is known as the "Toledo War" as a paymaster with the rank of first lieutenant. In this war Michigan lost the Maumee swamps, where is now the city of Toledo, and gained the Upper Peninsula, which was a splendid bargain for her. He also was engaged in the Blackhawk war, after which he received the title of major. In 1845 he was appointed farmer to the Indians at L'Anse, and at once entered on the performance of his duties. His wife and family followed him a year later. He remained in this position for a period of nearly six years, and then accepted the appointment of manager of the Iron City copper mine, situated about five miles from Copper Harbor. To this position he was indebted to the late lamented Simon Mandelbaum, who was always his fast friend and patron. He did not remain long at this point, but removed in about a year to the Fulton mine, eleven miles from Eagle River. Major Beedon has resided on Lake Superior for thirty-one years, and was justice of the peace in the state and territory for twenty years, besides holding various other important offices. There is probably not another man on Lake Superior who more thoroughly enjoys the respect and confidence of all classes of citizens than Maj. John Beedon. His reminiscences of the early history of the Upper Peninsula are very interesting, and he relates many scenes and incidents that transpired in those early days that are of thrilling interest, such as narrow escapes, by land and by water, etc. His wife was taken ill of an affection of the brain more than eight years ago, from which she never recovered, and died PERSONAL.-F. M. Moore, Esq., county clerk and on the 31st of last August, in Kalamazoo. The register, returned from "below" yesterday morning. major spent the bulk of his life's savings in trying. MR. Resolved, That the tee to be hereafter allowed in ordi-

nary cases to physicians for post mortem examinations at inquests is hereby fixed at \$10.00, for one physician only; and that the coroner of this county be notified of this re-Resolved, That hereafter no bills be allowed for at-

endance as witnesses in any court in criminal cases ex-sept upon the certificate of the proper officer, as required by sections 7489-90 of compiled laws. Resolved, That the county clerk be and he hereby is di-rected to secertain and report at the next meeting of this board the indebtedness of this county (including out-standing and unpaid county orders) as near as may be.

Resolved, That committee on the poor be and is hereby

poor, and report to this board at its next meeting, their conclusions as to the best method of supplying medical attendance to the poor for the ensuing year. Supervisor Swineford introduced a resolution relative

to the case of Michael Ahearn and others, which was, on motion, referred to a special committee of three, to be appointed by the chair, with instructions to report at next meeting of board. Chair appointed as such committee, supervisors Maynard, Swineford and Cook. On motion of Mr. Maynard, voted that the sum of two

hundred and fifty dollars be allowed the estate of Wm. August last. On motion of Mr. Maynard, voted that the board pro-

seed to the election of a permanent chairman. Board proceeded to ballot, resulting in the election of A. P.

On motion, the board adjourned.

COMMON COUNCIL.-September 18, 1876. There being no quorum present the meeting was adjourned until September 22nd, 1876, at 7:30 o'clock P. M.

JOSEPH H. PRIMEAU, Recorder.

AT an adjourned meeting of the common council of the city of Marquette, held at the council chamber, on Friday afternoon, Sept. 22, at 4 o'clock P. M., the council was called to order by the mayor, and the rell being called by the recorder, there were present aldermen Ralph, Eddy, Fraser, Lyons and Swineford.

The reading of the minutes of preceding meetings was dispensed with. PETITIONS AND COMMUNICATIONS.

The bonds of Berdie & Heyn, Charles Gustavson, Dominique Mayerus and John W. F. Thomas with sureties, each in the sum of one thousand dollars, were presente and approved, and the bond of Frank Greenwald as retailer of malt and fermented liquors, with sureties in the sum of one thousand dollars, was also presented and approved.

The following communication from the board of water and fire commissioners, was presented, read and referred to the committee on finance, taxation and gas lights:

September 18th, 1876.

To the Honorable the Common Council of the city of Marquette.—Gentlemen: In compliance with law, we hereby report to your honorable body the amount to be raised by tax needed to meet the requirements of this board the oming year, to be as follows: department expenses.....

Per order Board of Water and Fire Commissioners.

H. E. Wanner, Sec'y. The following communication was also presented, read

and referred to the committee on finance, taxation and To the Common Council of the city of Marquette.—The undersigned citizens of said city represent that during the recent fire on Ridge street, near the cemetery, owing to the long delay in obtaining a sufficient force of water to be of any service in extinguishing the fire, it appeared absolutely necessary to prevent the further spread of the fire, to tear down or remove a small house belonging to George Ogston, which stood close to the burning building. For that reason it was tipped over so as to make a breach in the row of buildings. To raise it again and repair the damage will require an expense of from fitty to seven; five dollars, which said George Ogston, on account of siekness in his family, which has rendered him destitute of means, is unable to raise. We therefore ask your honorable body to make such appropriation as while repair the house, a measure which we besieve to be justly, as well as legally due him.

Dated, September 22d, 1876.

The street committee, to whom was referred the communication of A. R. Harlow, in regard to 100 feet taxed a second time and sold by the recorder to Mathews & Long year on account of the re-macadamizing of Superior street, from Fourth street west, made written report recommending that the recorder be, and he is hereby authorized to craw an order for \$46.15 in favor of Mathews & Longyear, and to have the deed which they hold cancelled -which report was unanimously adopted by the vote of the council taken by yeas and mays.

The committee on streets, to whom was referred the petition of James Maloney, John Donor and Jesse Hapgood, asking for a rebate of taxes, asked and were granted further time to consider the matter.

The committee on police, claims and grievances made written report recommending that the following claims be allowed and ordered paid, and the recorder authorized to draw order or orders for the same, by the unanimous vote of the council, taken by yeas and nays:

etc...... 73 60 REPORTS OF CITY OFFICERS. The city recorder made written report, showing that

from the first of September to the 22nd inst. he had collected no money from any source whatever; which report was adopted and ordered placed on file. PRESENTATION OF ACCOUNTS. The following accounts were presented, allowed and or-

dered paid by the unanimous vote of the council, taken by yeas and nays, the recorder not voting on the allowance of his claim :

Bill of Joseph H. Primeau, salary as recorder and han to jail.
Bill of James Pickands & Co.; nails, etc., for street commissioner.

Bill of Oliver Newton, assis ing surveyor.

Bill of Marquette Gas Light Co., replacing glass and repairing street immps on renewal of con-

The following account was also presented and referred to the committee on police, claims and grievances : Bill of Thomas McLaughlin, for keeping order Sept.

MOTIONS AND RESOLUTIONS. Alderman Fraser presented the following resolution which was adopted :

Resolved, That the committee on finance, taxation and gas lights be and they are hereby requested, to present to this council a report recommending the amount of tax required to be raised for all city purposes for the ensuing year, on or before the 28th inst. Alderman Fraser presented the following resolution which was adopted by the vote of the council, taken by

yeas and nays, alderman Ralph voting nay, and the balance of the council voting yea: Resolved, That the city recorder be and he is hereby au-horized to draw a city order in favor of the Marquette Brownstone company for four hundred dollars, when they present its tax receipt paid in full for 1875, one-half of said sum to be deducted from the water tax.

On motion of the recorder, the office of fire warden of this city was declared vacant. Thereupon, on further motion, Abram Mathews was unanimously elected as

fire warden of said city. On motion, the council then adjourned. JAMES PICKANDS, Mayor.

JOSEPH H. PRIMEAU, Recorder.

e who will give of my wife and n, the last day of Canada. She is a rather dark comnce. My son is a of age. The rerecovery of the . Address

A SEASIDE INCIDENT.

"Why, Bob, you dear old fellow,
Where have you been these years!
In Egypt, India, Khiva,
With the Khan's own volunteers!
Have you scaled the Alps and Andes,
Sailed to Isles of Amazons?
What climate, Bob, has wrought the change—
Your face from brown to bronze!"

She placed a dimpled hand in mine,
In the same frank, friendly way;
We stood once more on the dear old beach,
And it seemed but yesterday
Since, standing on this same white shore,
She said with eyelids wet:
Good-bye. You may remember, Bob,
But I shall not forget."

I held her hand and whispered low:

"Madge, darling, what of the years—
The two long years that have intervened
Since, through the mist of tears,
We looked good-bye on this same white beach,
Here by the murmuring sea?
You, Madge, were then just twenty,
And I was twenty-three."

A crimson blush came to her cheek.

"Hush, Bob," she quickly said;

"Let's look at the bathers in the surf—
There's Nellie and Cousin Ned."

"And who's that portly gentleman
On the shady side of life!"

"Oh, he belongs to our party, too—
In fact, Bob, I'm his wife!

"And I tell you, Bob, it's an awful thing
The way he does behave;
Flirts with that girl in steel gray silk—
Bob, why do you look so grave?"
"The fact is, Madge, I—well—ahem!
Oh, nothing at all, my dear,
Except that she of the steel gray silk
Is the one I married last year."

A WOMAN'S STRATAGEM. AN EPISODE WITH A BURGLAR.

In the second year of the late civil war I was In the second year of the late civil war I was married and went to live with my husband in a small village on the Hudson, some fifty or sixty miles from New York. The house we occupied was a large, rambling mansion of considerable antiquity for this country, and stood a little apart from the rest of the village, surrounded by broad fields commanding a glorious view of the river and fields, commanding a glorious view of the river and the hills of the Highlands. It had been built before the Revolution by my husband's great-grand-father, and though destitute of so many "modern improvements," was still a comfortable and pleasant residence.

My husband was a lawyer and a large real estate owner in the neighborhood, and at the period at which I write was greatly perplexed, like many other persons in the north, by the perilous state of the times, and especially about the suspension of specie payments. The great rise of gold and the military disasters in Virginia made it almost impossible to tell where it would be safe to deposit or possible to tell where it would be safe to deposit or

to use one's money in any large amount.

In the course of his transactions in real estate it happened one day that he received what was for us then a large sum, about ten thousand dollars, which he brought home and placed in my charge, telling me at the same time that he should have to be absent during the evening, attending to some business on the other side of the river, and would

not be home till midnight. "You can place the money in the safe, dear," he said, as he gave it to me, "and to-morrow I will try and find some way to invest it securely."

woman who fulfilled in our modest household the eyes suddenly upon him.

As he walked softly toward the safe I did partly functions of cook and m for a great many years done in the family of my own parents, who on my marriage had yielded her to me as a valuable part of my dower.

think any one could move more deliberately than Dinah did, that is to move at all. And by a wonderful dispensation she seemed to feel that whatever her other faults might be, she was strong on the point of locomotion. For when she had been moving with a ponderous slowness almost maddening to a person of ordinary quickness, one of her favorite expressions was, "Well, Miss Lillie, what shall I fly into next?" How she would accomplish all she did the brownies only know. We used to sometimes almost tremble when there was any special hurry about our domestic arrangements, and yet Dinah always managed to bring affairs to a consummation just when a minute more would have ruined everything, and with undisturbed front, would slowly enunciate, "Well, miss, what shall I

It was nearly dark when my husband departed, and after giving my orders to Dunah, or rather my suggestion, I left her and made the tour of the house, to see that all was safe and properly locked up. This duty attended to, I went to my bedroom, intending to pass the time in reading till my hus-

band should return. It was a large room on the ground floor, with two French windows opening on a broad veranda. The windows were draped with long, yellow silk curtains, between which the moonlight faintly entered, dimmed by the shadow of the roof of the plazzi and partly intercepted by the tringe of wood-bine which hung from it. My bed stood with its head about halt a yard from the wall. It was an old-fashioned structure, hung with yellow silk like the windows, but I slept with the hangings drawn back and fastened to the head-board. The bed was so large that no one would have ever thought of moving it, except in those seasons of household panic called house cleaning, when the combined strength of four men was called into requisition to draw it into the middle of the room. So elaborately carved was it that it want by the arms of World was it that it want by the arms of World was it that it want by the arms of World was it that it want by the arms of World was it that it was a by the arms of World was it that it was a by the arms of World was it that it was a by the arms of World was it that it was a by the arms of World was it that it was a by the arms of World was it that it was a by the arms of World was it that it was a by the arms of World was it that it was a by the arms of World was it that it was a by the arms of World was it that it was a by the arms of World was it that it was a by the arms of World was it that it was a by the arms of World was a by the arms of was a by th carved was it that it went by the name of Westmin-ister Abbey in the family. At one end of the room, at no great distance from the bed, was a large safe built into the huge chimney of the mansion, with a door high enough for a person to enter standing upright. Here I was accustomed to place, every evening, our silver plate, on shelves which extended around the side, on which also were placed boxes containing papers and other valuables. Opposite the foot of the bedstead, between the windows, was a mirror, running from the floor almost to the was a mirror, running from the floor almost to the ceiling. Like all other furniture in the room, it was old and handsome. How many happy scenes it had reflected in the hundred years it had stood there. The night was exceedingly hot, and I therefore left the window open, though I drew the curtain before I seated myself at the table in the middle of the room, lighted the candle and began to read, in order to pass the heavy time before the return of my husband.

After a while, I heard the clock strike nine, at

After a while, I heard the clock strike nine, at which hour Dinah always went to bed. Her chamber was in the attic, in the third story of the house. Remembering some matters about which I wished to speak to her, I started hurriedly up and went into the entry to intercept her before she got up stairs. I had to wait about a minute before she came, and our colloquy continued three or four

minutes more.

When I returned to my bedroom, feeling somewhat tired, I resolved to go to bed, as at that late hour in the country it was quite certain that no visitors would call, and my husband would let himself in with the latch key, which he always carried. I thought, however, I would try to keep awake by reading, and accordingly placed a light stand and the candle at the head of my bed. The key of the safe I placed, as usual, under my pillow.

After perhaps half an hour I grew quite weary of the book, and quietly laying it down, remained some minutes meditating with my eyes fixed on the mirror opposite the foot of the bed, in which I could see myself reflected, together with the yellow minutes more.

mirror opposite the foot of the ber, in which I could see myself reflected, together with the yellow silk curtains behind. I was thinking not unnaturally, how pretty I looked and how happy I was with such a loving husband and such a large sum of money secure in the safe, when suddenly I saw in the mirror a sight that made my heart stand still. A hand appeared between the curtains, drawing them slowly apart, and grasping cautiously the headboard. It was a man's hand, large and coarse and dark, as if belonging to a mulatto, or to one greatly tanned by exposure to the weather.

My first impulse was to start from my bed, and scream for help. I repressed it by a strong effort of

scream for help. I repressed it by a strong effort of will and lay perfectly motionless, except that I par. Fitter and Plumber, Marquette.

tially closed my eyes, keeping them only sufficiently open to watch the mirror. As quick as lightning my mind took in the situation. In the few minutes of my absence from the room, while talking to Dinah in the entry, a thief, a robber, a possible murderer, had stolen up the plazza window and hid himself either under the bed or behind its draped head. He was doubtless armed: and, if I cried out himself either under the bed or behind its draped head. He was doubtless armed; and, if I cried out and attempted to escape, he could easily reach the door before I could, and, for his own security, would probably put me to death. Dinah was too distant and too feeble and clumsy to afford me any assistance, and besides was by this time fast asleep in the third story. The man doubtless know that in the third story. The man doubtless knew that my husband had that day received a large sum of money, and had gone off across the river, leaving me alone in the house. He had entered the house caring only for the money, and anxious above all things to escape undetected and unrecognized. If I revealed to him that I was aware of his presence, I would expose myself to murder, and perhaps to outrage worse than murder. My obvious policy was to keep quiet and to feign sleep. I thought also of the money, and was not altogether willing to resign that without an effort to save it, and to have at least some clew to the identity of the thief. I confess, however, that this consideration was not a very strong one, and, I am afraid, that if I could have seen my way clear to an escape from the room and the house, I (should have fied incontinently, without stopping to see more than that terrible

A moment which seemed an hour passed while these thoughts rushed through my mind. I lay perfectly still, with my half closed eyes watching the mirror. Slowly and noiselessly the frightful hand pulled up its owner, until I could see the head and face reflected in the glass, and glaring at me with fierce yet wary eyes. The man was a mulatto, very dark, with evil passions written in every lineament. I could scarcely refrain from shuddering at the sight of his hateful visage, and speedily closed my

eyes to shut it out. I was not quite ready for the ordeal through which I knew I must soon pass. I wanted to move my light stand a little out of the way and so arrange the bed clothes that I could spring from the bed without any impediment. I therefore gave a little sigh and moved as if about to awake, slightly

opening my eyes at the same time. The head and hand instantly disappeared. I then composedly made the desired changes in the position of the stand and the arrangements of the clothes, put my watch with the key of the safe under my pillow—so near the edge that they could be easily taken out as I knew they would be extinguished one of my candles said my would be-extinguished one of my candles, said my prayers, and closing my eyes resigned myself to my fate, with no very sanguine or definite hope of extrication from my perilous position.

I made my breathing regular, and a little louder than when I was awake, and lay with my cheek on my hand counterfeiting sleep. At last the stillness became more terrible than even my first agony of fear. Several times I fancied that I heard a soft step approach from the place of concealment. As often I was deceived. Then again that dreadful stillness, in which I counted the ticks of the watch through the pillow. It was a positive relief when he came out from behind the curtain, stoppe lat the he came out from behind the curtain, stoppe lat the table and stood looking at me, as I was well aware, though my eyes were closed. I forced myself to breathe regularly and audibly. He came closer; he bent over me. He passed the lighted candle slowly before my face two or three times. I felt the heat and saw the light through my closed lids, which must have quivered, though he did not seem to observe this motion. Heaven gave me strength not to cry out. Satisfied apparently, he put back the candlestick on the stand and his hand crept softly and slowly under the nillow, and one by one he re-So saying he stepped in the buggy, which was standing at the door, and drove away, taking with him our hired man Silas, leaving me with no one in the house but Dinah, an old colored with no one in the house but Dinah, an old colored long looking at me that I felt impelled to open my

open them, and cautiously watched him through my eyelashes. I heard him tumbling with the lock, and once he looked over toward the bed. My eyes were Dinah was indeed a character. She was tall and very stout, weighing, she would never tell how much more than two hundred pounds. She was the safe, and go back to the stand for the candle, very black, and as lazy as she was black. I don't withdrawing the key from the lock.

Here was the opportunity for which I had waited, I sprang lightly from my bed, with one bound reached the safe, dashed the door to, turned the key, and with one long shrick fell postrate and senseless to the floor of the dark room

How long I lay on the floor I do not know, probably for a few minutes only, but I was unconscious. It seemed, when I came to myself, as if the interval had been a long one. I was aroused by his blows upon the iron door and found myself weak after the long tension, but still calm. I remember the pleasure with which I thought, while I lay there, that he could not escape, mingled with vague and foolish dread that he might in his rage burn the valuable contents of the sale. He struck the door and swore tearfully on finding himself entrapped. But as I took no

notice of his outcries, he soon grew quiet. Presently I rose, and lighting a candle, dressed myself with all possible haste and with trembling fingers, turned often to look at the safe, from under the closed door of which I more than half expected to see blood trickling; why, I cannot tell, except that my mind was full of images of horror. I was

I had no means of ascertaining the time, as he had my watch in his pocket and there was no clock in the room. Taking the candle I hastened to arouse Dinah, who, as I shook her, slowly opened her eyes, and with scarcely any more than her usual slowness pronounced her formula: "Well, Miss Lillie, what shall I fly-Lord a massey! what's de matter wid de chile? You ain't seen a ghost, have you, honey?" "No, Dinah; but I've seen some-thing worse than a ghost. I've caught a robber, and he is in the safe. What time is it?" and looking at the clock, that ticked slowly and deliberately
—as how could Dinah's clock help doing?—I saw to my great relief that it was nearly midnight.

A moment more, and my husband was in my arms, listening in amazement to a rapid narrative of my singular adventure. I would not suffer him to open the safe until Silas had summoned assistance from the neighboring houses. I feared that my desperate prisoner might still escape. When the safe was opened, there sat my burglar on the trunk, half stupefied for want of air, a knife in one hand, the package of money in the other, and the

burned out candle at his feet. The look of rage he gave me on coming out of the

CMOKY CHIMNEYS CURED!

"GOTHIC"

Ventilator & Chimney Top

Has proved a complete success in curing the most obstinate, sluggish and smoky chimneys. It stands on the top of the chimney and does not require a smoke stack to carry it above surrounding building. The ONLY CHIMNEY TOP that will work satisfactorily when surrounded work satisfactorily when surrounded by high buildings. For ventilating elevators, machin-shops, railroad depots, car shops, &c., it is unrivaled.

soon to be put on. WM. UREN is soon to close out his saloon business and is to remove to the Parsons mine which he

has recently leased. THE latest reports from Utah state that Capt. Johnson has struck a bonanza of immense magnitude out there.

D. F. WADSWORTH has some very humorous insurance advertisements, on which is inscribed a very ludicrous picture of the presidential race.

A NORWEGIAN, by the name of Burnt Wagon, accidentally broke one of the large panes of glass in the front of the Nora store on Monday; cause, JAMES TOBIN, who left here some time ago for

Boulder, Col., unexpectedly returned home on Wednesday. We have not heard whether he is to

when she is to return.

THE trial of W. L. Mann against Alex. Bengley came off on Tuesday of last week before justice Wendel, and resulted in a verdict for Mr. Mann. Mr. Bengley was fined 25 cents and costs.

this place for the last five years, has recently sold out his carriage shop preparatory to removing to Calumet, Houghton county, where he intends to locate for the present.

THE most parsimonious individual we have heard of in a long time is a certain M. D. who resides not a thousand miles from Humboldt, who makes his boast that he can and does live on 10% cents per day. At least so says a prominent individual from that place.

MRS. BROWN, supt. of the millinery department at Curtis, Mansfield & Prime's store, arrived home on Saturday with a large and well assorted stock of milinery goods. Ladies wishing to purchase winter hats should give her a call as she has just what will suit the taste of the most fastidious.

"A LITTLE fun now and then," etc. ; but ain't it "putting it on a little too thick" to have about four pounds of red hematite mud thrown square into your face and eyes from a horse's foot, just as you are about to tip your hat to a beautiful damsel in passing her on the sidewalk, on a fine, sunny morning?

THE Episcopalians of this place met at the residence of Wm. Sedgwick, on Wednesday evening, and organized a society for the purpose of holding divine service twice a month, at some place which they, in the future, may designate. We understand they are negotiating with the Baptist denomination with the view of leasing their church.

AT a meeting held in the basement of the Presbyterian church, in this city, pursuant to a call from Prof. Bigsby and others, the literary society, of which we made mention some time ago, was organized, with the following officers: Prof. Bigsby, president; Mrs. Hill, vice-president; Miss Rodier, secretary; Ed. McGinty, treasurer; Mr. Taylor, corresponding secretary.

THE wedding of Miss Annie E. Ewbank and Mr. J. E. Campbell, both of Berlin, Wis., took place at the Barnum house, on Sunday evening, in the presence of friends and invited guests, who numbered nearly fifty ladies and gentlemen. Shortly after eight o'clock the bridal party entered the parlors, and the Bev. Mr. Garner united the young couple in the bonds of holy matrimony. After the usual congratulations, a collation was partaken of, in honor of the happy occasion.

Ir does seem strange that our far-seeing city police cannot discover who the light-fingered gentry are whom we hear of every few days committing petty thefts about the city. A few weeks age the residence of Mr. Williams was entered, and quite a quantity of clothing carried off. And now we hear of quite a number of clothes-line thefts that have been committed in different parts of the city, during the last three or four dark nights. We next expect to hear of the sacramental robes being stolen from the churches.

made last week, is developing a very promising ap- him to hesitate until Stonewall Jackson's whole pearance. The vein is over thirty feet wide. To army came up and forced him, though not without WOOD'S DRUG STORE ascertain its quality in depth a shaft is being sunk, a desperate struggle, with heavy loss on both sides, and it is found to be a similar ore to that of the to give the captives up! Ah, boys, let's cherish the Cambria and Bessemer, which is acknowledged to memory of those absent, but not forgotten, brothers 419

Our Dressmaking Department

Is now fully equipped, under MISS C. C. JACOBS, an accomplished dressmaker, and we are prepared to meet any calls upon it. In fact, in every department of our business we are fully prepared for trade and TO MEET ANY COMPETITION. GOOD, PROMPT PAYING ACCOUNTS SOLICITED. MYERS & BIGELOW.

THE woodwork of the tower of the fire engine tained a lease. We understand that Negaunee and have discovered a deposit of good ore in near proximity to the Curry & Nelson property. Should this last discovery prove good and the owners take

measures to develop it, it will, no doubt, aid Messrs. Curry & Nelson in the speedy negotiation with the C. & N. W. Railway company to extend a branch into their mine, a distance of less than three-fourths SEVERAL weeks ago one of the publishers of the Marquette Times-a campaign sheet-was soliciting subscriptions for his paper in Ishpeming. Being a stranger, he induced one of the business men of Ishpeming to introduce him to the democrats around town. The said business man, however, introduced him alike to democrats and republicans, which caused many an incredulous smile on the faces of republicans. In the course of the day they called on a red hot republican on Main street and held the paper up to him soliciting his subscription. which he readily acceded to, thinking all the time that he was subscribing for a regular bloody s. MRS. J. J. VŒLKER, formerly of Negaunee, but paper. Pocketing their cash, the canvassers left

now of Virginia City, Nev., is here on a short visit | his house to seek new patronage, all the while wonto her friends and relations. We have not learned | dering how their guileless friend would take the matter. Time passed on, and this mislead subscriber received his first copy through the mail. Bringing it home he unfolded it eagerly, when lo ! what did he see ?-Tilden-Hendricks-Reform-Grantism-did he believe his eyes? Surely this was no republican paper. "'ere, stop a bit," cried George Desmarias, who has been a resident of he shortly after, accosting the man who got him to subscribe. "What sort of a bluddy sheet is they?" "That," said his friend, "is a red hot democratic paper." "What say ye? I hae'nd subscribed for a bloody democratic paper, eh?" "You certainly have," responded the other, "and paid a dollar to support Tilden's chances." "Just so," was the answer. The misguided man was puzzled. He was ashamed of his ignorance, but he looked as though he would like to grapple the publisher of the Marquette Times; but his rage abated and he would have forgotten it had he not received another copy next week. This was too much for him. To lose his dollar was bad enough, but to see his candidate abused in the bargain, was trying him terribly. It was lucky for the Times man that he was not in Ishpeming at that time; he would have been annihilated at once. The other day he received a third copy. During the day some one asked him to subscribe for a religious paper, and precipitate flight was all that saved him from dire disaster. But of late the pangs of remorse at receiving a paper that advocates principles which are contrary to what he is taught, are making him sad and morose. What the end will be none can tell; but if after re-

ceiving a few more copies he is found hanging

by the neck in the woodshed, driven to suicide, the

publishers of the Times will comprehend what an

awful thing they will be held responsible for.

An adjourned meeting of the Northwestern Mutual Lying association met at their regular rendezyous, baggage car No. 67, last evening. The meetwas called to order by B-n, their chief, who, in a tew well chosen remarks, chiefly conspicuous for the entire absence of truth, endeavored to arouse the enthusiasm of the mob before him. Said he "It is with feelings of regret, not to say poignant grief, that I have noticed members of this ancient and honored order so far forgetting the precepts hauded down to us from our patron saint Annanias, as to confine themselves to truth in their statements, for hours at a time! What will be the result? What dire calamity awaits our order if these unworthy disciples of Jules Verne do not take a tumble to themselves? (Forgive the slang, brothers; a too intimate acquaintance with the train "butchers" has somewhat marred my otherwise pure Anglo-Saxon.) Ah! boys, would that we could return to those haleyon days when the beaming countenance of C. J. W. was in our midst! How we would sit and listen with child-like confidence, while he related how he fought a tiger in 'Frisco in '49, single handed How the "vigilantes" strung up enough "roughs' to each lamp post to make shade trees unneces sary! And then the withering look he would give when one of us would tearfully plead with him to let up on that story one "rough," if he couldn't spare a whole lamp post of them. Again, with memory's eye I see the lamb-like blonde, "Buff.." that prince of truth-stretching, relating how he, while out scouting in the Shenandoah valley, alone, surrounded and captured a whole squad of rebel cavalry, they begging to be released on parole long enough to harvest their corn crop! How a stern sense of duty compelled him to "gather them in." CURRY & NELSON'S mine, of which notice was while his natural sympathies for a fallen toe caused

be a superior hematite. As regards its dimension in the cause for which we all labor-to spread the the length remains to be seen. There are between truth—as sparingly as possible." At this point the 40 and 50 feet uncovered at present, and good indi- chief, hearing labored breathing, looked around cations that it will continue. A fashionable dressmaker, well and favorably known all over the west, she has enlarged her business, and is now prepared to execute all orders promptly and in a style that cannot be surpassed. Orders for the purchase of dress goods may be sent to her and will receive prompt attention. Marquette ladies visiting Chicago are respectfully requerted to call on her at her place of business,

774 MICHIGAN AVENUE.

MARQUETTE, MICHIGAN, SEPTEMBER 30, 1876. All letters of a business character, as well as adver-isements and communications intended for the columns of this paper, should be addressed to "THE MINING fournal," and not the editor personally, as is often the ase. Only letters of a personal or confidential nature ase. Only letters of a personal or confi-

THE new machinery at the Bessemer mine has been set in motion, and, report says, works satisfactorily.

THE old engine and machinery in use at the Edwards mine before the fire last year, has been brought to this city, where it will be thoroughly overhauled and repaired-with a view to its use at the Rolling Mill mine, where new buildings for its reception are now being erected.

THE Shenango mine, the lease of which is now in the hands of W. C. McComber, is again quoted in our table of shipments. Mr. McComber informs us that he is raising about 150 tons per day, and that the mine looks well and gives promise of a much larger yield, when improvements under way are completed and the deposit fairly and properly opened.

THE slide at the Lake Superior mine, to which reference has been made, will to some extent diminish the production of the mine, the present year, unless the los can be counterbalanced by increased production in other pits. It is estimated that the debris can not be removed and the pit put in good shape for a renewal of mining operations in less than three months.

THE new machinery for the Salisbury min will soon be in place. It consists of two hois ing drums, four feet face, operated by a 16x3 engine-all manufactured by S. F. Hodge, of Detroit, on an order given in July last. Th Salisbury mine is owned by the Iron Cliffs com pany, and is located in section 15, adjoining the Lake Angeline. The mine now gives em ployment to about seventy-five men, and ha shipped this season nearly 15,000 tons.

THE new lessees of the Washington have already a force of over fifty men at work though as yet the pumps have not been able t clear the different pits of the accumulate water. As soon as the pumps shall have per formed their work the force will be largel augmented and mining will commence in earn est. The Washington is certainly a first clas8 mine, and with good management can be made to pay handsomely.

MR. GEO. C. REIS, of Newcastle, Pa., is in the district looking after the interests of the companies with which he is connected. Mr. R. is president of the Keystone Iron company, and also one of the principal stockholders in the Shenango. It is not improbable that there may be some litigation over the possession of the last named mine-Mr. Reis, claiming that the company has not forfeited its lease, and that those now in possession are trespassers.

THE Escanaba furnace was sold at auction sale on the 21st instant, to A. B. Meeker, of Chicago, for a consideration of \$105,000. The purchase includes, with the furnace plant, 30,000 acres of woodland, all the kilns, tenements and personal property of the company-all of which before the panic could scarcely have been bought for less than half a million. The fact that Mr. Meeker is the purchaser is in itself a guaranty that the furnace will soon be put in blast, and the Escanabaites are to be congratulated upon the prospect of at least a partial revival of business at that point.

NELSON, Curry & McVichie, who were re ported in these columns last week, as having made an important discovery of ore on lands leased by them from the Cleveland Iron Mining company, section 2, near the Bessemer, have a force of men and teams at work opening the deposit. They have also had a survey made for an extension of the Chicago & Northwestern track from the Bessemer, a distance of about half a mile, and the road will undoubtedly be built as soon as the developments at the mine render such an improvement necessary. So far the indications are most favorable for the de- sumed on the 14th instant, with a good attendance. velopment of a good mine.

Age, in which it is attempted to be shown that our mines are shipping unsold ore to the lower for young men than this. lake ports, and from which fact it is argued that the miners will be compelled to sell for less than the present prices, or that a large part of this year's product will have to be carried over till next year. We are not wholly prepared to dispute the proposition; but if our miners have foolishly placed themselves at the mercy, as it were, of the turnacemen, by mining and shipping more ore than is necessary to fill actual orders, they must take the consequences, and will have nobody to blame but themselves. We are inclined to believe, however, that the Age is mistaken, for it is generally understood here that all the ore mined and shipped has been sold, and we know it was the declared policy, on the part of some of the ore companies, to ship no more ore than might be found necessary to supply the demand at fairly remunerative

If the Age will kindly show us how ore that costs \$2.64 on the cars can be shipped to Cleveland and sold at a profit for \$5.75 per ton, we will feel under obligations!

WE reprint from the Thunder Bay Sentinel the following items: "Every day convinces us that no richer mining district than this is to be found on the continent. Yet, the more we investigate the better we are satisfied that a Philadelphia, beginning Tuesday evening. October 24th. where they are now, if they do not meet with a still great deal of wrong has been perpetrated, not The council has decided to

only against confiding friends but also to the injury of the reputation of the district. To such to extent has this been carried that it is now difficult to get capitalists to aid in worthy enterprises. We are aware of the large number of experienced miners now engaged in developing different parts of the district, but it is no part of our duty to aid in creating an excitement over real or imaginary rich mines. It will ever give us pleasure to record success in the pursuit of wealth; we admire enterprise and desire to see honest efforts rewarded. We feel that sufficient evidence prevails of the richness of this mining region, and know it is only a question of time to produce the desired result. Some very fine specimens have been taken out of the Hebert & Emmons mine, 3 miles up the Dawson road. Work is progressing with good results. Our latest accounts from Silver Islet say that a rich vein has been met on the 90th level, and the diamond drill is to be again put into the shaft to test this new encouragement. Latest accounts from the Pigeon river territory represent the interest increasing, especially at the Elizabeth mine, White Rose vein. We are expecting to be able to publish particulars at an early day. The Duncan mine and the new stamp mill are doing well. Mr. Curtis, the manager, feels satisfied that the company will soon realize a liberal profit upon the money in-

this meeting, that the members in attendance may have the better, both in the demand and price of ore. the opportunity to visit the International Exhibition Members are earnestly requested to give early notice to the secretary of the titles of papers to be read. Due notice will be given of the place of meeting. Authors of papers read before the institute are entitled to twelve copies of the Engineering and Mining Journal containing their papers. These copies will be sent on application to the office of the Journal, or the secretary of the institute, immediately on the appearance of the papers, Back numbers cannot always be supplied.

THOMAS M. DROWN, Secretary. EASTON, Pa., 1876.

THE long talked of explosion at Hell Gate, New York harbor, occurred last Sunday in the presence of half a militon people. Several tons of dynamite were exploded in the bed of the river, where some sunken rocks made aavigation extremely dangerous, and the result was perfectly satisfactory to all concerned. The people residing in the immediate vicinity entertained grave fears as to their personal safety, and many removed from their houses, taking with them their personal property, in anticipation of a general smash up, but the result proved their fears to have been entirely groundless-not even a pane of glass having been broken. The work was in charge of Maj. Gen. John Newton, of the United States engineering corps. This is considered one of the greatest achievements of modern engineering skill, and reflects great credit on the officer in charge.

LAKE SUPERIOR ORE AGAIN.

For some of our views regarding the price of, as well as concerning the outlook for, Lake Superior ore, we were soundly berated early in the season. We expressed our belief from information in our possession that the prices asked at the first could not be maintained, and that the shipments of ore would be largely in excess of the demand. To both of these propositions the ore men demurred. The prices asked, they said, were as low as the ore could be mined and brought down, and they had formally resolved not to bring down a pound that

It was not many weeks before it was proved that the ore could be sold at a less price, and it was : and but a little after it was gravely announced that all the first-class ore was sold that could possibly be mined. We gave the report for what it was worth, and though we did not doubt its truth in some cases, in others we took it cum grano salis, and expressed our belief that, while the demand would be somewhat less this year than last, there would be more ore brought down, and that it could and would be sold for less. What are the facts?

In the first place, there were less blast furnaces in blast September 1st this year than last, in the region that derives its supplies in whole or part from Lake Superior. It is true that the Cambria furnaces are using a much larger proportion of Lake Superior ores than ever before, but those that are out of blast more than balance this. The furnaces that are in blast are using a larger proportion of cinder and native ores than ever before, less use of Lake Superior ores this year than fast.

But how about the amount brought down? At the present writing, the latest report we have is to September 6th, and this shows shipments as fol-

Place From Marquette From Escanaba From L'Anse	169,253	1876. 321,024 245,099 57,819
Total	855,762	623,942

Showing an increase of 68,280 gross tons. The shipments are already within less than 300,000 tons of what they were during the whole season of 1875. If this percentage is continued through the year, the amount shipped will be over 1,000,000 tons, and unless there is a very marked improvement in the iron market a large part of this stock will have to be carried over to another year, or sold at prices | the furnaces were all small the difficulties were not below those ruling at present.

And should not ore be sold at less than the rates ruling? The way to reach a conclusion on this point is: take a fair estimate of the cost of mining and transportation to Cleveland, and see if ore can- there was an opportunity to correct it before benot be afforded at a profit at even less figures than the present rates. Of course it is not right to take the very lowest cost of mining, nor is it fair to take the highest, and the transportation rates should be those at which ore can be carried. It mines have made contracts at excessive figures, and lower ones can be obtained, the consumer should not pay all of the expense of their want of wisdom. Just what the cost of mining is, cannot, of course, be definitely ascertained. Maj. Brooks puts it at \$2.64 in his geological report. Since this estimate was made many items of cost have been largely reduced, but, on the other hand, some have been largely increased, but we think that \$2.64 per ton would be a fair estimate of the present cost of mining including delivery on the cars at the mine. One mine, and among the largest, did this work for just one dollar less than this last year, while it cost another, by reason of extra work, \$3:20 per ton.

We have more definite information as to freights. We have seen letters offering to make contracts for the season for carrying ore from Escanaba to Cleveland at \$1 per ton. The Cleveland Leader of June 6th, speaking on this subject, says:

An item is going the rounds of the newspapers con cerning the extent of the ore trade the present season, and the prices paid on charters made from Marquette and Escanaba to Lake Eric ports. The figures mentioned on new charters are \$1.50 and \$1.40 from Marquette, and from Escanaba \$1.25. From the former port they are quite correct, but from the latter port, Escanabs, instead of \$1.25, the prices paid have been about 90c., except in the early part of the season, when one charter of 30,000 tons was mentioned at \$1.18. Up to the present time not to exceed a dozen cargoes have been received at all the Lake Erie ports, and most of these were frem Marquette, on the old contracts of three and four years ago, at prices varying from \$3 upward.

The Inter-Ocean of May 27th says:

All the larger vessels running here are carrying on old contracts at \$3 per ton. They have three or four more trips to make, after which they will have to come down to \$1.50 or \$1.40, or perhaps less. Freights from Escanaba to Cleveland average \$1.25. There have been but few charters made, and those were for \$1.50 from here to Cleveland and Erie, and \$1.25 from Escanaba to same ports. Taking into consideration the fact that the larger carriers in the ore trade will soon clean up their contracts (which will not take them quite half the season), there must, if they continue in the trade, be a large amount of The October meeting of the Institute will be held in tonnage for charter, which will bead to keep freights

freights at \$1.25, we would have left, on \$6.50 ore, speculations must have been mere hypotheses, \$2.61 for profit and other charges, such as freight to Escanaba, dockage, handling, insurance, etc., ally closely approximating the truth, yet more com-

western furnaces are to run and pig iron continues | laid the foundations for still greater progress. at the present low figures, they must have cheaper ore. Some of the furnaces running on mill iron are trying to meet the emergency by using cinder, but | ical doctor of to-day as the present founder this must stop or the furnaces will be ruined. The makers of Bessemer pig have had a little margin, but if the present downward tendency of Bessemer rails continues, steel manufacturers cannot pay prices for pig that will justify present prices for ore, and if the amount is brought down that seems probable, it must either be sold less than present prices, or it must be carried to an another year, with the prospect of even less prices than can be obtained for it now .- Iron Age.

MANAGEMENT OF BLAST FURNACES.

By the management of blast furnaces is meant the actual practical charge of the working of a furnace, as distinguished from a general supervision of the entire business. Not unfrequently the manager attends to and knows but little of the practical work, leaving that directly in charge of a man known as the founder. To this practice may be due, in part at least, the lack of improvement in the practical metallurgy of iron as applied to blast furnaces. The founder, as a rule, is a man of little or no education. He has spent a series of years working in various positions around a furnace, and has learned the details of furnace management; as, for instance, the tapping of cinder and of iron, the care of forepart and tuyeres and the handling of the hot blast ovens, etc. Having risen above his fellows by strict attention and close observation, he becomes sufficiently well acquainted with the physical appearance of the slag and other indications to assume charge of the working. A good founder is a man of judgment. He knows whether the cinder being made is well fluxed or the contrary; whether the furnace is working too hot or too cold, and the usual remedies. This is about the sum of the accomplishments of the average founder. When the ore or mixture of ores employed is constant, he answers the purpose perhaps quite as well as a better educated and more intelligent man.

There are, however, but comparatively few furnaces so situated that a change of ores is either not frequently necessary or found advisable, and herein is felt the necessity of an educated and experienced even to an extent that would surprise some who manager. Experiments tried in a blast furnace are aiming to run on foundry metal, it costs fully as think they know the amount. We do not argue expensive unless guided by a scientific knowledge much as the best No. 1 X, and it would thus be a that this is wise, but it is a fact that bears directly of the material used. Even then the difficulties are on the amount of ores consumed. Even some fur- sufficiently great .. It is next to impossible to judge naces running the Bessemer pig use 10 per cent. of of the constitution of an ore by mere observation. cinder, and always use some ores that are known as A chemical analysis is not only necessary, but second class, that is, that are not guaranteed equally so is a knowledge of the value of the con-66% per cent. Now all these facts indicate a much stituents and the mode of so combining and fluxing them as to form a fusible hot flowing cinder.

> Most of the difficulties experienced in handling a well constructed and properly appointed furnace are due to errors in fluxing and combining the various ores employed. An experienced manager having a fair knowledge of chemistry would seem to be almost indispensible. It is strange that so costly an establishment as a blast furnace should be trusted to the care of a man having, at the best, only a superficial knowledge of the materials used. Under such circumstances that more or less trouble and expense should result could hardly be expected. More than one furnace has been chilled by an error in fluxing, scaffolds without number almost, and many thousands of tons of interior iron, made at a high cost, can be traced to the same cause. While generally so serious as with higher and larger furnaces. With the former the stock passed through in so short a time, compared to that required in more modern furnaces, that in case of a mistake coming too seri-usly involved. With larger furnaces the risks are much greater, and the losses incurred through ignorance in management proportionately increased We hear of furnaces working exceptionally well under charge of the old-time founder, but we are not informed of the weeks of bad working and heavy loss before the ores are sufficiently well known as to insure a fair degree of success. A turnace with all its appurtenances is rather a costly laboratory in which to determine the constitution of an ore.

The owners of blast furnaces are beginning, though slowly, to appreciate the value of an educated and intelligent manager, and while the founder may be retained, yet he will be found in a subordinate position. Instead of having the sole charge of the mixture of ores and fluxes employed, his duties will be restricted to the care of the minor details of furnace work. As the benefits of intelligent management become more widely known and better appreciated, then will the management of blast furnaces occupy the position it deserves. A position is dignified and made worthy by the man that occupies it. When intelligence assumes the practical management of furnaces, and applies the teachings of science, then, and then only, will it rank as one of the professions. Capitalists will find it to their advantage to offer such salaries as attract men of capacity and education to make it a profession of the highest and most difficult grade, requiring great skill and unremitting attention. It bears not a little resemblance to the practice of medicine. In both instances unseen forces are dealt with, and both depend largely upon the aid afforded by chemistry. The doctor deals with human bodies with all their complex machinery, the furnace manager, with crucibles and materials almost as complex in their hidden action and relations. Both, to be successful, must be intelligent and unremitting in their attention to business With the one failure means loss of life to his patient; to the other it means loss of dollars, and many of them, to his employer. Only in so far as human lives are deemed of greater value than dollars, is the profession of a doctor superior to that of a furnace manager. This distinction to many is as nothing, and some few, no doubt, would go so far in this view as to place the responsibility of the latter as the markets in which the United States manufacturthe greater of the two. thout there is a decided charge for | That medicine now holds its high professional po-

sition is due to the patient investigation and arduous We go back thus far to show that the low rates study of many sciences pertaining to it, and to which ruling at present date from near the beginning of it owes its being. Before medicine could rise superior to quackery and empiricism, it was necessary that Taking, then, the cost of mining the ore and de- anatomy, chemistry and kindred sciences should be ivering it on the cars at the mines at \$2.64, and lake thoroughly understood and applied. All previous sometimes displaying great ingenity, and occasionwhich would leave a very handsome profit, and monly so extravagant and absurd as now to be the would do so if ore was 75 cents less a ton. Of ridicule of intelligent men. So with geology. In course in this discussion the figures given are all addition to the collection of sufficient facts, an adfor hard ore, such as the Republic, Cleveland and vanced acquaintance with chemistry, botany and zoology was necessary before any of the correct in-From what we have said our readers can draw ferences could be made that have now advanced getheir own conclusion. One thing is certain: If ology to a science of great importance, and have

The leech of 200 or 300 years ago bears about the same relation to the learned and accomplished medof blast furnaces will probably bear to the manager of the future. As use is made of the discoveries of science, and the investigations thus guided make plain what is now hidden and obscure, the manufacture of pig iron will develop into a science, and will no longer be the creature of chance and guesswork that have so long made it a mystery and the subject of ridicule.

The position of furnace manager is one of great responsibility and ever present anxiety, requiring fair average intelligence and judgment, more than ordinary application, and a knowledge of the chemistry of his materials, as well as of the chemical and mechanical operations going on in his crucible. It is not pretended that a knowledge of chemistry and ability to apply its principles is all that is required to secure uniform and successful work. We assert, however, without fear of contradiction, that such a knowledge will greatly lessen the risks of iron making, and go far toward removing the uncertainty heretofore attending the manufacture of pig iron, and elevate the profession to the position

it richly deserves. Such a management was not of so particular importance while the profits on pig metal were such as to admit of wasteful extravagance and costly experiments in the mixing and fluxing of ores. Now, however, where only the closest and most economical and successful working will pay expenses, the necessity of a more extended and thorough knowledge is greatly felt, and we feel sure that the next decade will show a decided change in the personnel of the practical management of blast furnaces. As the teachings of science are more and more applied to actual practice, just so fast will the making of pig metal be taken from the realms of chance and become a profession of the highest order.

The necessity for intelligent management is especially noticed when it is desired to make only the best grades of foundry metal. The material must be of the best quality, for whatever the skill, it is just as impossible to make the best iron out of poor stock as to make good cloth out of shoddy material. Ordinarily when mill fron is made by a furnace proportion under such circumstances. When a specialty is made of mill iron, lower grades of and cheaper ores are usually employed, the coal more heavily burdened, thus cheapening the product, and there is a more considerable range in the fluxing and general management. In order, however, to run largely on the highest grades of foundry iron, the limits are narrowed; and here it is that the advantage of chemistry is mainly experienced. When the ores used are constantly the same the process is somewhat simplified, but if the mixture is changed frequently the aid of chemistry is almost absolutely necessary to secure success. We have such a vast variety of ores constantly offering, and so few in sufficient quantity, or of such quality as to be used alone, that our mixtures of ores and furnace operations are more complex than is generally the case in England and Scotland; hence the greater necessity that furnace management should be elevated to a

A practical chemist alone would not answer the purpose any more than the founder described. Practical experience is equally necessary. There must be a combination of the two. The knowledge and intelligence of the one, combined with the practical experience and acquaintance with details of the other, will furnish the most successful and economical management -E. S. C. in Iron Age.

THE PRESENT DEPRESSION IN ENGLAND .- Everybody imagines, or, at all events, everybody assumes that the reduction in English prosperity which is visible in every direction will last but a very little time. New openings will be found for investment, new channels for trade, new sources of profit, and England will rush forward again with her joyous crew of men hastening to be rich. That opinion is no doubt true, when absolutely stated, for the world is not yet exhausted of wants, or Englishmen of energy to supply them, but those who state it should state also what they exactly mean by "a very little time." A century is a very little time to a nation, and a month a very little time to an individual; and if they mean, as is probable, a time between the two, how much time do they mean? Is everybody going to be prosperous after harvest, or in 1878, or after Lord Beaconsfield has cared about Christians, or when the "kye come hame," or when? We suppose most men who talk of the lull in prosperity think it will end in a few months, and we should like to know some of their reasons, and to be certain that they are not mistaking a customary impression of Englishmen-one of the few impressions which make them happier-for the result of calculation. We also believe the time of depression will pass, but we see no sound reason for believing their profession and study. Iron making is really that it will pass rapidly, or that it cannot possibly oppress the country, diminishing comfort and deadening enjoyment, for the next eighteen months or two years .- London Spectator.

> AMERICAN PROGRESS.—The Centennial exhibition at Philadelphia has brought together such an assemblage of the products of American industry as to impress the visitor with a strong sense of the manufacturing activity of the United States. In every department of manufacture the United States are creditably represented, and the practical result seems to be that in the United States we have now powerful competitors in all branches of industry, and especially in that which we considered our own-the iron trade. Such a state of affairs deserves the attention of Englishmen. It presents to us important lessons, and in studying them we should learn, not to resign ourselves to a permanent exclusion from ers compete with us, but to estimate more justly the conditions on which business must be conducted

An even pitch of tooth ness and extravagant demands of our own workmen, our manufacturers would have been able to meet the policy of protection on very different terms. Every addition to wages, every conflict between labor and capital in Cumberland, at Newcastle, or in North Wales, made an addition to the prices at which we could place our goods in the foreign market, and every such increase stimulated the policy of those who said the true interest of their country is to have nothing to do with English goods. It may be that the American manufacturers, who have to a great extent, with the aid of protective duties, shut us out of their native markets, will be found competing with us in other countries. But English manufacturers are not afraid of competition in an open market. If they are not handicapped by their relations with their own workmen or by duties specially imposed to exclude them, they court comparison of their goods with those produced in any other part of the world .- London

Times.

CURIOUS AT PHILADELPHIA. - Among the numerous and interesting "exhibits" at the great world's fair of Philadelphia are certain curiosities illustrative of the respective regions from which they come. Thus, San Francisco sends a section of the trunk of a white oak, from one side of which projects a portion of a deer's antlers. From the age of the wood and other indications, it is conjectured that, 50 or 60 years back, a young buck, prancing wildly in the forest of Oregon, must have got one of his horns entangled in a tree, and that, the animal having perished, both horn and tree grew together. Then the northwest coast supplies a variety of Indian pottery, weapons, archæological remains, and a number of large "door posts," carved and colored in the most grotesque manner. In addition, there are models of dwellings, wood carvings abundant, with bracelets of gold and silver. Kansas forwards a singular work of art. It consists of a fac simile of the old independence bell, wrought wholly out of the natural products of the state. For example, the outer rim is composed of wheat, milfet, broom corn and sorghum, the tongue of a ponderous gourd, and the hammer of a similar plant, but bell-shaped in form. The inscription is raised around the top of the bell by means of flax and millet. A shield, forwarded by Western Virginia, is highly unique. It is formed out of many pieces of wood, in order to show how rich in timber is a portion of that state. Cut in letters on its surface are the names of the United States presidents and also of those who signed the famous declaration. The newly incorporated state of Coloradoin future to be known as the "Centennial state"is fitly represented by a collection of fauna, and a singular specimen of what is termed "the photograph rock"-a piece of stone four feet in length, upon the smooth surface of which is the representation of a pine bough, all its delicate sprays being beautifully sketched, as though by the dett hand of an artist. This remarkable delineation penetrates the specimen, which is three inches thick, plainly showing that it was originally formed by iron and lumps of silver ore from Clear Creek, each of which weighs half a ton. Finally, Wisconsin sends two portraits, one of Joseph Creete, who is alleged to have lived to be 140 years old, and who died ten years since, the other of a squaw, who is said to have attained the patriarchal age of 160 years. Such are the chief curiosities of the "centennial." -Ex.

CENTENNIAL LETTER.

[From our Regular Correspondent.] PHILADELPHIA, Sept. 27, 1876.

"Who ever saw the like?" is what everybody exclaims now. All previous accounts of the rush hitherward have failed to convey an adequate idea of its extent at this writing. The incoming trains from every direction are overloaded with human freight, and come putting into the depots behind time. The hotels are packed full from ground to attic floors, and there is a swarm of humanity blockading the streets and surging into every place of entertainment or amusement. People who intend coming in the next few weeks will do well to engage quarters in advance, if they have not already done so. The attendance on the Exhibition grounds grows larger each day, and from present indications promises to exceed the most sanguine expectations. On Wednesday, for the first time since the opening day, the number exceeded the highest figure ever predicted, being over 100,000 visitors at full rates. At the present rate of increase, with people still pouring into town from every quarter, it looks as though the attendance might reach 200,000 daily in another week. Even at the average of last week, from now till the close, would make an aggregate of eight and a half millions of visitors. Thursday was "New York day," and brought many thousand from the Empire state. Governor Tilden held a reception in the New York state building, which was thronged throughout the day. "Pennsylvania day" follows next Thursday, when the greatest throng of the season is expected. The Hon. Benj. H. Brewster will deliver an address, and in the evening the grandest display of fire-works ever witnessed on this continent has been arranged for to be supplied by a London firm.

The display of minerals in various departments of the Exhibition makes, collectively, one of the most prominent and interesting features. That portion of this exhibit in the government building is chiefly the fruit of geological surveys of the territories under Prof. Hayden and Major Powell.

Dr. Hayden's survey was begun in 1867 with a small appropriation of \$5,000, made by Congress for the examination of Nebraska. In 1869 it was extended to Colorado and New Mexico, with an increased appropriation of \$10,000. Since then, it has been going on on a large scale, and with increased usefulness until now. This year's field work will be the last, and already some of the final memoirs on special subjects have been printed. The work has been conducted in the most thorough and systematic manner, and it is surprising to compare the results obtained with the comparatively small amount of money expended. The special memoirs are, without exception, from the pens of the most accomplished specialists in the country, and the practical results of the survey in guiding the prospector and miner in their labors are beyond estimate. Among the most attractive objects exhibited are the beautifully executed photographs of scenery, by Mr. Jackson, the photographer of the survey. These are both on wood and glass. There is also a series of water-color sketches, which convey much | white inhabitant, now contains 87,000 carefully information to the geologist, besides being very selected volumes. creditable works of art. The maps, bearing dates

tails. The models of the country explored, showing, in colors, the geological structure, convey to the uninitiated a better idea than could be obtained from a library full of books. Attached to the collection are a lot of pottery of the Indians from the Mancos canyon, and models of the ruins of the Indian houses in the canyon of the Rio du Chelly as they now exist, and restored to show how they

looked when occupied. The Powell survey began by an amateur trip of Major Powell, in 1867, in the mountain region of Colorado. In 1868, stimulated by what he saw on that summer's excursion, he organized an expedition for further exploration, which continued in 1869. During these several excursions the plan was conceived to explore the canyon of the Colorado river. This has finally expanded into a detailed examination of Utah, and the reports will form a handsome series, not inferior in execution or in importance to the others being executed by the other surveys. But one volume of these reports has so far been published, though the others are under way, and a series of the maps, not yet issued by the department, is exhibited. Some of the diagrams, of which there is a whole atlas, display a high degree of ingenuity in the manner of execution, and they illustrate in a striking manner the foldings and breaks of the strata over the ducert table lands of Utah. With them there is a model of about thirty thousand square miles of the area of Utah, colored geologically, and admirably done. It would be a praiseworthy work on the part of the government to cause to be made for the national museum a complete series of such models illustrating the geology of the whole country. The necessary information exists in great part for this work in the reports of the geological surveys of the several states and territories, and but few spots would be left blank, even at the present state of our knowledge, while the surveys going on will soon supply all deficiencies. This survey also exhibits a large series of photographs.

The space originally allotted in the Main Exhibi tion building to the display of minerals and mineral products of the United States, although apparently liberal enough, was soon found to be totally inadequate, and two additional buildings were erected in the narrow area between the main structure and the street. In these are placed the special exhibits of several of the states, and numerous contributions of corporations and private parties. Some of the states have been content to present to the National Museum a series of their products, but in several cases, as for instance, Michigan, Kentucky, Ohio and Colorado, have sent other contributions, either as official state exhibits, or as coming from individuals. The Kentucky limestone, Ohio sandstone, etc., are exhibited in various shades and varieties. The new economic material, called carbonated stone, made with a carbonating process, is well shown, and gets a good deal of notice from parties interested in the subject of building materials, etc.

The Odd Fellows' parade on Wednesday was the grandest display ever made by this order. There were 15,000 in line, and the procession occupied three and a half hours in passing a given point

The hand of the colossal bronze statue, "Liberty Enlightening the World," recently sent over from France, is being placed in position to-day on the Exposition grounds, and attracts a large crowd of admirers. This statue is the gift of France to America, and when completed will stand upon an Island in New York harbor. The hand holding aloft a torch is the only portion of the statue that has been completed as yet, and shipped to this country. The hand alone is a huge monument, and towers above surrounding objects like a giant among pigmies.

How THEY MAKE PINS .- A snappish, voracious little dwarf of a machine pulls in the wire, bites it off by inches, incessantly, 140 bites a minute, and just as it ceases each bite, a saucy little hammer. with a concave face, hits the end of the wire three taps and "upsets" it to a head, while he grips it in a countersunk hole between his teeth, and lays it sidewise in a groove, where levers and springs, playing like lightning, point the pins, and whence they are dropped into a box. The pins are then polished. and two very intelligent machines reject every grooked pin. Another automaton assorts half a dozen lengths, and a perfect genius of a machine hangs the pins by the heads, and transfers them to slips of paper, and by one movement sticks them all through two corrugated ridges in the paper, when the work is finished. The pin machine is one of the nearest approaches to the dexterity of the human hand that has been invented. It is about the size of a sewing machine, which it closely resembles.

The new English eighty-one ton gun throws a bolt three feet eight inches long and weighing nearly four-fiths of a ton. The shell which it throws weighs 1,656 pounds and has a bursting charge of thirty pounds of powder.

Japan's new postal system is a success, and in nearly every town may be seen the sign in English, "Postoffice." Every postoffice is furnished with a scale of American manufacture, made by the well known house of Fairbanks.

Week before last there were extensive pur chases of Lake Superior ingot copper in the New York market, aggregating 4,000,000 pounds or 2,000 tons. This large transaction is said to have 'cleared out nearly all the stock from first hands."

Lieutenant Cameron mentions an African tribe carrying on an extensive fron trade, having foundries fitty feet long by thirty feet wide, where they frequently get from one hundred and fifty to two hundred pounds of metal at a single his den, "Shut that door!"

The public debt of France is distributed among 4,172,313 Persons. This is another evidence of the thrifty habits of the French, and helps to explain the marvel of the rapid recuperation of that nation from the tremendous losses and destruction of the Prussian war.

Among several ancient coins found lately near Jerusalem were shekels and half shekels of Judea, which are considered by many to be the most interesting of all ancient coins. They are of silver, and belong to the time of the great High Priest

The latest reports of the European crop prospects indicate a falling off in the principal be evolved on account of the circumstance. cereals, at least twenty per cent., while the root crop, which is the main stay in certain sections, is in many instances a failure, thus necessitating a large draft upon the grain-producing countries. These are the statistics of Odd Fellowship in

the United States for the last year : Number of grand lodges, 48; number of subordinate lodges, 6,395; grand encampments, 39; subordinate encampments, 1,756; lodge initiations, 50,403; lodge membership, 454,689; encampment membership, 87,450; total relief, \$1,098,868,92; total revenue, \$4,714,241,70.

MASONIC.- The twentieth annual conclave of the Grand Commandery of Michigan was held at Detroit recently, when twenty-nine Commanderies (all but one) were represented, and thirteen Past Grand Commanders were present.

The Grand Lodge of Hungary is about to found a collegiate institute for the benefit of children of members of the fraternity.

More than half of all the troubles of our lodges come from the ambition of young men to wield the Master's gavel. More than half the Masters of lodges, who are thus new to the situation, are utterly ignorant of the Constitution, the Landmarks, the Grand Lodge Edicts, the customs and the modes of government of the institution. Hence, when called upon to decide questions, they evolve conclusions from the depths of their own originality, not always too deep to be sounded, and the views of those who have had more experience are outraged. Sometimes young Masons make the best Masters, but such are only men of principle and students, and whose ambition is more the good of

the institution than personal advancement. We find the following going the round of our ex changes without its authorship being defined; but as it is of importance to the craft we reproduce it for their benefit: "One of the pithy sayings of Solomon is to this effect: 'To everything there is a season, and a time to every purpose.' Evidently it | these vehicles is also stronger and more durable was the thought of the great king that there was a fitness of time and place for all the concerns of life. If Solomon had intended to speak a word of caution to the craft he could hardly have uttered a more wholesome reminder than the sentence above quoted; and its significance still abides. There is too much promiseuous talk about Masonry. In the horse car and on the street, in shop, and store, and office, an unguarded speech is often heard respecting the doings of lodge, chapter or commandery, while important questions of Masonic procedure are discussed with as much freedom as though the brethren were gathered within the tyled precincts of the lodge room. Thus everything that is done, or proposed to be done, is canvassed in the presence of outsiders-the manner of work, the names of candidates, the disagreements and differences that sometimes affect the fraternity, which above all things are to be held as sacred as family secretsthese things are tossed about in an unrestrained speech when brethren meet each other in public places. And so, not choosing the right time and place for their discourse, Masons of this sort unwittingly bring discredit on the institution they would serve, and furnish to its enemies the most effective weapons that can be used against it. A reform is needed in this direction; there should be less street talk among Masons, more prudence in selecting the proper occasions for discussing the affairs of the institution, and a stricter adherence to the lines of secresy and circumspection marked out by the very nature of a society such as ours. Silence and secresy are to be scrupulously observed by the true

is also of the first importance. If the pitch or size of the teeth varies on opposite sides of the saw, the tool will "run," the work will be bad, and the labor of the workmen will be increased three-fold. "What is worth doing at all is worth doing well," is a proverb specially applicable to saw sharpening, and when the young workman gets a good saw, he should study its uses, reduce his sawing to a science, so to speak, and he will find that he has no tool which will more amply repay the care and thought bestowed upon it. A good saw, in good condition, requires very little more labor than to be held lightly in hand, and drawn backwards and forwards with a pliant wrist, elbow and shoulder Take, for instance, two saws, one of them fulfilling the conditions laid down, the other slightly hollow on the edge, and with teeth varying in size very considerably. The owner of the first would be able to use his saw 'a whole day with less fatigue than would be felt by the second man if he used his for half that time. The file should never be drawn back over the tooth, but should be lifted clear off the plate for the return stroke. If the saw gets wet from use in the rain or other cause, first rub it dry with shavings and saw-dust, wipe with your apron, and then rub all over with an oily rag, for a bright saw cuts easier than a rusty one.

DRIFT.

 Hell Gate was set ajar last Sunday.
 Moody will tackle Chicago to-morrow, sure. -Ear, eye, and teeth congresses are all the rage

-Tilton has written a note to the newspapers saying he is not that kind of a man.

-When Russia drops the mask, there will be a tragedy in real life amongst the nations. -John Milton reports, through a "medium," that he now regrets writing "Paradise Lost."

-The following campaign fruits are now said to be in season: Candi-dates, current rumors and banner raisin's.

-According to the Dublin Mail, the American grangers and spiritualists are, in a measure, kindred organizations!

-The days are near at hand when every editor is obliged to yell to nine men out of ten, as they enter

-School-book dealers make more money now than railroad lawyers or publishers of sheriff sales, at least, so one of our exchanges intimates, and we

-At last accounts the East river fishermen were waiting in eager expectation for the Hell Gate explosion. It had been estimated that 1,462,340,900,-102 fish would be stunned. -The supply of oysters is fast giving out in Eng-

land, and in a few years this charming bird in its native state will no longer sing its morning song along the shores of Albion's Isle. -If the Sioux band of hostile Indians under

Sitting Bull should escape into British territory, what a library of valuable diplomatic matter would

-From a careful perusal of the Chicago Times and Tribune, we are led to believe that there is go ing to be an election down in Indiana week after next, in which both parties are going to have a majority of several millions.

-Three brothers recently arrived in Chicago from the Black Hills with three hundred thousand dollars in gold dust, the result of six months' labor. This is even better than loafing around home waiting for better times, young man.

-A case of interest to physicians is reported from Milwaukee. The patient, a resident of that city, had for a long time been unable to digest solids, and on his death the duodenum-the first portion of the small intestines-was found to be ossified, or converted into bone. We do not remember to have read of a case of this kind before, and doubtless, it is sufficiently rare to make the "specimen" valuable to the medical profession. It was fortunate for the patient that there were no means by which his exact disorder could be ascetained before death, otherwise he would have been haunted by doctors, his every movement watched, and his steps dogged, in the hope that he might be comfortably killed in some alley, and his bony tube quietly ab stracted from his abdominal cavity and placed in some anatomical museum, by the side of a jar of disorganized liver and a plaster cast of an enormous

METALLIC RAILWAY CARS .- The building of metallic railway cars has been in course of experiment for some time. Steel freight cars are suggested, as they are far less in weight than those constructed of wood, thus saving wear and tear of the tracks. It is claimed that a steel car can be made weighing no more than seven tons, that will carry twice that weight of freight. If the trucks are of steel, a car of ten tons weight can be made that will carry twenty-five tons of freight. The construction of than the wooden cars. Already many iron cars are in use, and freight cars of sheet iron have been made at Pittsburgh, and the belief is expressed that the new style of freight car can be successfully constructed. But before it can be generally introduced, its cheapness in the long run must be made apparent, as that is the element, which, after all, will decide whether cars are to be made of wood. iron, or steel. At present wood is much the cheaper and most easily worked material, and it will continue to be used until iron or steel can underbid it either in actual first cost or else in the demonstration of a much greater durability, that will compensate for increased original expense.-Philadelphia Led

-Prof. Liellegg made the first experiments at Gratz that led to a successful use of the spectroscope in metallurgic operations. It was by him that the discovery was made that indications in the Bessemer flame corresponded to the different stages of the converting or decarbonization process, and established the utility of the instrument in this and other kindred operations. The Bessemer process only preceded the discovery of spectral analysis by a very short time; they were not quite coincident, but their close origin was a most valuable thing for the world—the latter is so necessary to

-During the last fiscal year we sent abroad 98, 000,000 lbs. cheese and less than 5,000,000 lbs. butter. Now, however, about 50,000 lbs, of the lest named article are sent from Boston every week, and in one week recently 647,045 lbs. were cleared from THE SAW.—One very important matter is that the the New York custom house. At this rate for a and birds indigenous to Lake Superior. The Canadian authorities have just issued teeth shall be uniform in size on both sides of the year the export of butter at these two ports would 1873.4 and 5, evince great care and accuracy in their arms to two thousand Blackfeet Indians, to be used saw. This can only be insured by care in filing, and be about 36,000,000 lbs., worth over

visiting the city should not fail to visit my FRER MU. SEUM, where can be seen specimens of all the animals

-The following is the effective horse power for different water motors, theoretical power being one: Undershot water wheels, 0.46; Poncelet's undershot water wheel, 0.60; breast wheel, 0.55. high breast, 0.60; overshot wheel, 0.68; turbine 0.70; hydraulic ram raising water, 0.60; water pressure engine, 0.80.

-A Dublin chemist, who has been investigating the subject, claims to have discovered that salt is not the cause of scurvy, as has so long been the received opinion. He considers the true cause to be the absence of potash, which substance is washed out of meat by the application of brine, and proposes as a preventive to add to the food of seamen and others using salt meat, phosphate of potash, to be used like common salt.

-The director of the mint has issued an order regarding the purchase of silver bullion for coinage at the mints. Until further notice, silver bullion in fine or unparted bars, foreign coin, amalgam, plate, etc., will be purchased at the rate of 101 cents per standard ounce at the Philadelphia and New York mints. Payment will be made in gold coin on determination of the value by mint assay, the seller paying the mint charges.

-The Hamoir process of introducing a blast into molten pig iron between the time that it leaves the blast furnace and being poured into the ingot moulds has been the subject of protonged experiment by French and Belgian metallurgists. It is now found at the Maubeuge iron works that a saving of ten per cent, on the coal for the puddling furnace is effected by the partial decarboniztion due to the blast; with the same quantity of coal two charges more are obtained per turnace per twentyfour hours.

-Asbestos is said to have been found in large quantities in the Nevada hills. The Sacramento Record Union is authority for the statement of a gentleman who has been prospecting in the vicinity of Pyramid, who reports "that there is great abundance in the vicinity that he has been exploring. The asbestos lies in the crevices of the rock over a great extent of country, looking, where exposed to the atmosphere, something like oakum. The streaks of the mineral are from six inches to two feet in width, and in many instances these small veins can be traced for two to three hundred yards."

-A gentleman recently sent his servant to a druggist with a physician's prescription and a written request for the return of the original prescription by the bearer. The druggist refusing to comply with the request, the servant returned without the medicine and without the prescription. The gentleman then wrote the druggist to inquire on what authority he based his right to retain the original prescription, which simply elicited a rejoinder that he was entitled to it by law. It is satisfactory to say that the druggist is wrong, a distinguished judge of New York city having satisfied himself after search that there is no law, in that state at least, entitling a druggist to possess himself summarily of another man's property.

-The paper of the Milwaukee Iron company was protested by the banks on the 7th inst. Several meetings of creditors have been held, without But day before yesterday she was took worse, and resulting in the relief of the corporation. The em- she kep' on sinking until evening, when she gave a barrassment is an unfortunate one, since the works are the most important in Milwaukee, and a large number of tamilies depend upon them for support. The mills are still in operation, and it is hoped the creditors will grant relief by extension of time. A statement of the financial condition of the corporation is being prepared for the information of the creditors, and until this is completed no definite action can be taken. A stockholders' and creditors' meeting was held on the 20th inst., for the purpose of consultation as to the best plan for the relief of

-Striking testimony to the superiority of American over English plows is furnished in a recent letter to the Agri-Horticultural society at Calcutta. Both classes of plows, the writer found, were easily worked by a pair of ordinary bullocks. Each turned up the soil to the depth of six inches, and there was no perceptible difference in the quality of work turned out. But the great disadvantage of the English article is that it is constructed mostly of iron; while the American plow is of wood, has a renewable point to the share, and is of simpier construction generally. The points, rapidly wear down in India, and as the English plowshare is made of one large piece, the alteration required is expensive. In the American self-sharpener the movable top not only lasts longer, but costs little to

-English railways are well built, without sharp curves, as in this country, and still collisions happen upon them more frequently than in America. Trains seeing each other at a long distance in England still often collide, because the brake system is not so perfect as in the United States, where a train was recently prevented by our brakes from running into a river through an open bridge. It is likely that to deficiency in the brake must be attributed the awful collision on the Somerset & Dorset railway. And again the British roads are deficient in safety signals. The latter improvement in that line is too expensive to be supplied extensively, and is not perfect in itself as the American automatic safety signal, which works also by a system of springs placed under the rails and communicating with dials by the side of the road, and which has been successively operated for two years upon the New York Central and other railroads in this country.

-The Columbus (Ga.) bagging factory turns out one thousand yards a day, or enough at six yards per bale for one hundred and sixty-six bales of cotton every ten hours, or 1,000 a week. The factory, nevertheless, has orders far ahead of its production. and its proprietors intend to erect another in Macon, and others are proposed elsewhere-giving the South employment and profit for what it has heretofore paid a large sum annually. The Augusta Constitutionalist asserts that "the South has really more furnaces in blast in proportion to her number of inhabitants than the North has, and very few are losing money." "The incorporators of the Gainesville, Ocala and Charlotte Harbor railroad," in Florida, "are preparing to commence operations at once." The machinery for the Atlanta cotton factory arrived September 1st. General Toombs is advocating another factory. These are minor facts that show great progress, prosperity, means, and

freedom in the South. -A material invented by M. Gollissaint Voneche, of Paris, has recently made its appearance on the German market which goes by the name of French vegetable leather, and which is manufactured in the following manner: A wadding of wool waste, or even wool itself, of uniform thickness, is laid upon a hot polished zinc plate, and a concentrated decocn of Fucus crispus, or pearl moss, or any other

fucus-like material, poured over it, and then it is pressed down between two rollers which are placed at a distance between each other corresponding with the intending thickness of the leather; after being rolled, it receives a coat of boiling linseed oil, and is then dried; lastly, the dried sheet receives a thin coating of vegetable wax, and, in order to make it supple, it is once more rolled between hot chamfered rollers. In order to produce a cheap substitute for sole leather, the slimy decoction is largely mixed with flock-wool until a thick pap is formed. This is spread over zinc plates and covered on each side with a thin layer of wool waste, then dried, and afterwards coated with boiling linseed oil, being lastly subjected to a heavy pressure between zinc plates in a hydraulic press .- Ironmonger

JUDGING STEEL BY THE EYE .- At the meeting of the American Association for the advancement of science, in session in Buffalo last week, a paper on "The Relations of Structure, Density and Chemical Composition in Steel," was read by John W. Langley. It has long been known to practical men that the appearance of the fracture of steel bears some relation to its mechanical properties, as developed in the machine shop. It has further been known in a general way that this appearance was connected with the quantity of carbon in the metal. The researches embodied in this paper extend over a period of two years, and show, first, that steel can be selected by ocular inspection alone with a high degree of precision, and that differences of less than seven hundredths of one per cent. of carbon can be certainly known by the appearance of the freshly proken ingots. Twenty ingots manufactured by Messrs. Miller, Metcalf & Parkin, of Pittsburgh, formed the material for these determinations. Second, it was shown that in general the specific gravity decreases in proportion with the increase of carbon, though there are some apparent exceptions to the rule; and third, that when the metal is hardened by being plunged into water the density is less the greater the heat to which the specimen is subjected. The paper was accompanied by extensive tabulated reports. In conclusion it was asserted that the time bad arrived when the eye had very nearly become the rival of chemical analysis in this branch of metallurgy.

Masonic.-The Freemasons of Cuba now have a well conducted newspaper organ of the craft, entitled "Boletin Official del Gran Oriente de Colon, para las Indias Occidentales." It is printed in the Spanish language, and represents both the Gr. Orient and the Gr. Symbolic Lodge.

The Gr. Orient of France has given formal recog-

nition to the Gr. Lodges of Colored Masons, so called, Ohio and Missouri. Brother James Lick, the California millionaire, it is announced, is about to erect a Masonic monument, at a cost of \$20,000 in Lebanon county, Pa.,

in memory of certain of his Masonic ancestors.

SMITH'S WOE .- He was tall and slender, and clad in the habiliments of woe. He entered the office and took a chair. Removing his hat, he wiped the moisture from his eyes, rubbed his nose thought-fully for a moment, put his handkerchief in his hat, his hat upon the floor, and said:

"You didn't know Mrs. Smith ?" "I hadn't that pleasure. Who was she?" "She was my wife. She's been sick some time kinder sudden jump a couple of times, and then her spirit flickered. Dead, you know. Passed into another world."

"So am I. And I called around to see if 1 couldn't get some of you literary people to saw out some kind of a poem, describing her peculiarities, so that I can advertise her in the paper."

"I dunno; maybe we might."
"Oh, you didn't know her, you say? Well, she was a sing'lar kinder woman. Had strong charactics. Her nose was the crookedest in the state; all bent around sideways. Old Capt. Binder used to say that it looked like the jib sail of an oyster sloop on the windward tack. Only his fun, you know. But Helen never minded it. She said herself that it aimed so much around the corner that whenever she sneezed she blew down her back hair. There were rich depths of humor in that woman! Now I don't mind if you work into the poem some picturesque allusion to the condition of her nose, so her friends will recognize her. And you might also spend a verse or two on her lame eye.'

"What was the matter with her eye?"
"Gone, sir; gone! Knocked out with a chip while she was splitting kin'ling wood when she was a

She fixed it up somehow with a glass one, and it gave her the oddest expression you ever saw. The false one would stand perfectly still while the other one was rolling around, so that 'bout half the time you couldn't tell whether she was studying astronomy or watching the hired girl pare potatoes. And she lay there at night, with the indisposed eye glaring at me, while the other was tight shut, so that sometimes I'd get the horrors and kick and shake her to make her get up and fix it. Once I got some mucilage and glued the lid down my self, but she didn't like it when she awoke in the morning. Had to soak her eye in warm water, you know to get it

"Now I reckon you could run in some language about her eccentricities of vision, couldn't you? Don't care what it is, so that I have the main facts." "Was she peculiar in other respects?"

"Well, yes. One leg was gone; run over by a wagon when she was little. But she wore a patent leg that did her pretty well. Bothered her some-times, but most generally gave her a good deal of comfort. She was tond of machinery. And then, you know, she could take it off at night and stand it on the hat rack in the entry, and go to bed with one cold foot. She was very grateful for privileges. Although, sometimes, it worried her, too. The springs 'd work wrong now and then; and maybe in church her leg 'd give a spurt and begin to kick and hammer away at the board in front of the pew, until it sounded like a boiler factory. Then I'd carry her out, and most likely it 'd kick at me all the way down the aisle, and end up by dancing her around the vestibule, until the sexton would rebuke her for waltzing in the church. Seems to me there's material for poetry in that, isn't? She was a selfwilled woman. Often when she wanted to go to a sewing-bee, or to gad about somewhere, may be I'd stuff that leg up the chimney, or hide it in the wood-pile. And when I would n't tell her where it was, do you know what she'd do?"

"Why, she'd lash an umbrella to her stump, and drift off down street's if that umbrella was born there! You couldn't get ahead of her! She was ingenious! I've known her when the baby was playing with the potato-masher to unbuckle that leg and use it for mashing. Take it by the knee and work

the joint backward and forward splendidly. the joint backward and forward splendidly.

"So I thought I'd mention a few facts to you, and you can just throw 'em together and make them rhyme, and I'll call 'round and pay you for them. What day? Tuesday? Very well; I'll run in on Tuesday, and see how you've fixed her up."

Then Mr. Smith smoothed up his hat with his handkerchief, wiped the accumulated sorrow from his eyes, placed his hat upon his head, and sailed serenely out and down the stairs toward his desolated hearthstone.—Max Adeler.

CHICAGO & NORTHWESTERN RAILWAY.

THE TRANS-CONTINENTAL ROUTE, ETC.

This great corporation now operates over two theusand (2,000) miles of its own road, and has "running arrangements" over nearly eight hundred miles of road owned by other Companies. Taking Chicago as its starting point, the various lines owned by this Company radiate north, north-west and west, like the fingers on the human hand. With one line it reaches MILWAUKEE, FOND DU LAC, GREEN BAY and MARQUETTE. With another it runs through MADISON, (the capitol of Wisconsin,) ELROY, and to ST. PAUL and MINNEAPOLIS. Another of its lines stretches far across Illinois, Wisconsin, Minnesota, and terminates in Central Dakota. Still another runs from Chicago through ELGIN and ROCK-FORD to FREEPORT, and with connections there for Galena, Dubuque, etc. Still another line of this corporation runs northwardly through JANESVILLE, FORT ATKINSON, WATERTOWN, to Fond du Lac, and beyond. However, the greatest and most important of the roads of this company, is their Omaha and California line, or as it is called, "THE TRANS-CONTINENTAL ROUTE." This line is the Foneer line between Chicago and the Pacific Coast, and was the first to connect with the great Pacific roads, and form the OVERLAND ROUTE. This line is the shortest rail line between Chicago and Omaha. The track is of the best steel rail, and is well ballasted, and as free from dust as a road can be made. The bridges are strong and durable, and all the appointments are first-class in every respect. The trains that run over this road are made up of elegant new Pullman Palace Drawing Room and Sleeping Coaches, built expressly for this line, luxurious, well lighted and well ventlated Day Coaches, and pleasant lounging and smoking cars—all built by this company in their own shops. The cars are all equipped with the celebrated Miller Safety. THE TRANS-CONTINENTAL ROUTE, ETC. tilated Day Coaches, and pleasant lounging and smoking cars—all built by this company in their own shops. The cars are all equipped with the celebrated Miller Safety Platform, and patent Buffers and couplings, Westinghouse Satety Air Brakes, and every other appliance that has been devised for the safety of passenger trains. All trains are run by telegraph, and are so regularly on time that one could safely set his watch by their arrivals or departures. In a word this GREAT LINE has the best and smoothest track, and the most elegant and comfortable equipment of any road in the West, and has no competitor in the country. It is eminently the favorite route with Chicagoans traveling west, north, or north-west, and is acknowledged by the traveling public to be the popular line for all points in Northern Illinois, Wisconsin, Minnesota, Northern Michigan, Dakota, Western Iowa, Nebraska, Wyoming, Celorado, Etah, Montana, Idaho. Nevada, California, and the Pacific Slope.

NEGAUNEE.

[The severe illness of our regular reporter will account for the dearth of items in this department.]

READ Wettstein's war-whoop, with which he supplements an astonishingly low price list, in another

HEYN & Co. are receiving their winter stock of clothing, the largest and most varied ever brought to the city.

Our people are indebted to somehody at Marquette, or elsewhere, for breaking the coal combination which has hitherto existed to the loss and discomfort of poor people. Coal is now down to prices within the reach of people of moderpte means. Who is to be credited with having accomplished so much in behalf of folks with lean purses?

PERSONAL .- E. S. Green and family have returned from a visit to the Centennial and their old home in Connecticut.

G. Jones, Esq., is again at home, after a run through Wisconsin.

E. C. ANTHONY and family are on a visit to Sault Ste. Marie. Ed. is sadly missed, and cassino languishes because of his absence.

THE event of the week was the grand torchlight procession by the democrats and reformers on Wednesday evening. We did not count the torches but should guess that there could not have been less than 800 men in line. Special trains brought large numbers from Marquette and Ishperaing, and it was certainly the largest political gathering ever seen in this place. After parading the principal streets, the procession halted in front of the speakers' stand, near the Northwestern freight depot, Iron street, where short speeches were made by Messrs. Ely, Dr. Brewster, Hon. Joseph H. Kilborne, A. P. Swineford and S. B. Needham. Mr. Kilbourne was well received, and evidently left a very favorable impression with his supporters. No interruption occurred, and the meeting adjourned at about 11 o'clock, with three cheers for Tilden, Hendricks, Webber and Kilbourne.

cents to \$1.

Gold tooth and earpicks, \$1.65.

Gold pens in pearl and rubber holders, \$3.50.

WAR WHOOP EXTRAORDINARY.

"What's the matter!" Wettstein has been asked frequently of late, "that you have entirely quit raising a rumpus in the papers. Did you find the recreation too expensive or the public too pensive to make it pan out well, or havn't you recovered from the effects of that 'address to ye ladies' yet?" Keep calm, gentlemen, Keep calm, if you please. Wettstein, as a gallant, is willing to take a back seat, but as an admirer of the fair sex, even if not of the demonstrative kind be aske odds from even if not of the demonstrative kind, he asks odds from none of you, and the many pleasant calls which rewarded his rendition of "Cling to me, little ones," repaid him more than a hundred fo d for its trifling trouble and ex-

But business before pleasure is his motto now. The true reason why he had ceased to advertise was that he was forced to the doleful conclusion and to join in the was forced to the doleful conclusion and to join in the lament of the "divine William"—

"O monstrous world! Take note, take note, O world! To be direct and honest is not safe!" It came about thusly: Excessive dread of the popular distrust against dealers in jewelry and abhorrence of the petty haggling and chaffering which this suspiciousness calls forth, had made him firm in the determination to never more details the abstraction graves and it was only when Otto

made him firm in the determination to never more deal in the glittering gewgaws; and it was only when Otto Wettstein, the Rochele jeweler, offered him all the wares he wanted, and the very best in the market, at the enormous discount of 20 per cent. from regular wholesale prices that he was persuaded to invest in the same, prinpally because this gave him the chance he wanted to wage war against the rapacity and extortion that were the prime cause of all the evils in the trade. When his agitation for reform resulted in the downfall of the exorbitant profits on iewelry last winter he was satisfied with tation for reform resulted in the downfall of the exor-bitant profits on jewelry last winter he was satisfied with his work, and thenceforward avoided all personalities and allowed his competitors a wide berth. But what was a reduction of 50 per cent. from the outrageous rates which ranged all the way from 100 to 200 per cent. With no clerkships or other incumbrances to support, and custom work more than sufficient to more than cover his light clerkships or other incumbrances to support, and custom work more than sufficient to more than cover his light expenses, Wettstein determined to rest contented with the brotherly bonus of 20 per cent, and to knock down his stock at wholesale rates until prices had reached a level somewhat in conformity with the times and necessities. He came out with a few modest little notices to that effect and expected that the simple announcement of the fact would create a furore and a wild-fire rush for the Walhalla. But again he had to make the experience that to produce the least impression whatever on the public mind, especially where an incessant fraudulent hue and cry of "selling at cost" has destroyed all confidence and aroused mistrust, alike against friend and foe, one must "blow" like a hurricane, and "blow" persistently after the dulcet fashion of a fog horn whistle, or as if to bring down the walls of Jericho or Jerusalem. So far from gobbling up his goods like hot cakes people would actually think them of an inferior stamp because offered so low and go to other shops and pay 50 per cent. more for precisely the same thing! Then he felt as if he was one "reform party" too many, and as if "Othello's occupation" was gone, and forthwith dropped the thankless task of battling with the abuses of the business, although he had just paid for about \$150 worth of pronunciamentos, war-hoops, &c., in advance, in Herald and Mining Journal." tos, war-hoops, &c., in advance, in Herald and MINING

JOURNAL!

But with the first dawn of a revival of business and the departure of the "depression" which had made unwilling saints of sinners all around, he notices an inclination to return to the jack-screwing of prices, and dropping all other considerations, he once more enters the field to wield a lance in defence of Low Profits, Artistic Work and Fair Dealing. In deciding on the above list of prices he has endeavored to be as just and impartial as possible, and to establish the true "Live and let live" standard. In some instances the profits may seem too low to make a living on, as for instance silver thimbles, 40 cts.; American watches \$14, 18 and 25; gold sleeve buttons \$1.75; best plated lockets and crosses 65 cts.; solid gold Masonic, O. F. and K. P. pins \$1.00 to 2.00; celluloid and plated sets \$1.25; 8 day striking clocks \$4.00, &c. Yet to sell low means to sell lively, and that is the next thing to making money.

low means to sell lively, and that is making money.

The above list is made up chiefly of New Goods of sterling quality and elegant patterns just purchased CHEAP.
The greater portion of this first stock, of course, went off
in a short time, without a line of advertising, and would
have done so at the poles. The remainder will be disposed of at WHOLESALE RATES.

Negaunce, Sept. 15th, 1876.

CENTENNIAL EXHIBITION,

PHILADELPHIA, PA. THIS Great International Exhibition, designed to com-memorate the One Hundredth Anniversary of American Independence, will open May 18th and close November 10ta, 1876. All the Nations of the world and all the States and Territories of the Union will participate, bringing together the most comprehensive collection of art treasures, mechanical inventions, scientific discoveries, manufacturing achievements, mineral specimens, coveries, manufacturing achievements, mineral specimens, and agricultural products ever exhibited. The grounds devoted to the Exhibition are situated on the line of the Pennsylvania Railroad and embrace four hundred and fifty acres of Fairmont Park, all highly improved and ornamented, on which are erected the largest buildings ever constructed—five of these covering an area of fifty acres and costing \$5,000,000. The total number of buildings erected for the purpose of the Exhibition are over one hundred.

THE PENNSYLVANIA RAILROAD, THE GREAT TRUNK LINE AND FAST MAIL ROUTE OF THE UNITED STATES, will be the most direct convenient and economical way of reaching Philadelphia and this great Exhibition from all

sections of the country. Its trains to and from Phila-delphia will pass through a Grand Centennial Depot, which the Company has erected at the Main Entrance to the Exhibition Grounds for the accommodation of pasthe Exhibition Grounds for the accommodation of passengers who wish to stop at or start from the numerous large hotels contiguous to this station and the Exhibition—a convenience of the greatest value to visitors, and afforded exclusively by the Pennsylvania Railroad, which is the only line running direct to the Centennial buildings. Excursion trains will also stop at the Encampment of the Patrons of Husbandry, at Elm Station, on this read road.
The PENNSYLVANIA RAILROAD is the grandest

The PENNSYLVANIA RAILROAD is the grandest railway organization in the world. It controls seven thousand miles of roadway, forming continuous lines to Philadelphia, New York, Baltimore and Washington, over which luxurious day and night cars are run from Chicago, St. Louis, Louisville, Cincinnati, Indianapolis, Columbus, Toledo, Cleveland and Erie without change.

Its main line is laid with double and third tracks of heavy steel rails upon a deep bed of broken stone ballast, and its bridges are all of iron or stone. Its passenger trains are equipped with every known improvement for comfort and safety, and are run at faster speed for greater distances than the trains of any line on the continent. The Company has largely increased its equipment for Centennial travel, and will be prepared to build in its own shops locomotives and passenger cars at short notice sufficient to fully accommodate any extra demand. The unequaled resources at the command of the company guarantee the most perfect accommodations for all its patrons during the Centennial Exhibition.

The magnificent scenery for which the Pennsylvania Railroad is so justly celebrated presents to the traveler ever its perfect roadway an ever-changing panorama of river, mountain, and landscape views unequaled in America.

The eating stations on this line are unsurpassed.

Meals will be furnished at suitable hours, and ample time allowed for enjoying them.

Excursion tickets, at reduced rates, will be sold at all principal railroad ticket offices in the west, north-west, and the set.

southwest.

Be sure that your tickets read via. the Great Pennsylvania Route to the Centennial.

WE EXCHANGE MACHINES. Send your old-fashioned, cumbersome, heavy-running, woman-killing machine to us, and we will allow you \$25 for it as part payment for one of ours.

It is celebrated for its advantages, in that it is one of

It is celebrated for its advantages, in that it is one of the largest sewing machines manufactured—adapted alike to the use of the family or the workshop. It has the largest shuttle, with a bobbin that holds almost a spool of thread. The shuttle tension is adjustable without removing the shuttle from the machine.

This machine is so constructed that the power is applied directly over the needle, thus enabling it to sew the heaviest material with unequaled ease. It is very simple in its construction, durable as iron and steel can make it, all its wearing parts case-hardened or steel, and ingeniously provided with means for taking up lost motion; so we are justified in

Warranting Every Machine for Three Years.

It is the lightest and easiest running machine in the market. It is also the most elaborately ornamented and market. It is also the most elaborately ornamented and prettiest machine ever produced.

With all these advantages, it is sold from \$15 to \$25 less than any other first-class machines.

Exclusive control of territory given to agents.

HOW TO VANQUISH THE STOMACH'S TOR-

If the enemy of mankind was permitted to exert his diabolical ingenuity in the invention of a new disease, he could scarcely devise one more worthy of his genius than dyspepsia. The dyspeptic sufferer is tormented by symptoms resembling those of almost every known malady, and is often worried into monomania by these conflicting and perplexing manifestations. A favorite, though absurd hallucination of the victim of chronic indigestion is that he or she has heart disease. Dyspepsia has often been pronounced incurable, but experience has shown that Hostetter's Stomach Bitters will vanquish it, together with the constipation and billious derangement which usually accompany it. Diseases of the kidneys and supposed rheumatic pains are also frequent concomitants of dyspepsia, but they too succumb to the above named invaluable corrective.

BUSINESS NOTICES.

FALSE IMPRESSION .- It is generally supposed by a certain class of citizens, who are not practical or experienced, that Dyspepsia can not invariably be cured, but we are pleased to say that Green's August Flower has never, to our knowledge, failed to cure Dyspepsia and Liver Complaint in all its forms, such as sour stomach, costiveness, sick headache, palpitation of the heart, low spirits, etc. Out of 30,000 dozen bottles sold last year, not a single failure was reported, but thousands of complimentary letters received from druggists, of wonderful cures. Three doses will relieve any case.

Try it. Sample bottles, 10 cents. Regular size, 75 cents.

CLOSING OUT

\$30,000 WORTH

AT LESS THAN COST!

As the present outlook for business in the Upper Peinsula is not very encouraging for keeping on hand a general assortment of Hardware, we propose to dispose during the fall and winter months, of our entire stock

COOKING & HEATING

STOVES!

Builders' and Mechanics'

HARDWARE & TOOLS,

Table and Pocket Cutlery, Shovels, Glass, Wagon Woodwork, Thimble Skeins, Guns, Pistols, Fishing Tackle, and Ammunition,

All of which we will sell at present wholesale rates, as quoted in New York and Chicago markets, making only a small addition to the cost to cover freights, our intention being to withdraw from the business, and close out our entire Hardware stock at prices much below the original cost at which we purchased.

While we do not intend to add to our stock now on hand, we will order from manufacturers anything in our line not on hand, charging only a small commission, which will make the cost much below the retail prices at which the same can be obtained elsewhere.

This advertisement is not intended as a catch for the purpose of effecting sales of an accumulation of worthless goods, for our stock is good and saleable in any but such a time as this, but is what it purports to be, a closing out sale, which fact we will fully demonstrate to any who will favor us with their patronage.
