

Miner's Journal

By A. P. SWINEFORD & CO.

Devoted to the Iron and Industrial Interests of the Country.

MARQUETTE, (L. S.) MICHIGAN, MAY 20, 1882

THREE DOLLARS PER YEAR.

NEW SERIES, No. 722.

A. P. SWINEFORD,
A. HORNSTEIN,
ESTABLISHED IN 1846.

The weather is warming to its work at last.

JAS. E. DALLIRA, Esq., is home from his trip south and east.

STRAWBERRIES are a drug in the market here, but it's the price that makes 'em so.

A SERVICE of song will be held at the Baptist church to-morrow evening, to be conducted by members of the Y. M. C. A.

STAFFORD'S drug store has taken on its summer coat of paint in front. Even the drugs inside look fresher in consequence.

We are requested to announce that services will be held on to-morrow at St. Paul's church, morning and evening, as usual.

MR. MATTHEWS, the real estate man, with his wife, left for Cincinnati yesterday, on a trip partly of business and partly pleasure.

CONSIDERABLE gardening is being done about the city by persons so fortunate as to have the requisite plot of land in their possession.

A NEW harness-making establishment now occupies the basement under Dolf's hardware store, recently vacated by the knitting factory.

SEVERAL places are undergoing repairs in several places throughout the city, where their condition calls for it. We take pleasure in noting this.

A MEETING of the Marquette Chasers will be held at the armory Tuesday evening next for the purpose of re-organizing that company of dauntless warriors. The picnic season is at hand.

EDITOR BISSSELL, of St. Ignace's city and only newspaper, was in the city early this week. He spent a spare hour in the MINING JOURNAL's sanctum, where he is always a welcome visitor.

We haven't had a real soaking rain yet this spring. What is better, we don't care to have one, excessively. A nice, gentle shower would be acceptable, but we had "old soakers" enough last fall to answer for a term of years.

RAILROAD men at this point are earning their bread by the sweat of their brows for about eighteen hours out of the twenty-four, now excepting on Sundays. There is no rest for the weary railroad employe in this section while the shipping season lasts.

MARQUETTE is enjoying a remarkable immunity from destructive fires of late. There hasn't been a blaze of any note here for over a year. Can the high rental which all sort of buildings are bringing be taken as an explanation of this?

HAGER & JOHNSON are selling wall paper by the ton this spring. The rage for household decoration has seized upon Marquette housekeepers with unexampled virulence. The designs are so very tasty and rich that it doesn't surprise us to see the ladies go into ecstasies over them.

A NUMBER of shade trees set out in front of the new hose house and Marshall's residence gives both these buildings a cool, sequestered air, suggestive of comfort for their occupants in the coming dog-days. A new fence will soon add to this effect of the trees, by setting the property off from the street.

REV. M. FRYKMAN requests us to announce that the Swedish Lutheran church meeting, announced to take place Wednesday evening next at the German Lutheran church, has been postponed one week, to Wednesday evening, May 31st, at the same hour and place. Those interested will please bear this in mind.

TROUT have commenced running in the streams hereabout, a circumstance which induces lovers of the sport of catching the speckled beauties to take up the practice of digging for worms where they left off last fall, following that exercise by taking long walks to gather in a small amount of fish. Still it's sport—so vouched for in the guide books.

THERE'S no use of saying anything more on the hotel question this season, is there? The MINING JOURNAL has talked itself hoarse in advocacy of the project, but, it would seem, without bringing conviction to the stubborn hearts of the city's property owners. It yields the floor to the summer tourist, who will be here and heard from presently.

MR. PETER WHITE, accompanied by his wife, daughter, and Mrs. Mather, left Thursday on a trip south and east, their objective point being New York city, where the party will receive an addition in the persons of Mr. and Mrs. Jopling, now on their homeward voyage from abroad. The reunited family will then return to Marquette, and will reach here about the 27th.

ALL the pockets on the ore dock extension are now supplied with chutes and doing service. This addition to its dock enables the railroad company to load vessels so rapidly that no time is lost waiting in this harbor the present season. Vessels can take on their cargoes without an hour's unnecessary delay, an advantage of immense consequence when the shortness of the shipping season is taken into account.

A MOST agreeable change in the temperature set in Monday, since when it has been delightfully warm and bright. Vegetation has felt the quickening influence of the grateful warmth, and nature is beginning to put on her livery of green, trimmed with rare and dainty flowers, like a maiden decked for the bridal. [We don't often do this sort of thing, but when occasion demands a little dab of word painting we're just boss.]

CINDERS.

The bicycle plague is spreading rapidly in this country, an exchange notes. No wonder—travels on wheels.

Milwaukee has proportionately its share in the bicycle craze of any city in the United States. Nearly all the males there are Ho-brokers.

Pennsylvania's republicans have nominated one Beaver to head their state ticket, and the democrats there boast that they are going to make his fur fly in the canvass.

A minister at Blissfield in this state is making a name for himself by putting up for him should be a paragon or a coach-house.

The Washington despatches inform us that "the house passed the National bank bill Wednesday." The house must be growing honest. 'Tis a wonder that some of the members didn't pocket it.

The "dash" company didn't open up here, as advertised, this week. Rumor informs us that the manager has lost the "combination"—hence can't get hold of the cash requisite to meet bills contracted here and elsewhere. This is too dashed bad!

Our army out west is beginning to do some brilliant service. It has killed a number of cowboys last week and shot them to death, without losing a private by death or wounds, or an officer by flight. West Point discipline tells, after all, when it has a fair chance.

A Chicago man claims to be able to make gas by the use of his invention at a nominal cost, but don't kick out your coal gas meters just yet awhile. Like as not his plan will resolve itself into very ordinary, wholly unproductive of illuminating properties, on investigation. He probably mixes the water with whisky.

Cinders begs the public to remember that the Johnnie Davenport with Beckett's circus isn't the one whose performance and the political rings of New York have made the name odious. This Johnnie Davenport is a circus man and a Christian, who never had a bad act—a circus—in his life. That he has to go through life burdened with a name that the other fellow has rendered infamous is his misfortune, not his fault.

The Schoolcraft County Pioneer, commenting on Don Henderson's refusal to be a candidate for secretary of state, observes that he "is the editor of a paper that brings him honor than any other in the county. He edits a 'patent-inside' weekly in an insignificant lower peninsula town, Cinders regards this as more of a slur on the state than a compliment. Wonder which way the major intended it?"

President Arthur's dinners are said to eclipse in elegant profusion those of any previous American president. He enjoys a square meal, washed down with generous wine, the gossamer says. No doubt of that, and then there is the further consideration that after he has dined and drunk heartily there is a woman about the white house having the right to rail at him about how horribly his breath smells. "We might as well be the president of a big county like this, and a widower!"

Marquette's dog population has been perceptibly curtailed since the snow. Still, to continue to give place to the baseball time, and the bicycle, the boys have had no use for the poor brutes, and cold pizza has slaughtered dozens of them to an untold degree. "Tis a dog-gone shame, and the boys who have thus basely repaid the services of the animals raised and reared around their homes, will never grow up to be presidents. Ingrates never become successful politicians, Cinders has observed.

In a civil action that came before a country justice the defendant called for a jury, carrying favor or witness. After the witnesses had told their conflicting stories and the counsel had been heard the justice, entering into a long and tedious hour or so elapsed, when word was sent in that they had agreed. They were brought into court, where the justice was in waiting to receive the verdict and interrogated them in the usual form. "Gentlemen of the jury, have you found a verdict?" "Inquired the magistrate solemnly. "We have answered the verdict. "What is your verdict?" "Guilty, your honor!" "Guilty? What do you mean? This is a civil action, and the trial shows that the defendant must find a judgment for the plaintiff in dollars and cents, or that he had no cause of action—there is no criminality in the case. In the meaning of the word, an will have to retire again, gentlemen, and bring in a proper verdict." The jury ones more sought retirement. Fifteen minutes later they came back with the verdict "no cause of action," when the justice discharged the intelligent "good men and true" in disgust. The plaintiff will appeal the case when he gets through swearing about it.

'Twas a Fisher street boy, and he had been fishing all afternoon without getting a bite. A more dejected looking youth than he appeared, as he trudged along Front street on his way home, carrying a empty bucket on his arm and with his fish pole swung over his right shoulder. Cinders never gazed upon, as he walked along, carrying a empty bucket on his arm and with his fish pole swung over his right shoulder, and at each turn a portion of the line, to which a big hook was attached, became unwieldy, and he dropped it to the ground. Just as he had descended to within fifteen inches of the pavement, a large, hairy dog rushed across the street to intercept him. The boy, who had the hook caught in his left ear as the puddle vanished around the corner with a frightened shriek, "Go on!" "I've got one!" exclaimed the boy, when the jerk on his line woke him from a reverie into which he had fallen while thinking of his bad luck during the afternoon. He brought the dog to hand-some. Then there was some beautiful play. The dog would lie on his back and paw at his ear, then jump in the air at his invisible tormenter and run around in a circle, howling with anguish, while the boy held having to walk the intervening miles strike yelling for help at the top of his voice. It was an animated tableau while it lasted, and a crowd gathered in a twinkling. Presently the dog, who was held by a man in the crowd who removed the hook from his ear, when the frantic canine started off on a run, while the stinging sensation of his contact with his skin line, secured his hook, and resumed his disconsolate tramp towards home.

Cinders retired to rest in a Byronic fit of mind last night, and towards the morning hour he "dreamed a dream that was not all a dream." Such a thrilling, visionary experience has never met his eye. Disturb his peaceful rest. It seemed to him that, by one of those unaccountable mischances which befell him, he had never again disturbed his peaceful rest. He found himself destitute of money, friends or a railroad pass in a strange city, distant enough from home to make the prospect of having to walk the intervening miles strike terror to his soul. At last a thought struck him below the belt. Ah, yes, just so—he would get through it through in some way. At the depot where conductors come not to demand fare, or heartless brakemen to give the bounce if the passenger fails to produce it. As if it were his, he bought a freight train rolled up to the depot where Cinders was ruminating on his harassing situation, and—angels and ministers of grace be thanked!—there was a box car, back near the rear, with a hole punched in the side through which a man could easily enter. A glance within showed that it was empty. Was ever anything more fortunate? Cinders prepared to embrace the opportunity, even as the married man does the hired girl when he finds her alone in the kitchen and knows his wife is upstairs. Watching his time, he alighted just into the car when no one was looking, and squeezed himself into the darkest corner. Soon the train began to move, and was annihilating space, at the rate of ten miles an hour, in the direction of his home, when a swaying motion was perceptible; the car lurched heavily to one side; then settled down slowly, softly—oh, so soft—into a ditch filled with water, which stood in through the cracks and crevices until it reached his back, as he lay on the side of the toppled car. "Now he feels it—the stinging sensation of his contact with his skin shoots through his frame, he tries to shriek for help, and—is awake! For a moment the vivid, realistic character of the dream held, his faculties in thrall, and he doubted if 'twere really a vision. The rumble of a midnight ore train departing in the distance assisted no prolong

the illusion, but at last he shook it off by a vigorous effort, and turned over in bed to resume his interrupted slumbers, saying to himself, "Thank heaven, it was all a dream!" when the pungent exhalation was drawn in a muffled exclamation that sounded like a smothered oath, as he turned out of bed and grumblingly stumbled for a match to light the lamp. A moment later the wail of two year-old boy rose on the midnight air from the apartment, and then all was still. Cinders shivered and shuddered at the thought of the performance, merely remarking in conclusion that it wasn't all a dream.

WHERE WE STAND.—At a session of the county board held late last fall a resolution was adopted directing the county clerk to have his annual report published in the MINING JOURNAL, and the Negaunee Herald. This resolution the clerk has seen fit to ignore, for reasons which—as they must have seemed good and sufficient to that official—this paper has not seen fit to call into question. Not so with the Herald. In its issue of the 11th, that sheet sent forth a lugubrious trail over the action of the clerk in declining to give the publication of his report, in accordance with the instruction of the county board. Assuming that we were equally disappointed with the Negaunee paper, the Ishpeming publication of Saturday last printed a lengthy article on the text suggested by the plaint of its Negaunee contemporary, in which it read a lecture to the clerk of the county board, and the MINING JOURNAL on the subject of their relations to the county, and the true way of making the most of the patronage controlled by the county board and officials. Now, the MINING JOURNAL has not deemed the course taken by the clerk of sufficient consequence to call for discussion in these columns; nor do all for the afflicted which they do in answer to the strictures of the Ishpeming sheet. The animus of the latter's article on the subject is dictated by a petty spite characteristic of a certain class of public printers, whose publishers believe the true mission of a newspaper to be "milking" the public in the various ways known to and practiced by the profession, and who have accustomed themselves to a diet of "public pap." But a brief statement of the position held by the MINING JOURNAL may not amiss in this connection—it may, perhaps, open the eyes of the other papers of the county to a sense of the dignity of journalism when legitimately conducted, which, if acted upon, will in time greatly improve their tone, while possibly, extending their influence.

Be it known, then, that the MINING JOURNAL is neither a pap-sucking nor pap-seeking "organ." It maintains itself on a legitimate business, honorably and legitimately acquired. Its publishers are not supplicants for the patronage controlled by the county board, or county officials, because they believe the favors of persons holding official station to be the most unwholesome food a newspaper can subsist upon. Official patronage that comes to us without seeking we are grateful for, as we are for business sent to this office by all classes of business men, but we are not in the least desirous of being obliged to obtain a chance to nibble with the public crib. Not any. The MINING JOURNAL draws its support from quite another source, and that support is steady in flow and generous in volume that it can afford to let the other papers of the county wrangle over such "fat takes" as the disposal of the county's affairs, and the county board of supervisors. As to the county board, the MINING JOURNAL is not disposed to be so cruel as to urge upon it the policy of having its proceedings given the publicity they would obtain through being reported in full in our columns under a regular contract looking to that result. A body of men whose management of county affairs has resulted in a falter of \$18,000 to take place under their eyes, without suspecting that there was anything amiss until the depleted state of the county treasury suggested the wisdom of having an accounting with the delinquent treasurer, should not be expected to let the people know they are running (and ruining) the county affairs, and the county board to the tax-payers at least a small sum it would cost to post the people as to their methods of transacting public business. With such a damning exhibit of extravagance at the bug-hole it would be atrociously unkind to deny them the poor privilege of helping themselves somewhat with the masses by a regular and official publication, to which they can "point with pride" when seeking a re-election!

The MINING JOURNAL has procured at its own expense and published as news a verbatim report of the county board proceedings regularly until within a few months past. Lately the demand on our space has been such that instead of a long and detailed report we have a summary of the board proceedings, compiled by a reporter of this paper, and printed without expectation of reward, save in the way that proper enterprise in a newspaper is sure to bring its return—in popular appreciation and support, and the ample patronage naturally following in their wake. The Ishpeming sheet closes its article with the announcement, "we are going to get right into the middle of this county business and get even, you bet!" It is welcome to "get there" if it can. The MINING JOURNAL relegates to that paper and its Negaunee rival the quarrel over the county patronage, with all that the same embraces of "fat takes" and "padding" for the benefit of the present county administration. If county officials choose to avail themselves of our superior facilities they will be accorded fair treatment, precisely as are our other patrons, but the MINING JOURNAL isn't going to worry itself much over the disposition they make of their work. It certainly must protest against this thing of keeping them eternally in hot water over the "padding" of a few hundred dollars' worth of printing and advertising patronage.

FAIRLY STATED.—"This is no town for a workman to live in," the writer overheard a laboring man remark to a companion the other day. "I can't rent a house big enough to accommodate my family without paying more than half I can earn for it. Then living comes high here, besides; and between high rent for a house and high prices for everything he needs, a man who earns his living by labor has no

show. I'm going to pull out of the place as soon as I can get away." And the conversation ran on in the same strain for half an hour, when we had heard enough of it, and left. Now, the workman whose words we have given told the exact truth. Marquette is not a place where the workman has a chance, albeit the prices paid for labor here are high. We need not restate the reasons in support of this assertion—they are set forth amply enough in the language of the laborer, who had felt the iron in his soul, and but uttered the sentiment of his class. High rents, high prices for everything, and the excessive cost of living caused by these are keeping hundreds of laboring people from coming to Marquette, and will soon begin driving persons of the same class away, unless a change for the better takes place. Without pleasant houses and good living at moderate cost for laboring men, manufacturers can not come in, and unless these are established here Marquette cannot have a stable population and enduring prosperity. Think of these things, business men and property owners of the city. Do not let a selfish greed for inordinate present gain induce you to lay the knife to your own future welfare. Adopt a broad and liberal policy now that will attract laboring men and manufacturing enterprises here, and you will reap a golden reward hereafter, while the city will flourish and prosper with you in the meantime.

A SWINDLER EXPOSED.—Drs. Frothingham and Kingsley, of the Grand English, Medical and Surgical Institute, 65 Monroe street, are in the city, and domiciled at the Summit house, where persons desiring treatment will find them until the 26th, when they will leave here to fill other appointments. The institute with which these eminent physicians are connected is so well known that its name is a guarantee of their ability to do all for the afflicted which they advertise to do in the circular distributed by their agent in this place prior to their coming, and in their announcement, printed elsewhere in to-day's MINING JOURNAL. So well-known is it, in fact, that characterless pretenders do not infrequently use its name to deceive the public, by falsely representing themselves as its faculty. One of these latter was here last week with an accomplice, the two doing business under the name of "Drs. Kierstead and Wesley," and impudently issuing a facsimile of the circular owned and copyrighted by the institute to endorse their fraudulent pretensions! Kierstead is a fellow who was employed by Drs. Frothingham and Kingsley to do certain work in the laboratory of their institute until some two months ago, when he decamped, taking with him all the cash he could lay hands on, and a copy of the circular with which he is now introducing himself to the public. His late employers are very anxious to bring him to justice for his dishonest and base employment, and he is making of their circular, and also desiring those whom the scamp has imposed upon here to call upon them at the Summit house, where they will obtain safe advice and skillful treatment from the genuine representatives of an institute that values its good name more highly than money, and on the things that are done by Kierstead will find satisfactory. The fellow got out of their way with great celerity when the advent of their agent gave him notice of their coming.

A SAD EVENT.—Seldom has the MINING JOURNAL been called upon to announce a death that created such widespread sorrow as that of Mrs. Pickands, wife of our townsman, Col. James Pickands, which occurred at the family residence, in this city, on Monday last. The deceased lady was the idol of a happy home, beloved by a large number of friends, whose she had bound to her by ties of strong affection through the winning sweetness of a refined nature, and the center of a social circle that is robbed of much of its brightness by her loss. Her death resulted from cerebral spinal meningitis. The whole family were with her in the last moments of her life, and the grief of her gentle, kindly spirit had passed away. Her funeral took place on Wednesday, and was conducted according to the beautiful ceremonial of the Episcopal church, of which society she was an earnest member in life. Mrs. Pickands was a cultured, charitable Christian lady, a devoted wife and a tender mother. In their great sorrow the members of the bereaved family have the sincerest sympathy of our people, of all creeds and classes, for all had in her a friend in their hour of distress or need. The large concourse that followed her remains to the grave spoke strongly of the esteem in which she was held, and the day of her interment was, indeed, one of mourning in the city, several of the business places being closed in respect to her memory. A true woman has gone from among us—may heaven grant her rest, and send balm for their deep sorrow to the stricken husband and grieving children whom she has left behind.

SINCE the whistle on Hager & Johnson's planing mill was tied up by an ordinance, the boys in the factory have been bothered with surplus steam that they didn't know what to do with. The whistle served as an escape until the common council, chiefly to please the MINING JOURNAL, issued an injunction against its further use. This naturally begot a coolness between the planing mill boys and the MINING JOURNAL force, which might have culminated in a general engagement some "off" day, but that a compromise has been effected which averts the danger. Feeling that this paper was responsible for having their whistle choked off by the city parents, our business manager last week proposed to the proprietors of the planing mill to relieve them of the superfluous steam thus left on their hands, besides paying them for the privilege of using it to run the engine that keeps the machinery in the MINING JOURNAL office in motion. The offer was accepted, and the connections made on Monday, since which date our presses have been turned by rented steam, our own boiler being held in reserve, to serve in case of accident to

our new steam supply. The arrangement works to a charm, as the planing mill boiler generates more steam than can be used in that establishment, and the surplus suffices to run our engine at its full speed. So the whistle is at last solved to everybody's satisfaction, and the war cloud which lately hung low in this neighborhood has melted into thin air.

MODEST BUT MERITORIOUS.—On Monday Beckett's circus will visit Marquette, and the MINING JOURNAL desires to say a good word for this show, which, though not as cumbersome in size and pretentious in character as some of the unwieldy "aggregations" of weather beaten canvas, old wagons, knock-knee tumblers and spavined horses now on the road, is really an excellent circus. The performance embraces all the really pleasing features of the larger shows, without the tiresome "stuffing" by which they are padded out to bring them somewhere in the neighborhood of the expectations raised by the extravagant promises on their bills. It does not pretend to be the "largest show on earth," but it claims to be one of the best, in the meritorious character of its ring performance. Its performers are all artists in their various specialties, and there are over 100 of them—a number ample for all the business that can be crowded into one ring in the time a circus performance usually lasts. The show is a good one, the MINING JOURNAL confidently assures its readers, and those who gather under its canvas will get their money's worth of fun, several times over.

THE MINING JOURNAL has such a host of readers that some of them will be sure to find the following circular, issued from the general land office, department of the interior, Washington, and addressed "to receivers of public moneys," of interest, hence we give it place.

GENTLEMEN:—Having come into possession of information that large numbers of fraudulent certificates of deposit, purporting to be of various U. S. depositories, for moneys alleged to have been deposited to cover the surveys, as provided for by sections 2401, 2402, and 2403, as amended by the act of March 3, 1879, and the act of March 3, 1880, of the United States, have been issued and put upon the market, rendering it possible for innocent parties to be defrauded in their purchase, you will be advised of the existence of these fraudulent certificates, and request that all holders of certificates of deposit send them to this office for the purpose of examination and verification; said certificates to be returned to you with the certificate of this office as to their genuineness attached. You are directed to post a copy of this circular in your office, and to take such other steps as you may deem necessary to disseminate the information without incurring the expense of publication in newspapers.

N. C. McCRAWLAND, Commissioner.

It is amusing to watch the boys fishing for herring in the bay these pleasant mornings. The fish come in by thousands and millions in shoals, and the docks are lined at such times with dozens of urchins, of high and low degree, all eagerly intent on jerking the fishy visitors out of their native element. The manner of catching them is decidedly novel. A long pole with a cluster of hooks attached to ten or fifteen feet of stout line is used. The hooks are cast far out in the water, no bait being used, and then rapidly drawn through it in a side-long direction. Ordinarily the hooks bring up one or more of the shifty fellows, sometimes each hook in the cluster having its wriggling captive, so thick are they in the water when a shoal is passing. It is royal sport for the boys, and not at all unremunerative, as a morning's catch often brings enough to keep the lucky fisher in peanuts for a week. These fish are about six inches long, and the finest of eating.

AN ACCIDENT to the press on which the MINING JOURNAL is printed, while the edition was being worked off last Saturday morning, delayed the paper for some of our subscribers—chiefly at the home office—and postmaster Billings and his force of clerks had their time pretty fully occupied early in the day explaining to disappointed callers why the paper wasn't waiting for them as usual in their boxes. Later the tide set toward this office, and the misery of making endless explanations was added to that unloaded upon the force by the untimely mishap. With the aid of half a dozen machinists from the Iron Bay foundry, the machine was got in condition by night-fall to work off the balance of the edition that night. It was an annoyance to us, and to those of our patrons who failed to get their papers on time in consequence, but it demonstrated forcibly that the MINING JOURNAL is looked for and read in this community.

A SUGGESTION.—The city owns some horse flesh that is eating the fodder of idleness, fires being of such rare occurrence that the city cannot get exercise enough in racing to them to keep their systems in the healthy state. The city also owns numerous streets that would be much the better for an occasional sprinkling. Now, why wouldn't it be a good idea to have these horses hitched to a sprinkler once or twice a day during dry weather, and utilized to put down the dust, since they are so seldom needed to assist in putting out fires? We offer this suggestion to proper officials, as not unworthy their consideration, being strongly inclined to the belief that they would have acted on the idea before if it had occurred to him. The tax-payers like to see both men and horses in the city's employ "earn their oats."

DEATH OF A PIONEER.—A pioneer citizen of Marquette passed to final rest Thursday afternoon at 2 o'clock, when major John Beeden closed his eyes on scenes with which he had grown familiar a third of a century ago. He has been a resident of the upper peninsula for nearly, if not quite, forty years—indeed our reporter has failed to find anyone whose residence here extended so far back that he could tell when the deceased first settled in this region. At one time major Beeden held a government position, in connection with the Indian reservation at L'Anse, where he settled in 1846 remaining there in discharge of his duties as Indian farmer for eight years. Of late years his health was extremely frail,

and his decease was not as much a surprise as it was a shock to his many friends. He was nearly eighty years of age, having been born in July, 1802, in the town of Man, where he emigrated to this country when 12 years old. He was a mason in good standing, and his funeral, which occurred from the residence of his son, with whom he resided latterly, was with the honors of the order, the remains being laid to rest in the beautiful cemetery adjoining the city. Three children—two sons and a daughter—survive him, one of the former being a resident of our city, the other being located at Grand Marais. This daughter is the wife of Mr. B. R. Livermore, of Houghton, where she lives with her husband, a gentleman well-known to our people, and generally throughout this part of Michigan.

CATHEDRAL FAIR.—On Monday evening a fair for the benefit of the cathedral fund will open in Cole's hall, to continue during the week. The doors will be thrown open at 7 o'clock each evening, and supper will be served in the hall, the price of the latter being placed at 50 cents, and of admission to the hall at 15 cents, children 10 cents. The public generally is invited to attend, and we hope to see the fair generously patronized by our people of all denominations, as the proceeds will go towards building the new cathedral here, a church edifice that will be a credit to the city when completed. The programme for the fair gives assurance that those who attend will get their money's worth in pleasure, besides the consciousness of having contributed something to a good cause.

AT a meeting of Division No. 3, A. O. H., held to take appropriate action on the death of the deceased member, John Connors, the following preamble and resolutions were adopted: WHEREAS, It has pleased Almighty God to remove from our midst our worthy brother member, John Connors, be it, therefore, Resolved, That Division No. 3 of the A. O. H. of Marquette county, Michigan, publicly expresses its deep regret at the death of our brother member, and be it further Resolved, That we cause a copy of these resolutions to be published in the MINING JOURNAL, and also a copy to be given to the widow of the deceased, as expressive of the feelings of this society.

SALOON STATISTICS.—From county treasurer Wright we get the following figures, showing the number of liquor dealers in the county who have filed satisfactory bonds and paid their tax for the current year, under the law regulating their business: The total number is 108, of which Marquette furnishes 28, Negaunee 29, Ishpeming 26, Ely 5, Republic 11, Champion 2 and Michigamme 7. It will be seen that Negaunee leads the van in the number of its drinking places—a fact which will hardly amaze those who have kept track of the number of rows reported from that lively burg during the twelve months past.

MORE in sorrow than in anger does the MINING JOURNAL record the fact that the roads radiating from the city are in a bad state. Our country cousins must "mend their ways," or the visits they will receive from their city relations won't go far towards relieving the monotony of rural life this summer. Good roads are said to be a sign of civilization. If so, those who have to use the roads hereabout will bear us witness that civilization in this section doesn't hang out much of a sign.

It has been a quiet week in police circles. The city's nocturnal guardians went on duty Monday night, and have managed to preserve excellent order thus far without being compelled to use their clubs. Not a single case has come before his honor, of the recorder's court, for adjudication—an indication that the city is unusually orderly for this season of the year. With an ample police force, and incorruptible justices to administer the law, this is not altogether a matter for surprise. Marquette is no longer a healthy town for bummers.

FILED about the mill pond and in the adjacent yard at Edward Fraser's saw-mill on Cherry creek is a fine stock of logs, the fruit of last winter's work in the woods, and enough to keep his mill running steadily during the season. Gazing upon the charred and stumpy surrounding country, one can't but wonder, while noticing the collection of logs, where in the dense Fraser gathered them; but that is, we suppose, one of the tricks of his trade—just as filling this page with readable items even on a dull week is a trick of ours.

OUR Presbyterian friends (and the MINING JOURNAL has a whole congregation of them) are hereby enjoined to do something for that disabled stove pipe on the south side of the roof of their house of worship. In its present paralyzed state it is neither a thing of beauty nor of use, while it is liable to be brought down on the head of some passing sinner by a sudden gust of wind, with results that we shudder to contemplate. Brace it up, brethren, and the city will rise up and call ye blessed.

As may be seen from the notice published elsewhere, the city assessor has completed his work, and those interested who desire to inspect the assessment roll will find it open for examination on Monday and Tuesday next, from 9 A. M. to 6 P. M., at the city hall, on Spring street. If tax-payers have any fault to find with their assessment, let them make their voices heard on those dates, or forever after hold their peace.

SEVERAL new houses loom up in different parts of the town, but ten are needed where one is in process of construction. Those going up are all being built by persons intending to occupy them, so no particular relief to the pressing demand for dwellings need be apprehended from this source.

RHODES & BRADLEY, dealers in pig iron, rails and iron ore, 57 Dearborn street, Chicago, have dissolved partnership. Mr. Bradley retiring from the business, which will hereafter be conducted by Mr. Chas. D. Rhodes, of the late firm, at the old stand.

MICHIGAMME.—Lake Michigan is clear of ice and navigation thereon open.

The schools are closed for the term, on account of the prevalence of small pox in the village. The principal, H. M. Pelham, took his departure for the "range" Monday morning.

What barely missed being a fire occurred on Sunday at the house occupied by Mr. John Longershausen, owned by George Bloch. The fire caught in the storm shed at the back of the house, from what cause is not known, and came very near getting a good start before it was discovered. The bell was rung and the engine got out, but a few buckets of water had the fire extinguished ere the engine was ready to throw a stream. The damage to the building was slight, and no damage to furniture. No insurance. This is the third alarm of fire within a few weeks. People cannot be too careful in the care of ashes, stovepipes and other things about their premises from which a fire may start at an unguarded moment and, in this dry weather, be the cause of a serious conflagration. Don't throw a burning brand out of the stove into the yard, because it is too long. Keep your ashes in barrels near your house or barn—keep your stove-pipe in good order, your house and furniture insured in a reliable company, and last—but not least—keep your temper at a fire.

The diamond drill at the Orleans was disabled last week by the breaking of a cylinder head. The damage will be soon repaired and the drill again at work.

Mrs. John O'Brien and her daughter Annie returned from Milwaukee on Monday, whither they had gone to have an operation performed on Miss Annie's eye. The operation was successful.

Charles W. Sunstrom had his little finger so badly broken by a blow from a drill hammer in the hands of his partner that amputation was necessary. Charlie was holding the drill and his partner striking. The blow was accidental, though its results to Charlie somewhat serious.

Miss Loomis, the teacher in the intermediate department, left for her home in Wisconsin on Tuesday. Miss L. leaves hosts of warm friends in Michigan, who unite with this correspondent in wishing her well wherever she may, in future, be located.

The Ida exploring association has secured an option in lot 1, section 20, town 48-30, and will explore it thoroughly. This looks like business, and we hope the association may develop a good paying mine. This property is located about a mile east of town, near the slaughter house.

A few nice trout have been caught in Michigan river within a few days past, but trout don't bite very readily until that little case, called the mosquito for short, gets ready for active service.

A. E. Erickson has leased the building owned by Messrs. Nast & Kasper, of Milwaukee, and now occupied by E. Stenrud, and will move his stock of furniture into it about the 10th of July.

Considerable building is going on in town. John Hickey is building a barn in the rear of his store. E. Stenrud is building a store on his lot on the corner of First and Brooks streets. The store will be 24x60, and two stories high.

A. L. Johnson and George Black have purchased a few hand force pumps, just the things to wash windows or put out a small fire, and they will furnish those who may want such an article at cost price. Mr. Johnson did good service with one at the fire on Sunday.

There is a man in Michigan who, if his past is indicative of his future, will yet do his country or the state some service. His great knowledge of the law, his broad and comprehensive views on all matters of business, eminently fit him for a seat on the bench. We suspect he is studying up those old judgments and decisions, that he may be in readiness at his country's call to enter upon a career for which his talents have so thoroughly qualified him.

ITEMS OF INTEREST.

It was Longfellow who shyly described the lady as wearing flowers "on the congregation side of her bonnet."

UNRIVALED.—As being a certain cure for the worst forms of dyspepsia, indigestion, constipation, impurity of blood, torpid liver, disordered kidneys, etc., and as a medicine for eradicating every species of skin disease, from an ordinary pimple to the worst ulcer, Burdock Blood Bitters stand unrivaled. Price, \$1.00.

"WHAT part," asked a Sunday-school teacher, "of the burial of Sir John Moore do you like the best?" The boy was thoughtful for a moment and then replied, "few and short were the prayers we said."

A HEAVY SWELL.—Jacob H. Bloomer, of Virginia, N. Y., writes: "Thomas' Electric Oil cured a badly swollen neck and sore throat in forty-eight hours. My wife was also cured of a lame foot in twenty-four hours."

A SMART chap on the street corner called out to a lored man who was trundling a wheelbarrow, "hello, Sambo! What makes your nose so flat?" "Sambo," "Don't know, massa; 'specs 'it's to keep it out of other folks' business."

INCREDIBLE.—F. A. Scratch, druggist, Ruthven, Ont., writes: "I have the greatest confidence in your Burdock Blood Bitters. In one case with which I am personally acquainted their success was almost incredible. One lady told me that half a bottle did her more good than hundreds of dollars' worth of medicine she had previously taken." Price, \$1.00.

PATRICK (dressing for a party)—"Bedad now, and I sha'n't be able to git on those boots till I've worn them a time or two."

MAKING A RAISE.—John Hays, Credit P. O., says that for nine months he could not raise his hand to his head through lameness in the shoulder, but by the use of Thomas' Electric Oil he was entirely cured.

A NEW YORK engraver recently made this mistake: "Mr. and Mrs. — respectfully request your presents at the marriage of their daughter."

THE ELIXIR OF LIFE.—That purely vegetable compound, Burdock Blood Bitters, may be justly termed the elixir of life. A pleasant and effective medicine; it imparts strength and vitality to the entire system.

We are told that "at Pompeii combs have been found exactly like the modern finest kind." This would indicate—well, you catch the idea!

HOPE on, hope ever, no matter what the ailment may be, rheumatism, neuralgia, lameness, asthma, bronchitis—if other treatment has failed—hope on! go at once for Thomas' Electric Oil. It will secure you immediate relief.

A CLEGGYMAN was traveling through the Humboldt mountains with an old miner. Said the miner: "Do you really believe that God made the world in six days?" "Of course I do." "Well, don't you think," returned the miner, "that he might have put in one more day to advantage right around here?"

SEEDS!

FOR THE VEGETABLE GARDEN FROM

D. Landreth & Sons,

Who owns farms in Pennsylvania, Virginia, New Jersey and at Manitowoc, Wis., 1,574 acres in all, devoted exclusively to growing seeds adapted to the various climates of the country. We purchase these seeds direct from the Messrs. Landreth, and they should not be classed with the seeds left on commission throughout the country. Use Landreth's seeds, and a good vegetable garden is assured. Also for sale, PETER HENDERSON & Co.'s

H. R. HADRICK, AGENT, MARQUETTE, MICH. 7057

MORTGAGE SALE.—Default having been made in the conditions of a certain mortgage dated October 12, 1874, made by Deitrich Weiman and wife, of Marquette, Michigan, to John Schwartz, of the same place, and recorded in the office of the register of deeds of said county, in Liber "3" of mortgages, on page 13, which mortgage was by the said John Schwartz assigned to Sarah K. Spear, by an instrument of assignment dated December 12, 1881, which assignment is recorded in the same register of deeds' office, in Liber 10 of mortgages, on page 76, on which said mortgage there is claimed to be due at the date of this notice the sum of five hundred and sixty dollars, and no proceedings either at law or in equity having been taken to foreclose or to recover the money secured by said mortgage, and the power of sale therein contained having become operative by reason of such default, therefore, by virtue of said power of sale, and the statute in such case made and provided, I will sell by public vendue to the highest bidder, at the front door of the court house in said city of Marquette, (being the place where the circuit court for said county is held), on Monday, the seventeenth day of July, A. D. 1882, at ten o'clock in the forenoon, the premises described in said mortgage, or so much thereof as may be necessary to pay the amount due on said mortgage, with interest and expenses of sale, which said premises are described as follows, to-wit: "All of the lot No. nine "2" of block No. nine "4" of the Cleveland Iron Mining company's subdivision of the city of Marquette according to the recorded map of said subdivision to be found in the registry of deeds of said county. Dated Marquette, April 17, 1882. SARA K. SPEAR, Assignee of said Mortgage. M. H. MAYNARD, Att'y for Assignee. 718w13

R. ROHL, Manager.

BUY THE BEST! BULLOCK'S LATEST IMPROVED DIAMOND POINTED ROCK DRILLS.

Prospecting, mining, shafting, tunneling, draining, quarrying and sub-marine blasting. The accompanying cut represents my new drill, "The Little Champion," for shafting or underground prospecting. This machine has ALL OF MY LATEST IMPROVEMENTS.

Including Trunk Engines, with balanced slide valves to use either steam or compressed air economically. It has also my "Pat. Hinged Swivel Head," "Pat. Thrust Register," (for indicating the thickness of each strata), "Pat. Roller Thrust Bearing," and "Pat. method of changing the feed while the drill is running." The drill rods are all fitted with "Pat. Bayonet clutch couplings," which uncouple by giving the rods one-fourth of a turn. THE HIGHEST TESTIMONY AWARDED THEM FOR RAPIDITY OF EXECUTION AND ECONOMY OVER ANY OTHERS IN USE.

For prospecting, these drills accomplish the most IMPORTANT RESULTS otherwise wholly unattainable. By their use only can mines be penetrated to a depth of from one to TWO THOUSAND FEET through the HARDEST ROCK, at any angle, taking out a core the entire depth, fully developing the strata passed through.

Tunnels driven and Shafts sunk in from one half to one sixth of the usual time, by using these machines in connection with our Pat. Long Hole Process.

LITTLE CHAMPION. AGENT FOR Worthington's Duplex Pressure Pumps.

THE BRUSH ELECTRIC LIGHT APPARATUS. "LIGHT FOR THE WORLD."

The Mining Journal.

ISHPEMING, MAY 20, 1882.

THE woods and swamps throughout the county are all ablaze. This dryness must give place to dampness, or helenblazes will be to pay hereabouts.

JOHN TRUAN, a resident of Negaunee, but the owner of considerable real estate here, was brought before justice Young on Friday and fined \$10. The law is no respecter of persons.

JOSEPH LE SAGE, for a year or more past the popular bar tender at Mose Toutloff's, leaves to-day for St. Paul, Minn., where he will make his home, engaging in a different business.

THE resignation of Mr. F. P. Mills, as alderman from the first ward, was accepted by the council on Wednesday evening, and a special election to fill the vacancy ordered for the first Saturday in June. Who'll be the man?

MAYOR OUTHWAITE has been absent from the city during the week, having been called to Marquette by the death, and to attend the funeral of his sister, Mrs. Col. James Pickands, of that place. In his bereavement he has the genuine sympathy of all.

No matter on what street you may wish to perambulate, you are everywhere met by rotten and tetering sidewalks. On some of the walks in the business portion of the city, two-thirds of the planks are broken, and the other third have been ripped up and ditched. The sidewalks of this city would do credit to an university town. There is a whole summer's work for the street commissioner in the one task of repairing sidewalks. But will he do the work?

KILLED.—A young man by the name of G. A. Peterson, employed at the National mine, received injuries by a fall of rock last Friday, which resulted in his death the following Sunday. Peterson was a young man, about 18 years of age, and had only been in this country a short time. His parents, who reside in Sweden, are reported to be possessors of wealth, yet the young man chose to labor in a new country rather than live in luxury in the old. Kind friends cared for him in his last hours, and gave him remains sepulture here.

MAY 17th was the 68th anniversary of the independence of Norway, and former citizens of that independent little country across the sea who now live in Ishpeming observed the day by a display of national colors and bunting. The motto of the Norwegians here is, as that of all other foreign born citizens should be, reverence for the mother country, but loyalty to the land of their adoption, and we don't care how many mother country holidays they have and observe. We honor them for the observance.

At the Wednesday evening meeting of the common council the proposition of Mr. John Jones to keep three horses in the engine house, with men to sleep in the building and attend to the animals, was accepted. The council decided to pay Mr. Jones the sum of fifteen dollars for each and every fire alarm responded to. Mr. Jones bought the remaining horse of the fire department, for which the city gets \$225. This arrangement will be entirely satisfactory to the tax-payers, as it insures them protection, and at less rates (according to the past history of fires) than if the city kept horses of its own in elegant leisure.

HOUGHTON'S HORROR.—A double tragedy occurred at Houghton Tuesday morning. A man by the name of Swamper, jealous of the conduct of his wife, shot her while she was sleeping in a bed with her mother. He then went into an adjoining room, and blew a hole into the place where his brains ought to have been. Both died instantly. Swamper got his wife out of a "soiled dove cote," and as she did not mend her ways and live faithfully with him, he took this method of bringing her to time. As the woman was asleep, it is probable that she never knew what struck her. She had been out the night before, having some fun with the boys.

THE mouthy agent of Macready's theatrical company—now showing in the county—didn't make much by shooting off his bazoo at the local authorities. He complained of the high (?) license, which is five dollars per night, and when he began to give the mayor "chin" music, and call the city dads harsh names, his honor sat down on him and his show by refusing to give him a license at any price. The theatrical company that can't afford five dollars per night for license must be altogether too rich in talent for our blood, and the MINING JOURNAL is glad they will not be allowed to afflict us.

MR. INGGER J. MELHOUSE and wife returned from Norway on Tuesday, whither they went last January on a visit to parents and friends. During his absence Mr. Melhouse was not idle, as will be seen from the fact that he brought with him on his return trip some 250 immigrants from his native land and Sweden. About one-third of the immigrants left the party at other places, but the remainder reached this city with Mr. Melhouse on Tuesday, where they will make their home. Many of the strangers were women and

children—the mothers, wives and children of men who had come here before, and who now have homes for the reception of their families. There were many family reunions in Ishpeming on Tuesday—and all none the less joyous events on account of the foreign complexion of the arrivals. The MINING JOURNAL offers its welcome to the strangers, and trusts that their homes in this strange land will yet become as dear to them as the ones they left across the sea. Be kind to the strangers, and show them by your every action that this is a free country, that will protect them and at the same time give them a chance to prosper.

THE common council, as a board of review, inspected the assessor's books on Monday and Tuesday. The board tampered but little with them, considering the work done by the assessor as about as nearly correct as it could be made. The following is the assessed valuation of the mines in and about Ishpeming: Lake Superior, \$3,000,000; Cleveland, \$2,500,000; New York, \$600,000; old Barnum, \$300,000; new Barnum, \$500,000; Salisbury, \$200,000; Lake Angeline, \$150,000; Norwich, \$50,000; Lowthian, \$100,000; Winthrop, \$100,000; Nelson, \$100,000. The great Republic mine has been assessed at \$2,800,000, and the Jackson at \$800,000.

MRS. THOMAS KEMP, wife of a miner employed at Saginaw, and who has lived in that suburb, was brought to this city on Wednesday, and from here taken to Marquette, by sheriff Jeffrey. Mrs. Kemp has been adjudged insane by the local physicians, and if their opinion is approved by the county physician, she will be domiciled at Kalamazoo in the future. The woman has had frequent outbreaks of insanity during the past three or four years, but this latter one discounts them all. During the intervals between her crazy flights she was known as a religious and kind-hearted woman, although somewhat of an enthusiast on religion; but when her brain went back on her she was just the opposite, and would swear and tear around at a rate that would put to the blush any circus hanger-on we ever saw. At the time she was brought to this city she was so wild that she had to be tied in the carriage. Her removal from Saginaw is a source of relief to the people of that location, whose terror she was. Yet all sympathize with the unfortunate woman and her afflicted husband. She is of middle-age, and has no children.

SYMPTOMS OF PARALYSIS.—A twitching of the eyes, numbness of the hands and feet, with more or less pain and throbbing at the base of the brain, are some of the premonitory symptoms of this rapidly increasing disease. German Hop Bitters should be taken when you are warned by any of these symptoms.

PLATFORM WAGONS.—Walsath & Tislov are agents for Thompson & Hayward's platform spring wagons and buggies, the best in the market, warranted made of the best material and durable. Samples can be seen at our barn, and you are invited to inspect them. These wagons are sold cheap.

WALSATH & TISLOV, Ishpeming.

THE MINING JOURNAL.

Entered at the Post Office at Marquette, Mich., as second-class matter.

POWELL STACKHOUSE, the representative of the Cambria Iron Company, has been on the Menominee Range the past week, making a thorough inspection of the mines recently purchased by that company. While it is probable that Mr. S. will have the general supervision of these properties, it is understood that no change in the local management will be made until existing contracts are filled, up to which time the Menominee Company will continue to operate the mines. The MINING JOURNAL learns from the very highest sources that the consideration paid by the Cambria company was, or is to be, \$2,500,000 instead of \$1,800,000 as has been announced.

At last the MINING JOURNAL is able to compliment the Ishpeming Imitator on having given its readers a couple of columns of absolutely reliable information in regard to upper peninsula mining properties. True, it was not original with that sheet; neither was it fresh. But trustworthy information, even though stale and at second hand, is better than the sort of stuff with which several self-styled mining papers in this region fill the space which, they allege, is devoted to mining news. How the Imitator happened to print something about mining properties that the public can bank on was in this wise: In announcing the sale by the Menominee Mining company of several of its properties to the Cambria Iron company, the enterprising sheet alluded to an article descriptive of the mines sold, about two columns long, taken from the Milwaukee Republican, which, it observed, would be "of general interest" to readers of the Imitator. So it might—if most of them had not read it one year ago in our annual review of Lake Superior mining properties, which ran through successive numbers of the MINING JOURNAL, and was afterwards printed in book form. Save where the stupidity of the Republican scissort and proof reader, supplemented by similar qualities in the corresponding members of the Imitator's staff, have mutilated the article, it is printed precisely as we published it over one year ago, and as it subsequently appeared in our annual review, as issued in book form from this office. We congratulate Mr. Newett on this additional step taken by him to render his paper a sort of counterfeit MINING JOURNAL, and assure him that the more matter he reprints from our paper—even though a year old—the more nearly will he come to making his publication a channel of trustworthy news about the industries of this section, and that authority on mining matters which he is ambitious of having it regarded.

SHIPMENTS.—The following is a statement of lake shipments of iron ore and pig iron for the season up to and including May 17:

Table with columns: Name of Mine, Gross Tons, Net Tons. Includes entries for Bessemer, Cambria, Cleveland, etc.

Table with columns: Name of Mine, Gross Tons, Net Tons. Includes entries for Chapin, Commonwealth, Curry, etc.

Table with columns: Name of Mine, Gross Tons, Net Tons. Includes entries for Milwaukee, Cleveland, Lake Superior, etc.

Table with columns: Name of Mine, Gross Tons, Net Tons. Includes entries for Taylor, Michigan, Spurr, etc.

Table with columns: Name of Mine, Gross Tons, Net Tons. Includes entries for Lake Superior, Carp River, etc.

The following table exhibits, in gross tons, the total lake shipments of iron ore from upper peninsula ports the present season, up to and including May 17, together with the amount shipped during a corresponding period last year:

Table with columns: Name of Port, 1881, 1882. Shows an increase of 221,822 tons.

ANNUAL REVIEW

IRON MINING AND OTHER INDUSTRIES OF THE UPPER PENINSULA OF MICHIGAN.

THE MENOMINEE RANGE.

VULCAN MINE. At the west Vulcan there are four working shafts in operation—Nos. 1, 2, 3 and 4—in what are now known to be two distinct and separate veins or lenses of ore, lying parallel with and lapping each other. The trend of these lenses, which are about 500 feet distant from each other, is nearly east and west, with southerly dip, the pitch of the south lens being to the west and that of the other to the east.

No. 1 pit is in the south lens, and is 300 feet deep and at least 300 feet long, in a body of ore which varies from 5 to 90 feet in thickness. This pit is being wrought on the modified Nevada plan described in our last annual review. The ore is mined out in chambers 20 feet wide, extending from foot to hanging-wall, leaving alternate bodies of ore 17 feet thick the whole depth of the workings, and unbroken, except where cut by the working drift on the foot-wall side, at the bottom of each succeeding level. It will thus be seen that less than two-thirds of the ore is mined out, the balance being left with the erroneous idea, as the writer believes, that it is necessary to the support of the walls. The plan involves the timbering in of a large amount of valuable ore, which it should be the principal aim and purpose of the management to take out—and Capt. Curnow, at the East Vulcan, is showing how that can be done, with less risk of accident to life or property than is involved in the "modification" of his plan—or rather, we should say, of the Nevada system, which he has been the first to introduce into this region. If the present management of the Vulcan is continued by the new owners, we shall miss our guess if the great bodies of pure ore which have been left as supports at the west Vulcan, do not right speedily find their way to the surface, and the product of the mine thereafter be proportionately increased. There is a large amount of ore at this point, as may be inferred from the fact that the lens has gained at least 50 feet in length and 10 feet in thickness within the past year, the westerly pitch giving an increased length on each succeeding level. They are now opening up the 4th, while there yet remains considerable ground to break above the 3rd level.

Some distance south of No. 1 there is a timber shaft down through the rock to the bottom, which is used exclusively for lowering timber into the mine. This shaft is operated by a drum at the new compressor house, erected since our last annual review, and in which there is a 20x24 Norwalk compressor, and the pumping engine for No. 2 shaft. This building is of stone and located near No. 2 shaft, which is about 200 feet west and north of No. 1, and located some 50 feet back in the foot-wall of the south deposit. This shaft has two compartments, one for hoisting and one for pumping, is supplied with a 12-inch Cornish plunger, and is down 200 feet, with cross-cut to the south deposit, and sinking another lift of 70 feet. On the next lower level a cross-cut will be made to the north deposit, the dip of which will at that depth bring it within 170 feet of the shaft—the intention being to raise a large part of the ore mined in the north deposit through this shaft. The dip of the north deposit is much flatter than that of the south lens, which fact encourages the belief that they will finally come together at some point below the bottom of the present workings.

No. 3, 500 feet west and north of No. 1, is down 300 feet, and connected at the bottom with No. 4, some 300 or 400 feet to the eastward. At the time of our last annual review No. 3 was referred to as a pit in which there were three skip-roads reaching to a depth of 200 feet, in as many shafts which were connected at the bottom. These skip-roads have all been abandoned, the product of the north deposit now being all raised through shafts 3 and 4. In No. 3 there is at least four months' work remaining on the 3rd level, while the shaft and winzes are down, or going down, to the 4th. No. 4 is down 275 feet in workings which show, on that level, from 5 to 25 feet of ore extending over a length of 500 feet. Here the ore is all being mined out, if we except the pillars left to protect the shaft, at an occasional block where the ground is unusually weak, stulls being put in to support the walls. A small pump-house with engine, near the shaft, operates a 10-inch plunger pump, which is so arranged with a globe-valve that in case of accident a steam-pump can be attached and made to do the work through the same column.

From No. 4, on the second level, an exploration drift is being driven north to the limestone, in the hope of finding another lens which is believed to lie in that direction. At the time of the writer's visit this drift was in 310 feet, in heavy soapstone, having passed through 10 feet of banded ore. It will probably strike the limestone in 100 feet more, and the superintendent feels confident that it will before then develop something of value.

The annual output of the Vulcan, since the beginning has been as follows:

Table with columns: Year, Gross Tons, Net Tons. Shows an increase of 221,822 tons.

ment to resume work at the old opening in section 10, where there was originally a good show of ore, but which were abandoned "because the bottom looked poor." These deposits have never been properly worked, and there is every reason to believe that at this point the history of old No. 1, which at one time showed equally as poor in the bottom, will repeat itself in the development of a regular and well-defined lens. In fact, the management evinces a determination to institute a series of thorough and well directed explorations all along the line between the east and west groups hereinbefore described, and it is scarcely possible that such explorations can have other than satisfactory results. A new saw-mill is being erected near old No. 2 pit, for the purpose of supplying the mine with square timbers, plank, &c.

The machinery at the Vulcan is, aside from the exceptions noted, the same as last year. With one or two exceptions the drums are too small, and other and larger ones will be an absolute necessity in the near future. Among the new improvements is a commodious blacksmith and machine shop—both departments of which are well equipped—and a large warehouse, in which the mine supplies of all kinds are safely stored. Under the present management the tenements have all been either painted or whitewashed, while the location generally has been cleaned up and renovated in such a way as to conduce in the highest degree to the health and comfort of the company's employes. The entire force numbers about 500 men, a larger number than will be necessary when the preparatory work now in hand is completed. A large amount of clearing is being done, besides other work of a permanent character, and when this is completed the force can be materially reduced without in the least impairing its efficiency or curtailing the annual production. Shipments began this year from stock piles aggregating 30,000 tons, and we look for an increased product, notwithstanding the fact that most of the preparatory work commenced since the first of the year, is yet far from being fully completed. Altogether, the mine is a most promising one. By this we mean to be understood as saying that, under the new system, it promises a great improvement over the very gratifying record it has already achieved. When the new shafts are completed, and the new system fairly inaugurated, an annual product of 100,000 tons will be the minimum rather than the maximum of its capacity.

THE CURRY MINE

commenced shipments this year from a stock-pile of some 9,000 tons, her annual product having been as follows:

Table with columns: Year, Gross Tons, Net Tons. Shows an increase of 221,822 tons.

No. 1, which was until recently considered the main deposit at the Curry, was found to be a large pocket, the rock coming in on all sides and in the bottom, cutting the ore out entirely. Consequently the pillars which had been left to support the roof have been taken out, and the pit has been permanently abandoned. The management met with another provoking disappointment in sinking a shaft 180 feet east of No. 1, where the diamond drill showed 13 feet of clear ore. In sinking to a depth of 100 feet the drill was found to have struck and followed a mere seam or leader of ore not over two feet thick, and the shaft was abandoned, though it is believed, and with good reason, that this seam must be a leader branching off from a main lens or deposit near by. What the mine has lost in this direction it has, however, gained in No. 2, in which the shaft is down 160 feet, the first 70 feet being perpendicular to a point from which the ore dips at an angle of about 20 degrees to the south. The pitch is to the west, and the lens, which is only 60 feet long on the 140-foot level, has lengthened out to 150 feet on the present bottom, and appears to be widening out rapidly going west. A drift has been run west on the 160-foot level, all the way, and still continuing, in ore. The miners are now pushing a slope west, following this drift, a cross-cut at the west end of which shows the lens to be 20 feet wide. This drift will be continued west as long as the ore is found, or at least to the west line of the company's tract, 500 feet further along. A new shaft 210 feet west of No. 2, is on its way down to the ore, which it will reach at a depth of a little over 100 feet from the surface, which last falls away about 50 feet just west of No. 2. If the ore is found continuing west any considerable distance beyond No. 3, another shaft will be put down, and still another, should it be found necessary. These developments give a new lease of life to the Curry, which, when the new shaft is down, will be in a condition to increased her production over any previous year. As it is, we look for an increase over last year's product, notwithstanding the fact that the new shaft will not be ready for use before the last of August. A new plant of machinery, consisting of a 60-horse power engine and two 4-foot Lane drums, has been ordered, and will soon be set up and put into operation. The mine gives employment to a force of about 65 men, all told. Wm. Ross is agent, and William Trebilcock, an experienced miner, mining captain.

THE BRIAR HILL MINE

is in section 9, immediately west of the Curry, and is the property in leasehold of the Briar Hill Mining company, the shareholders of which are principally heavy iron manufacturers of Youngs-

town, Ohio. The tract embraces 80 acres, on the east 40 of which, and adjoining the Curry, the mine is located. Work was commenced last year under supervision of S. P. Saxton, Esq., the Lumbermen's Mining company having previously done some work but without success.

The workings consist of a main shaft 190 feet deep, from which drifts have been run and the ore stoped out east and west on three different levels, the lower one of which is 25 feet above the bottom of the shaft, now on its way down to the 4th level. The trend of the formation is east and west, the ore dipping about 75 degrees to the south and the pitch being 45 degrees to the west. The foot-wall is a limestone lined with soap-rock, and the hanging black slate and jasper. East of the shaft the lens is small, but to the west it widens out to a width varying from 10 to 20 feet, the greatest width being at the extreme west end where the ore pitches under the rock-capping. On the first level there is only 30 feet of ore west of the shaft; on the second it lengthens out to 55 feet, and on the third to 80 feet. At this last point the lens is at least 20 feet wide, and there is a perceptible gain in thickness along its whole length. What it will make in the next lift remains to be seen, but there is every indication that it will continue to grow in size, the ore still continuing to pitch under the rock to the west, and rapidly growing wider in that direction.

Shipments will commence when the side-track now building is completed, from a stock-pile of not less than 8,000 tons. A trestle-work 400 feet in length connects the shaft house with the pockets at the side-track, over which the ore will be conveyed in tram-cars. The plant of machinery consists of a Root sectional safety boiler, a 7x10 duplex Rochester engine and two 3-foot drums. About 80 men are employed, only 30 of whom are miners. W. H. Mack is superintendent, and Thos. Williams, formerly of the Norway and Ludington, mining captain.

About two miles east of the most easterly pit of the Vulcan, on the east half of the south-west quarter of section 7, town 39, range 28, is the

STURGEON RIVER MINE

which is the property in leasehold of the Sturgeon River Mining company, of which John M. Douglas, Esq., is president, and G. C. Benton secretary and treasurer. Work was commenced early in 1881, at a point near the west line of the company's tract, where a shaft was sunk 25 feet in blue ore, from the bottom of which a cross-cut was made north 17 feet to the foot-wall and 20 feet south, all in ore, except about 2 feet of slate, which was encountered 8 feet south of the shaft. A drift 50 feet west is all in ore, but one going east struck the horse of slate, which curves round to the north and cuts the ore off. The shaft was then sunk to a further depth of 25 feet, where a cross-cut shows 18 feet of ore. An easterly drift, however, struck the horse of rock, which appears to be coming in and cutting out the ore in the bottom. Thus far this rock has not been cut through to see if the ore does not make around or beyond it, which we think should be done. About 100 feet south another shaft is down 100 feet, from the bottom of which a drift north, after passing through 20 feet of mixed ore and slate, cut 22 feet of clear blue ore of the very best quality. Into this ore a shaft or winze has been sunk 8 feet, but finding it difficult to keep the water out, work at this point has been suspended. It is now the intention to mine the ore out of the "pocket," as the owners call it, and drift from the bottom into the south lens. The trend of the formation is nearly east and west, and an examination of the shaft and drifts in the north deposit would seem to justify the belief which has obtained with the management that the dip is high to the north. This, we think, a mistake; our theory is that the dip is to the south, and a fault or throw in the formation has shoved the ore over in that direction at some depth below the bottom of No. 1 shaft. Further work will, we believe, prove this last theory to be the correct one—the huge pocket at No. 1 West Vulcan being an illustration exactly in point.

THE GARFIELD MINE

so-called, is in the northwest quarter of the northwest quarter of section 13, town 39, range 28. Some work of a desultory character has been done on this property, but as yet no well directed effort has been made looking to the development of a mine. The ore bearing formation certainly crosses the tract from east to west, and it is the generally expressed opinion that the property itself is not to blame for the absence of a fairly well developed and remunerative mine. It certainly has never had a fair test, and the fact that the little work done discovered indications of a most promising character, seems to justify the openly expressed belief that a game of "freeze out" is being played, in which the small shareholders stand a good chance of losing their few "chips" they have left.

Cornering with the south-east quarter of the south-east of section 11, in the extreme south-east corner of which No. 2 pit of the East Vulcan is located, is the

IRON RANGE MINING CO.'S

leasehold of 40 acres—the north-east quarter of the north-east quarter of

section 14, town 39, range 29. This may be considered, in view of its close proximity to the East Vulcan, and the promising character of developments now being made upon it, a most valuable property. The underground workings of the East Vulcan pit are gradually being extended eastward to the corner post, the trend being north of west to south of east, and the ore dipping to the south. That it extends across the line upon Iron Range Co.'s tract is proved by the fact that no true hanging-wall has yet been found in the East Vulcan, and that the same blue ore has been found 200 feet east of the line between the two properties, where a shaft is now going down partly in clean and partly in mixed ore. This shaft is down about 40 feet, the clear ore covering about 2 feet of the bottom on the south side, and the formation conforming in all respects to that of the East Vulcan. South of this shaft about 50 feet the diamond drill bored into 10 feet of clean blue ore at a depth of about 90 feet (boring at an angle of about 65 degrees to the north), when it was withdrawn. The drilling was done under the auspices of former lessees who considered the boring a sufficient showing upon which to predicate a sale of their option, they not desiring to engage in actual mining. It is believed that the ore in the shaft, which is precisely like that of the East Vulcan, and which is gradually making larger in sinking, is a leader to the deposit penetrated by the diamond drill, and which it is thought can be reached by sinking and drifting a distance of not more than 60 feet further. About 200 feet further east a shaft was sunk 107 feet in the slates, from the bottom of which a drift 57 feet south cut a formation in all respects identical with the underlying rock of the East Vulcan—mixed ore and jasper. For some reason the management suspended work in this drift just at a point where the ground was most promising, and, as we believe, within a short distance of the clear ore. The ore coming from the shaft first referred to is equal in quality to any found on the range, and the development of this property into a paying mine is a question of short time only—a belief of ours which is corroborated by the opinion of the best mining men in the Menominee district.

THE PERKINS MINE

comes next in order, going west on the range. A careful inspection of the underground workings reveals a marked improvement in this mine throughout their entire length. The horses of rock which were spoken of in our last annual review as being encountered in the upper levels, have entirely disappeared in sinking a single lift of 60 feet, while the ore body has gained very perceptibly in thickness. The workings, which are wholly underground, cover a length of nearly 600 feet, in a lens of ore which will average 25 feet between walls, extending from the Norway line east the distance named to a rock-crossing which is gradually cutting out the ore in the bottom. There are now three hoisting shafts—Nos. 1, 2 and 3—the number 2 of last year having been abandoned and the numbers changed accordingly. No. 1, the most westerly of these shafts, is located 140 feet east of the Norway line, and is down to the 4th, or 200-foot level, and sinking to the 5th. Here 15 feet of the floor of the third level has been left as a roof to the fourth, the shaft being cribbed up to the surface, and the vacant space above the roof thus formed filled in with waste material. The stopes in this part of the mine cover a length of 140 feet west and 100 feet east of the shaft, most of the ground on the 4th level yet remaining unbroken. When the shaft reaches the 5th level, toward which it is now well on its way, two more stopes 40 feet high and from 25 to 30 feet wide will be secured, when mine work can be prosecuted on both levels at one and the same time. The shaft is carried down 50 feet in each lift, though the stopes are only 40 feet, the bottom 10 feet of the shaft being left as a stump.

No. 2 (No. 3 last year.) is 200 feet east of, and down to the same depth as, No. 1. The stopes are about the same size, with about 40 feet of ground remaining intact west of the shaft, and 100 feet east of it, above the 4th level. This shaft is likewise on its way down to the 5th level. East of No. 3 shaft some distance the crossing of mixed ore and jasper occurs, and owing to its westerly pitch is gradually cutting out the ore, though there is every reason to believe it to be merely a wedge, beyond which, to the eastward, the ore will again be found. This crossing has not been cut through, for the reason that Captain Perkins has been afraid of getting too near the surface, and possibly cutting through into the sand drift, which is very deep and heavy in that direction. A drift into and through this poor ground will, however, be made on the 5th level, and the writer ventures the suggestion that the theory above hinted at will be found the correct one.

It is noticeable that while the ore body has gained at least 5 feet in thickness, since our last report, there is now nothing but clean ore between the walls, the ore itself having likewise improved in quality. New shaft houses have been erected at 1 and 2, which are now supplied with skip-roads in place of the buckets and derricks in use at the time of our last annual report. About 25,000 tons were raised between the close of navigation and May 1, and the superintendent estimates that he will be able to mine and ship

this year a product as large as that reported for 1881 in the following table:

1879	15,465
1880	42,106
1881	60,406
Total	118,077

No new machinery has been added the past year, except a pair of small hoisting engines for sinking. Capt. John Perkins remains in charge as superintendent, the mine giving employment to a force of about 160 men all told. Altogether, the mine is in excellent condition, and we shall not be surprised if at the close of the season Capt. Perkins, who by the way, is a most excellent miner, shall find the product several thousand tons larger than his estimate.

W. W. WHEATON has been appointed agent and Capt. Bale superintendent of the Alexander H. Dey mine, and work will be resumed at once. It is proposed to employ the diamond drill in further explorations, and also to do considerable test-pitting.

Formal announcement having been made that Hon. Isaac Stephenson, of Marinette, Wis., intends to offer himself as a candidate for the republican nomination for member of congress from his district next fall, the MINING JOURNAL hastens to say that it hopes his aspirations will be crowned with success. As a republican nomination is equivalent to an election in that district, this is virtually saying that the MINING JOURNAL would be pleased to see Mr. Stephenson a member of the next congress. His reasons for so desiring are that the upper peninsula would be sure to have in him a staunch friend in all things pertaining to its material interests—and no section of this great country of equal importance in wealth, population and richness of natural resources, stands in greater need to-day of friends in that body. Mr. Stephenson is a man of the people, practical, energetic, whose business capacity and tact qualify him to be highly useful as a representative to the constituency embraced in his district, as well as to his neighbors on this side of the state line forming its northern boundary. Since the writer's connection with the MINING JOURNAL, and before the gentleman's candidacy took tangible form, we have occasionally poked fun at him in connection with the place that we trust he is soon to fill, but wholly without intention or desire to disparage his claims, which are certainly superior to those of the present incumbent, both in point of locality and personal fitness for the office. Personally, in all the intercourse we have had with Mr. Stephenson, we have found him a pleasant, genial gentleman. If nominated he would carry his own end of the district by storm, and we doubt if any man could be chosen by his party better calculated to hold his party vote throughout its whole extent, besides drawing considerable support from the ranks of the opposition.

The farcical character of the proceedings in the star route cases was neatly illustrated Tuesday morning by an episode in the criminal court having them under consideration. When the Dorsey case was called, a deputy marshal informed the court that the defendant Dorsey could not be found, although diligent search had been made for him all over the country. Whereupon the presiding judge suggested that his name be called in the usual way, remarking that he might be in court. The clerk acted on the suggestion, when, to the profound surprise of the government's array of counsel and marshals, the much sought for personage responded to his name, one of his lawyers explaining that he had been in the city for ten days, right under the eyes of the officers who were seeking to arrest him, but who had failed to discover the object of their search, or even to get the faintest clue to his whereabouts. The action of Judge Wylie in this instance, and continuously throughout the case, denotes more of a knowledge of the methods of Dorsey's defense, and sympathy with that robust rascal's conduct, than are consistent with his position as the judge before whom the trial is to take place. It is not difficult to discern the drift and predict the outcome of a prosecution in which the temper of the court furnishes a key to the defendant's attitude of the culprit at the bar, while the apologetic manner of the government counsel indicates that they either believe they have no case against Dorsey, or know that they dare not push it to the extent of procuring his conviction.

Gov. Cornell of New York is entitled to high praise for at least one feature of his administration. He has been chary in the exercise of executive clemency in behalf of criminals convicted of serious offenses. The pardoning power has been so grossly abused of late years by those in whose hands the people had a man with nerve enough to say no to applications for its extension to unworthy subjects. There has been altogether too much maudlin sentimentalism worked into our system of criminal jurisprudence, and the intuitive perception of this fact by the people is the true explanation of the numerous lynchings in ordinarily law-abiding communities that have taken place within the past year or two. On this point the New York governor took occasion to make some timely observations the other day, in a message with which he returned to the legislature a bill providing that in criminal cases the accused should have the closing appeal to the jury. To this silly proposition the governor rightfully refused his sanction, remarking in his message that there has been a vicious tendency in legislation of late years towards making conviction difficult and punishment uncertain in criminal cases, and that further legislation in relation to criminal procedure should have in view the correction of this abuse rather than the aggravation of it. A little more backbone in our executives and judges is what we need just now to make men hesitate before embarking in crime as a business.

Ex-governor C. C. Washburn, of Wisconsin, died on Sunday at Hot Springs, Ark., of the effects of a paralytic stroke. He visited the springs in the hope of obtaining relief, but his disorder was too deep seated to yield to the healing influence of the waters, and he had been sinking steadily for some weeks prior to his demise. The deceased served one term as chief magistrate of the state, was a representative in congress from his district, and made repeated attempts to reach the U. S. senate, but invariably found that plum beyond his reach. He saw some service in the late war, but his more brilliant triumphs were not achieved on the field of glory. It was as a business man and politician that he earned wealth and honors. He was one of the richest men in Wisconsin, and much esteemed for the use he made of his wealth. His funeral occurred on Thursday.

It is announced from Washington that the government is seriously considering the advisability of disarming the Indians. The government will have a more perplexing problem to solve after deciding to do this, if it should so determine. It will be then in order

to settle on how the disarmament shall be accomplished. Unfortunately the natives are less docile than the Chinese, and the question at issue is not one that can be disposed of by the fiat of a department chief, or a congressional enactment. When it comes to forcing Lo to give up his gun we greatly fear the unruly rascal will manifest a disposition to present it muzzle first, and that the government's agents in the transaction will find that it's "loaded."

A petition to the president, asking for a stay of sentence in Guiteau's case, on the ground that he is "helplessly insane" and has been so for twenty years, is circulating among the physicians of eastern cities, and, it is stated, is receiving many signatures from members of the medical fraternity. There is but little doubt that Guiteau is mentally unbalanced, but it will be hard to make people believe that his knowledge of right and wrong was not sufficiently good to render him morally responsible for his crime, and, therefore, legally amenable to punishment. It is a rather date day to raise anew the question of his insanity.

Senator Mitchell's kick against the Cameron machine in Pennsylvania promises to be wholly ineffective. President Arthur recognizes the machine, and will permit boss Cameron to distribute the patronage, instead of dividing it between him and Mitchell; hence the latter's revolt actually strengthens Cameron instead of having the expected contrary effect. A man who would live in politics now-a-days must be content to swim with the stream. If he tries to battle against the current he goes to the bottom, sure!

Petroleum gas is the coming illuminator, it is predicted. A method of producing it from the crude oil has been invented, by means of which an excellent article, fully equal to coal gas for illuminating purposes, is obtained at a cost not exceeding one quarter the price for which the latter can be furnished. The machinery required for its manufacture is also much cheaper. This is good news, if true. What the world wants now is cheap light, and plenty of it, on all subjects.

Major Clark is sanguine that Manistique will have a railroad within three years, although the company to build it has yet to be organized, the route thought of, and the business to sustain it created. The major seems to have a disposition somewhat akin to Mark Tapley's—he comes out strong under the most discouraging circumstances. The MINING JOURNAL hopes he will get his railroad—if he is entirely certain that his peculiar temperament could withstand so much happiness.

A state convention of the prohibition party has been called to meet at Jackson, June 28th. It will nominate a state ticket, choose delegates to a national convention to be held at Chicago, and do divers other silly things, after which it will do one sensible thing—i. e. adjourn. The form of lunacy which manifests itself in a mania for prohibition is strangely like religious insanity in one respect—it is apt to be incurable.

Though the Dublin police have strenuously exerted themselves to capture the assassins of Lord Cavendish and his under secretary, they have made but little progress, and it actually looks as though the miscreants will give Justice the slip—for the time being at least. It seems almost incredible that this can be, yet such is the aspect of the case at latest advices.

President Arthur is experiencing some difficulty in selecting the members of the tariff commission, he confesses. We greatly fear his excellency is not a constant reader of the newspapers. There isn't an editor from Maine to Oregon who could not name the proper men to compose the commission on an hour's notice.

BUSINESS NOTICES.

NOTICE TO TAX PAYERS.—The assessment roll of the city of Marquette for the year 1882, will be open for inspection and review at the city hall on Spring street on Monday and Tuesday, May 22d and 23d, from 9 o'clock a. m. until 6 p. m. SAMUEL E. BYRNE, City Assessor.

BOCK BEER.—Meeske & Hoch's bock beer will be on tap May 27th and 29th.

JUST RECEIVED, a fine lot of one horse platform spring truck and delivery wagons, built by B. F. & H. L. Sweet, of Fond du Lac, men who thoroughly understand their business; and I can safely say that these are the best trucks ever offered to the public in this country, and for the least money. Parties will please call and see for themselves, and be convinced of the above statement. T. MORGAN, Marquette.

THE Bock Beer from Milwaukee branch brewery, on tap May 27th to 29th.

WANTED.—A good reliable man who needs a good business place on Front street. Basement of building 27x35 feet and 14 feet high. Main salesroom same size and height. Store can be got ready in 60 days. A lease for two or three years will be given. Enquire of EDWARD FRASER.

A FIRST-CLASS Piano at low figures on easy terms. See Conklin. 698tf

BOCK BEER! Bock Beer! Bock Beer, from Meeske & Hoch on tap, May 27th and 29th. 722w2

ORGANS sold for easy payments by Conklin. 717tf

\$300 REWARD.

I will give \$300 for the arrest and delivery to me at place of arrest of Ted Gaffney and John Casey, both from Negaunee, Marquette Co., charged with assault with intent to kill, and who broke jail at Marquette April 29th, 1882. Gaffney is about 25 years old, 5 feet 9 inches high, weight about 170 pounds; is light complexioned, hair reddish cast; small mustache, scar of sore on first finger of right hand; lately night watchman of Negaunee. Casey is about 20 years of age, 5 feet 10 inches high, weighs about 165 pounds; is light complexioned, light brown hair, narrow forehead, large mouth, skin freckled. I will give \$200 for any information that will lead to Gaffney's arrest. JOHN JEFFREY, Sheriff of Marquette Co. Marquette, Mich., May 1st, 1882. 720tf

NOTICE! Mining Men I have a few of Dressler's maps for sale. First come, first served. W. E. TYLER, Republic, Mich. 721w2

For fine decorated wares, lamps, &c., call on E. O. STAFFORD & BRO. 714tf

JAMES MORGAN, Milwaukee, has this season a larger and more varied collection of the best foreign and domestic dry goods than hitherto. His ladies', misses', children's, boys' and youths' shoe department is a great success.

STAFFORD BROS. have just received and opened a fine stock of white wares, which they are selling at extra low prices.

BEFORE buying from traveling agents or sending away for a Piano or Organ, no matter whose make, get prices from Conklin—he will save you money. He guarantees as close prices as anyone can offer.

THE popular crockery store of Stafford Bros. is the place to purchase your crockery and glassware this spring. 714tf

"ETCHING ON LINEN."—Whiting's Decorative Indelible Ink is specially recommended as "The Only Ink" for decorating Doyles, Splashes, Ties, Handkerchiefs, Shams, Etc., with Etching or Artistic Marking. Case containing ink, preparation liquid, pens and directions, is sold for \$1.00. Your orders are invited by MISS K. E. EVERETT, Marquette, Mich. 719w6

WHEN you buy a Piano be sure and buy from a responsible dealer who will guarantee the manufacturer's warranty. Call at CONKLIN'S.

WAGONS.—B. F. & H. L. Sweet, of Fond du Lac, Wis., are now building a very fine grade of wagons especially adapted for LUMBERING and MINING purposes, with their patent underdraw and tongue balance, which is a great improvement over the old style wagon on rough roads. They are also building lumber trucks, carts, platform spring wagons, buggies, &c. The above wagons are built of the very best of stock and fully warranted in every particular. Sample wagons can be seen at the COMMON SENSE SLEIGH STAND. All orders promptly attended to. T. MORGAN, Agent, Marquette, Mich. 714tf

ALL druggists sell Tar Honey for colds. 716w2

"PINE LANDS."—If you have good pine lands you will sell, write to or call on ROBINSON & FLINN of Detroit, Mich. 705m6

TOWN TALK.—Tar Honey cures cough.

Don't buy cheap, miserable organs when you can get a Mason & Hamlin on better terms from Conklin.

Stop that cough with Tar Honey.

THE best cough medicine is Tar Honey.

DRY SLAB WOOD, \$2.50 a cord. Leave orders at Ransom, Burtis & Marsh's saw mill, or at store of Westlake & Brouson.

GRAND FREE WIRE ASCENSION

Takes place at 1 o'clock. Don't forget the day.

DIAMONDS!

THE LAKE SUPERIOR SHIP CANAL, RAILWAY AND IRON CO.

450,000 Acres of Land in the upper peninsula of Michigan for sale or lease.

IRON MINES, COPPER MINES, SILVER MINES, SLATE QUARRIES, MARBLE QUARRIES, SANDSTONE QUARRIES, MILL SITES, WATER POWER, FURNACE LOCATIONS (with fuel), PINE TIMBER, CEDAR TIMBER, POPLAR TIMBER, HARDWOOD TIMBER,

1,500,000,000 feet of PINE TIMBER owned by this company.

These lands were selected by experts, for mineral or timber, at a time when but very little land had been purchased from the Government in their vicinity, consequently the lands of the company are invariably the most desirable for either minerals or pine or other timber in the district in which they lie.

enormous Iron Range, Gogebic Iron Range, Ontonagon Copper District, Silver District of Iron River.

THE MINERAL LANDS of the company are now offered for lease, on reasonable terms, and options given for purposes of examination. Eight of the best and largest mines in the Menominee iron district are on the lands of this company; i. e. East Vulcan (two mines), New Vulcan, Curry, Norway, Cyclops, Ludington, and Sturgeon—and this number will undoubtedly be increased during the present year. For terms, lists, etc., apply to J. M. LONGYEAR, Agent, Marquette, Mich. 610y

Englund, additional homestead entry, No. 231 for the south 1/2, north-east 1/4, section 13, township 46, north range 23 west, and names the following as his witnesses, viz: Christian Nielsen, Duncan Matherson, Yalman Banamun and Bernhart Specker, all of Chocoyau township, Mich. 718w5 H. H. STAFFORD, Register.

NEGAUNEE.

We will circus next Tuesday.

The marshal is after the poll tax.

The infant daughter of Mr. and Mrs. Ed. Beyer is dead.

The fronts of Thoren and Jacobson's stores have been newly painted.

HON. EDWARD BREITUNG and family left for the Mt. Clemens water cure on Tuesday.

MR. E. A. CULVER, agent for the new portable steam drill, has gone to Cleveland for a week.

GERSHAM (CASH) JONES, the Chicago produce commission dealer, has been with his friends in this county during the week.

AUGUST OLSON is now in his new building, and has one of the best furnished saloons in town. He had his opening last Saturday night.

TIMOTHY NESTER, the Ontonagon agitator and wind bag, was among those who were sheltered at the Breitung house on Monday night.

MORSE BROS.' store is literally crowded with new goods, and is very tastefully decorated. Their stock should be seen by everybody and their friends.

THE firemen's ball, given in Winter's hall last evening, was well attended, and, by those present, is pronounced to have been enjoyable—unanimously so.

THE rush for elegant wall paper and ceiling decorations still continues at L. D. Cyr's, but there is enough paper left to decorate every home in the city.

HENRY LEE began sprinkling Iron street early in the week, and dust has not been allowed to get the upper hand. Merchants should pay liberally for the luxury.

MRS. CAPT. HENRY MERRY and daughter, Miss Minnie, were passengers on the down train Tuesday. They go to Ohio and Pennsylvania for an absence of six weeks.

BRICK manufacture has already commenced at the yard of Jacobs & Pierce, in the south part of the city. The clay is of fine quality and only first class bricks will be turned out.

THE work of cleaning the streets, alleys and back yards of the city goes on under the direction of marshal Johnson, who, by the way, is giving good satisfaction as a city officer.

MR. JOSEPH WINTER has let the contract for the building of his new residence to Mr. Hampson Gregory, of Marquette—than whom no better builder is known in these diggings.

FOREST fires are raging in the woods about Cascade, and the entire force of miners at both the Pittsburgh and Lake Superior and Wheat mines have been fighting the flames since late Wednesday night. As yet the location buildings are untouched.

WORK was commenced on the new Neely block last Monday, and it will be pushed from now until its completion. The building is to consist of two fine stores and a society hall overhead. The hall will be especially adapted for the use of secret societies and public meetings.

THE common council has ordered that the city lock-up be repaired, and that much used hostelry will accordingly be furnished with new iron doors, gate bolts and bars, and made strong enough to hold prisoners—a condition it has never before been in. This is, indeed, an age of reform.

MR. AND MRS. N. LONSTORF went to Milwaukee on Tuesday, their purpose being to select and arrange for the purchase of a residence in that city, whither they propose to move in a few weeks. Mr. Lonstorf is an old, much esteemed and valued citizen, whose departure will be generally regretted.

LITTLE'S "World" combination is billed for the 27th and 28th insts. at Winter's hall. The company is said to be far above the average of troupes coming this way. The play it is to present—"The World"—is just now very popular in dramatic circles. The company will undoubtedly have good houses here.

EDWARD LOBB is making preparations for the wrestling tournament to be held in his backyard on the 26th and 27th insts. A grand stand (amphitheatrical) has been erected around the ring, and everything done to make the coming event a success. The best Cornish muscle on the upper peninsula will be present, and the prizes offered aggregate \$170.

NEXT Sunday will be observed as missionary day by the Methodist Episcopal church in this city. The pastor will deliver a mission sermon in the morning, and in the evening a service of song and short addresses has been arranged for, to be participated in by the choir, and Revs. Lennox, the pastor, Bigelow, of Ishpeming, and Parrish, of Marquette. All are invited.

KILLED.—While engaged in making a flying switch for a passing train on the Saginaw branch of the Cascade branch of the C. & N. W. R'y, on Thursday forenoon, Charles Nickerson, a brakeman, slipped under the train and had his right leg cut off just above the knee. He died in five minutes. His family lives in Iowa, where his remains will be forwarded.

UNCLE TOM'S cabin was hacked at in a beastly way by a set of amateur dramatists, styling themselves "The Macready theatrical combination," in Winter's hall last Wednesday evening. There were some 150 persons in the hall, all of whom came away with more than a stomach full. The "combination"—whatever it is, is a traveling theatrical amusement, all except the dogs, and they are mongrel curs.

THE Swedish Lady Quartette gave an entertainment of song in Winter's hall Thursday evening, only a medium sized audience being present to hear them. Barring the monotony of the thing of course we mean the entertainment, it will compare favorably with any affair of the kind ever presented to a Negaunee audience. The ladies deserve good receptions everywhere.

DR. L. D. CYR and family returned home from California on Sunday, having spent nine days on the home trip. The doctor expresses himself as greatly pleased with his sojourn on the Pacific slope. Being a keen observer he has stored his mind with much useful information in regard to that country, and those fortunate enough to obtain a half hour's audience with him are well repaid, for they feel as if they had been there also, so vivid are his descriptions.

HERE'S fun for the young man and the coy and gentle maiden, as well as the small fry of the town. Prof. H. N. Vaughan has made arrangements for the organization of a dancing class, the date of the first meeting being fixed for Tuesday, May 23d, in Winter's hall. The juveniles will meet the professor at the hall at four o'clock in the afternoon, and the young people's class will assemble at the same place at 7:30 in the evening. The term will consist of ten lessons, one to be given each week. The professor has spent the past three summers in Marquette, where he is much esteemed as a

tutor, and where he each year has large classes in the upper circles of society. As teachers of juveniles the professor and his wife are especially successful, and we doubt not that a large class will be formed here.

THE breaking of the fire engine on the occasion of the Morse Bros.' fire, led to a meeting of the common council, which was held on the following evening, the purpose of the same being to arrange for the protection of the city during the time occupied in repairing the disabled engine. At the suggestion of alderman Merry, the council has agreed to attach a No. 6 Knowles pump to the boiler of the fire engine if it can be made to work. The damaged portions of the engine are to be sent to the Sibley manufactory for repairs, and at least six weeks will elapse before the machine can be got ready for use. The fire and water committee of the council will inquire into, and report at the next meeting on, the feasibility of the immediate laying of water mains from No. 7 pit of the Jackson mine, along Iron street to the Breitung house, these pipes to be laid as permanent features of the new water system—that surely is to be.

THE board of review, which same is made up of the mayor and common council, sat on assessor Kirkwood's books in more ways than one at the Monday and Tuesday meetings. The total assessment of city property, including all the mines, amounted to about two million and a half dollars, and this amount has been reduced some \$300,000 by the action of the board. Much "kicking" was done by mine owners and property holding citizens, all of whom went for the assessor in a manner that would cause an outsider to look with anything but envy upon that gentleman's official position. The result of all this kicking was the reduction in the total amount assessed, as noted above. The MINING JOURNAL believes that assessor Kirkwood has striven to make a just and equitable assessment of all property at its actual value, as the law demands, and the roll as completed by him was no higher in its valuation of property, and in many cases not so high, as the assessment in neighboring cities. The rolls will come before the supervisors for final action, when it will be seen who was right—the assessor, or the local board of revision.

ON THE RIGHT SCENT.—At a special meeting of the common council, held Monday evening last, besides some business of minor importance, the subject of water-works received such a boost from the mayor and several members of the council, that there is little doubt in our mind but that this much needed improvement will soon be an accomplished fact. At any rate, the mayor has appointed a special committee, consisting of assessor Kirkwood and aldermen Maitland and Merry, to enquire into the subject, and report on plans and expense at some future meeting, when the matter will be decided. Negaunee has several sources of water supply, the least expensive and most accessible of which is No. 7 pit of the Jackson mine, which is so situated as to be easily turned into mains running through the city, supplying a never failing abundance of the purest water. The members of the committee are all progressive men, who will recommend only what is calculated to benefit the city, and they will be strongly aided by mayor Breitung, who has his heart in the work. The other members of the council are with the mayor, and will not fail to support any feasible plan that may be recommended. The voters of the city will also do their part when the time comes for them to act.

BLAZES.—At a little past five o'clock on Tuesday evening, fire was discovered on the roof of Morse Bros. & Co.'s warehouse, just south of the M., H. & O. railroad. The alarm, which was made instantly, had the effect to bring the members of the fire company out promptly, and very few minutes elapsed before the hose was run up the street from the engine house to the scene of conflagration, and in five minutes from the time the fire was first discovered a stream was playing upon the burning building. Just when the fire showed signs of being got under control, however, the steam piston broke in the cylinder of the steamer, and well, it ceased to scatter dampness, and then the fire flared had it all his own way. When it became known that the engine was broken beyond possibility of immediate repair, the efforts of the gathered crowd, who until then believed all would be saved, turned in the direction of getting out the contents of the building, leaving the fire to do its worst. Besides an immense stock of grain and hay, the Morse Bros. used part of the building as a warehouse for the different goods dealt in by the firm, a large portion of which were saved, though in a much damaged condition. The wing on the south side of the building was used as a dry house by the employees of the Pendill mine. In the building were also stored the household goods of Rev. H. E. Davis, S. C. Hinsdale, Esq., and J. M. Gannon, much of which were got out in a damaged state. One room was used by Mr. Austin B. Morse as a sleeping apartment, and he lost a large number of books and all his clothing, besides a valuable coin collection of many years gathering, and which was worth \$200. The fire raged fiercely for over an hour, and at the end of that time the building, which, by the way, was little more than a public eyecore, was in ruins. It was owned by J. P. Pendill, of Marquette. If insured, we have not been able to learn for how much, or in what company. Morse Bros. & Co. carried insurance on their stock to the amount of \$4,000, which will most probably cover their loss. Mr. Hinsdale had \$700 insurance on his goods, and will not lose if he gets his money. Rev. Davis and Mr. Gannon are out about \$800 each, and have our sympathy. It is particularly unfortunate that the engine gave out. But little more than a week ago the steamer did excellent work at practice, and the fault in its breaking must lie with the manufacturer in sending out an imperfect machine. Although eight years old, the engine has not done work enough to render it unreliable. The break will be remedied and in the meantime the old band engine will guard the city.

AMERICAN AND EUROPEAN DOCTORS.—It is said by some of the most celebrated physicians in Europe and America that the German Hop Bitters are one of the best remedies in use.

D. THOMAS' ELECTRIC OIL

MRS. J. G. ROBERTSON, Pittsburgh, Pa., writes: "I was suffering from general debility, want of appetite, constipation, etc., so that life was a burden; after using Burdock's Blood Bitters I felt better than for years. I cannot praise your bitters too much."

R. GRIBBS, of Buffalo, N. Y., writes: "Your Burdock Blood Bitters, in chronic diseases of the blood, liver and kidneys, have been signally marked with success. I have used them myself with best results for torpidity of the liver; and in the case of a friend of mine suffering from dropsy, the effect was marvelous."

BRUCE TURNER, Rochester, N. Y., writes: "I have been subject to serious dis-order of the kidneys, and unable to attend to business; Burdock Blood Bitters relieved me before half a bottle was used. I feel confident that they will entirely cure me."

E. ASENETH HALL, Binghamton, N. Y., writes: "I suffered with a dull pain through my left lung and shoulder. Lost my spirits, appetite and color, and could with difficulty keep up all day. Took your Burdock Blood Bitters as directed, and have felt no pain since first week after using them."

MR. NOAH BATES, Elmira, N. Y., writes: "About four years ago I had an attack of bilious fever, and never fully recovered. My digestive organs were weakened, and I would be completely prostrated for days. After using two bottles of your Burdock Blood Bitters the improvement was so visible that I was established. I can now, though 61 years of age, do a fair and reasonable day's work."

C. BLACKET ROBINSON, prop'r of the Canada Presbyterian, Toronto, Ont., writes: "For years I suffered greatly from oft-recurring headaches. I used your Burdock Blood Bitters with happiest results, and I now find myself in better health than for years past."

MRS. WALLACE, Buffalo, N. Y., writes: "I have used Burdock Blood Bitters for nervous and bilious headaches, and can recommend them for any one requiring a cure for biliousness."

MRS. IRA MULHOLLAND, Albany, N. Y., writes: "For several years I have suffered from oft-recurring bilious headaches, dyspepsia, and complaints peculiar to my sex. Since using your Burdock Blood Bitters I am entirely relieved."

FUN WITH THE BOYS.

ESCANABA.—The Port comes out square-toed and flat-footed in favor of Hon. Edward Breitung for the next representative in congress from this district.

A laborer on the ore docks was presented with triplets by his wife last week, and the Port wants people to accept this fact in evidence of the remarkable productiveness of the Escanaba country.

The carrying trade in ore is the best on the lakes just now. Prices are not high, but when grain goes from Chicago to Buffalo at 2 cents, ore hence to Lake Erie ports at \$1.25 is not bad.

The store of the Ford River Lumber company was burglarized one night last week, and a quantity of valuable goods carried off.

A fire in the kitchen of the Ludington house Wednesday morning of last week came near reducing by one the number of poor hotels in the village.

A state convention of the Ancient Order of Hibernians is to be held in this village, on Thursday, May 25, which will be attended by delegates from all the divisions of the U. P. and one from Detroit.

Owen Curran came in off the Ford river drive on Tuesday. Water was scarce, but about 4,000,000 will reach the boom within, say, ten days.

St. Ignace.—Saturday's Republican reaches the Mining Journal's exchange table Monday afternoon now—quite a change from the recent past, when it came to us via Chicago, and half a dozen other out-of-the-way places.

Last Tuesday, while a number of men were working on the ore dock cutting a sill, three of them were precipitated into the water and submerged six feet or more.

Bad weather has delayed work on the ore dock, which is not so well along toward completion as the company expected to have it by this date.

June the 30th is the date fixed for the track layers on the Mackinaw extension of the Grand Rapids and Indiana railroad to make the straits.

A collision on the Mackinaw division of the Michigan Central one day last week, destroyed four thousand dollars worth of rolling stock and other property, and delayed trains several hours.

QUINNESBEC.—In Saturday's issue the Reporter tells what its editor saw and learned about the old Breen and West Vulcan mines during a recent tour of inspection.

The same paper says that Sprague's minstrels gave excellent satisfaction wherever they appeared on that range, and drew full houses.

Ashley Hazard still "hangs out" in that country. Evidently range whiskey isn't the deadly article it was wont to be.

A little daughter of Jno. McKenna was caught in the turn table and badly hurt last week. No bones were broken, but the flesh of one leg was shockingly torn and mangled.

FLORENCE.—The News notes that "drummers and bummers" have been active there during the week. The bummers, like the poor, Florence has always with her.

Considerable building is going on in the village this spring—much of it being re-building, to replace structures destroyed by fire.

From the News we learn that one of the prominent citizens of Florence—Louis C. Mudge, is about to shake the dust of that place from his feet and depart for southern Illinois.

The town board of Florence has just purchased, in Chicago, through Messrs. Keight and Parks, all the requisite machinery and material for our new system of water-works.

OXFORD.—The Miner states that one of the justices of the peace at that place was engaged in two saloon rows last week, and insists that he ought to be removed from office.

Late rains have given the lumbermen a good driving stage of water, and the logs are coming into the boom quite boomingly.

A new hoisting engine for the Mass mine was brought by the City of Fremont on her last trip. It was built in a Chicago manufactory.

Captain Bowden's residence at the National mine was destroyed by fire Monday morning of last week.

Most of the furniture, and the clothing of the family were saved, but with difficulty, so rapidly did the fire spread. The house was the property of the mining company, and was uninsured.

The mill started up on Monday last week, but a leak in one of the boilers obliged it to shut down again. It was expected that the work of repairing the boiler would be completed so that the machinery would be again set in motion this week.

The Herald alludes to a Norway publication as "the Marquette Mining Journal's favorite exchange." Not an exchange of ours at all, by your leave.

It would be a fine thing if Uncle Sam could afford to supply the department in this section with water-proof mail bags. Our exchange when we finally get them would not then look as if they had passed through a flood.

A stage load of passengers down from the Nonesuch had a varied experience Thursday of last week. At Union River they found the bridge impassable, and attempted to ford at the mouth, some distance below.

They managed to rescue the team, but with great difficulty.

MORTGAGE SALE.—Whereas, default having been made in the payment of the money secured by a mortgage dated the seventh day of March, A. D. 1878, executed by Barney Martin and Flora Martin, his wife, to Sidney Adams, which said mortgage was recorded in the office of the register of Deeds, of the county of Marquette, in Liber four of mortgages, on pages 27 and 28, on the 18th day of March, A. D. 1878, at 4 1/2 o'clock P. M. And, whereas, the amount claimed to be due on said mortgage at the date of this notice is the sum of two hundred and eighty-four dollars and fifty-five cents, principal and interest, and no proceedings either in law or in equity having been taken to foreclose or recover the money secured by said mortgage, or any part thereof, whereby the power of sale contained in said mortgage has become operative: Now, therefore, notice is hereby given, that by virtue of the said power of sale, and in pursuance of the statute in such case made and provided, the said mortgage will be foreclosed by a sale of the premises therein described at public auction, to the highest bidder, at the front door of the court house, in the city of Marquette, in said county of Marquette, on the seventh day of June next at ten o'clock in the forenoon of that day, which said premises are described in said mortgage as follows, to-wit: All that certain lot or parcel of land situated in the city and county of Marquette, state of Michigan, known and described as lot number four (4) in Harlow's addition to the village (now city) of Marquette, No. 3.

FORWARD MARCH—THE PEOPLE ADVANCING ALL ALONG THE LINE.

Drs. Frothingham and Kingsley of the Grand Rapids English Medical and Surgical Institute, 65 Monroe street, have arrived in our city and have engaged parlors at the Summit House, where our many citizens now under their treatment can consult with them until 9 P. M., Friday, May 26th; also any who may wish can obtain the benefit of their accurate diagnosis of their diseases without questions and free of charge, thus giving every one the privilege of their unprecedented experience in their specialty, without the heretofore long journey to their Institute in Grand Rapids.

REMARKABLE CURE. This is to certify that I was confined to my bed for seven months, was given up to die by seven physicians in Ludington. Drs. F. & K. commenced treatment on April 10th, 1882. I have taken their English medicines one month, and am now able to attend to my business as usual. I consider them and their medicines wonderful, and their word to be relied upon at all times. I will answer all letters of inquiry with pleasure. THOMAS BISHOP, See Man of Ludington, Mich.

Another. I had been confined to my bed for two months, unable to be lifted from it. I had tried in vain all the Ludington physicians. Sent for Dr. Frothingham, of Grand Rapids. He came, found what I had been treated for did not exist, left me a course of his English medicines, and in two weeks I could walk in my yard. It is now 22 days, and I am attending to my business as usual. I would recommend all to them. ALICE DEWAR, Filer House, Ludington, Mich.

A thousand testimonials from Grand Rapids can be seen at their office at the hotel. More would be printed had we room, but we must desist. At Summit house until May 26.

Never Before! GRAND Clearing Out Clothing Sale. NEUBERGER'S Owing to a change of business my stock of MEN'S, BOYS' CHILDREN'S CLOTHING Will be sold from now until June 1st at first cost! 200 Fine Diagonal Suits worth \$24.00 and \$26.00 at \$20.00 and \$22.00 185 Fine Business Suits " 18.00 and 20.00 at 14.00 and 16.00 230 Fine Business Suits " 10.00 and 12.00 at 7.00 and 9.00 400 Fine all Wool Pants " 4.00 and 5.00 at 3.00 and 4.00 220 Cotton Pants " 2.00 and 2.50 at 1.25 and 1.75 50 Doz. Shirts and Drawers, 1.00 and 1.50 at .75 and 1.00 80 " " 75 and 1.00 at .22 and .50 150 Odd Vests, " 25 at 16 and 1.00 80 Dozen Cotton Hose worth 25 at 10 42 Cases Boots and Shoes, all kinds, at cost. Boys', Youth's and Children's Clothing at great bargains—and all new and stylish clothing. Now is your chance to buy good goods of all kinds cheaper than ever before offered at NEUBERGER'S The Clothier. N. B.—Beware of houses that blow about selling goods and getting suits made 25 per cent. cheaper than others can furnish them. Their game is to take your measure—and then take your money for ready-made goods procured from an outside ready-made clothing house, not tailoring establishment. "Give a blind horse the road and he will tumble in the ditch"—unless checked occasionally. So with a certain class of business men, who like to play second fiddle so well that they are willing to make it public. When merchants are obliged to sell under false colors truth is a bugbear to them; and when such make high-sounding statements and promises the public should remember from whence these come. If you want fair dealing, reliable goods, and the worth of your money every time, patronize a reliable house. If you need anything in the line of Men's, Youth's or Boys' Clothing, the place to get the latest styles and the best quality of goods for the least money is at the mammoth establishment of I. NEUBERGER, THE RELIABLE CLOTHIER.
