Invisible microbic growths enter the sebaceous glands, situated at the top of the hair follicles (Dr. Sabourand, of Paris, says the microbe usually enters the scalp in youth), here one colony after another is established, until finally, after months and sometimes years, there is dandruff, itching scalp and falling hair. The

Sebum also solidifies, causing dry. lustreless and brittle bair. Destroy this microbic growth with Newbro's Herpicide and protect the hair against re-infection, and it will grow as ma-
