Ishpeming Department

(Additional Ishpeming on Page Two)
BODY CUT IN TWIN.
Ishpeming Boy Dies Under the Wheels of an Ore Train.

Struck by an ore train on the tracks of the Lake Superior & Ishpeming company, Segard Eckoff, a twelve-year-old boy, son of Segard Eckoff of the Cleveland location, met a horrible fate last evening. He went under the wheels and was cut in twain. The boy, with his brother and a number of playmates, had been swimming in the pond in the L. S. & I. yards. Returning toward, he attempted to cross the tracks in front of the approaching train, and stumbled and fell across the rails. Before he could rise, he was struck by the engine and was horribly mangled. Coroner Prin was notified of the fatality and summoned a jury. The inquest will be held Thursday afternoon.

CAPTAIN OFFICER DEAD.
Well-Known Mining Man Passed Away Suddenly at Parrel, Mexico.

Mrs. John Sendell received a letter yesterday from her sister, Mrs. William Officer, advising that her husband, Captain Officer, formerly of this city, had died suddenly on the 3rd at Parrel, Mexico. Apoplexy was the direct cause of death, but the captain had been a sufferer from heart disease for some years past.

Captain Officer was one of Ishpeming's pioneer mining men, as having located in this city about 1870, taking a position with the late Robert Nelson at the Barnum house. He remained there for some years and superintended the plumbing and other mechanical work during the construction of the Nelson house; he was later placed in charge of Mr. Nelson's mine in the northern part of the city, remaining in this position until he left here about sixteen years ago for Tracy, Minn., where he engaged in farming. A few years prior to his departure the Nelson mine passed into the control of the Cleveland Iron Mining company and was later known as the Detroit mine. About five years ago Captain Officer sold out his farm in Minnesota to take the superintendency of a gold mine at Parrel, Mexico. About five months ago the captain's health began to fail and on the advice of his physician he went to his Green Forest, Ark. home, leaving there a short time ago to resume his work in Mexico. His health was improved and his death was entirely unexpected.

Captain Officer was a good mining man, as well as a thorough mechanic. He was married in this city to Miss Scholander, who, with five children, survives him. One of their daughters married Ed. Blackwell of this city, who now resides in Mexico; two other daughters were graduated from the Green Forest college a few months ago. Mrs. Officer has advised her sister that she will likely sell her farm in Arkansas and return to Ishpeming to reside. The deceased was about sixty-five years of age.

Hotel Williams, Grand Island, Munising, Michigan, has opened the season with a good patronage. Three two-room cottages with fire places have been added to the equipment, enabling the hotel to handle the increased patronage.

CITY WATER IMPROVED.

Sanitary Engineer Has Removed Vegetable Growth at Lake Sally.

J. M. Caird, a sanitary engineer, of Troy, N. Y., has completed the removal of a vegetable growth from the five lakes from which Ishpeming receives its water supply. The growth is known as "Tabellaria" and it is only in recent years that the secret of eradicating it has been known.

Every summer since the city water has been procured from the present sources a vegetable taste has been observed at certain times. The board of public works has had correspondence with the department of agriculture at Washington, also Mr. Caird, relative to a remedy for its removal. The method recommended by the department was similar to that employed by Mr. Caird. As soon as the change in the taste of the water was observed, Mr. Caird was sent for, and he has been successful in removing the objectionable growth. The tabellaria was removed with copper sulphate, the vegetable taste disappearing within twenty-four hours after the treatment.

On finishing his work Mr. Caird sent samples of the water from the several lakes to his laboratory in Troy for a chemical examination. Samples from each lake have also been sent to the department of agriculture at Washington. Mr. Caird said that the tabellaria that appears in the lakes in the future can be removed by the board of public works without much expense, as its superintendence has been fully instructed as to how to use the copper sulphate. The growth has no roots, as it thrives and floats near the surface of the water. The remedy for removing the tabellaria was discovered four years ago, after long experiment by the department of agriculture and leading sanitary engineers of the country. The tabellaria appears in different forms, requiring different doses to kill it. No two of the lakes here required exactly the same dose. The amount of sulphate needed in each case was determined by microscopic and chemical examinations.

The tabellaria is dormant in the winter, but it invariably comes to life in the spring. "Most of the lakes and reservoirs from which water supplies are obtained throughout the country have a growth of tabellaria," said Mr. Caird. "The weed usually makes its appearance every summer, but where it is properly treated as soon as it appears it causes little or no trouble, as its growth can be killed in from twenty to forty-eight hours. I have carefully examined the water since the treatment of sulphate and I have found no trace whatever of the tabellaria and I do not believe that it will re-appear this season. The treatment is simple, and the superintendent of the board of public works will have no difficulty disposing of the weed. Your board of public works should be commended for the manner in which it protects the city's water supply. The fencing in of the lakes and guarding them is a good thing. I do not believe that a disease germ of any description can be found in the water of any of the lakes from which your supply is obtained. A large percentage of the typhoid fever epidemics throughout this country are caused by contaminated water."

"I travel extensively throughout the country, doing work similar to that which I performed here, and I am regularly employed by forty different water companies of the United States. I am

employing eight men in my Troy laboratory. They are kept busy testing water sent in from various parts of the country, and some of my other offices are also doing similar work.

"Your water system is in much better condition than the systems in most of the smaller cities I have visited during the past few years. Your board of public works has introduced the proper methods for the protection of the water."

bled to DEATH.

The coroner's jury in the case of the late Mrs. Robert Mytton, 437 John St., returned a verdict yesterday to the effect that he had bled to death. A pool of blood was found beneath his injured leg and a post mortem examination revealed the fact that an artery in the leg had burst. The funeral will be held this afternoon.

BAD BURN QUICKLY HEALED.

"I am so delighted with what Chamberlain's Salve has done for me that I feel bound to write and tell you so," says Mrs. Robert Mytton, 437 John St., Hamilton, Ontario. "My little daughter had a bad burn on her knee. I applied Chamberlain's Salve and it healed beautifully." This salve allays the pain of a burn almost instantly. It is for sale by The Stafford Drug Co.

ANNUAL PILGRIMAGE EXCURSION TO CANADA.

Annual Pilgrimage to the Shrine of St. Anne de Beaupre, Quebec, will leave via the South Shore every day July 13th to 19th, inclusive. Fare for round trip \$25. Good for stop-over at Ottawa, Montreal and other intermediate points. Return limit Aug. 31st. Through sleeping cars. Apply to ticket agents.
