

# THE MANISTIQUE COURIER

J. H. MacNABOURN, Editor.

MANISTIQUE, MICHIGAN

A man's love for liquor frequently makes the world gyrate.

Failures should be used as stepping stones to future success.

A few days after a man weds an angel she always sheds her wings.

Experience teaches people lots of things they would rather not know.

A single spade in the hand is worth more than a tray of diamonds in the pack.

It's surprising how much a woman can say about herself without telling anything.

Some actors find the glare of the headlights more annoying than that of the footlights.

The war-like reporter blows up a lot of sparkling-tubes in his efforts to capture information.

A married man says there is evidently no end to his wife's mind, as he gets a piece of it daily.

A man is apt to suffer less from a cold than he is from innumerable remedies suggested by his friends.

A girl's features may be stamped on a young man's heart, but it's always her complexion that looms up on his coat collar.

An alliance between France and Spain would give us the friendship of the little German empire to such an extent that he would emanate in our behalf in a loud voice.

"Paris is" sometimes called it when people who are rich, idle and dissolute break down in life and mind. Often it comes near enough to insanity to warrant their being placed in an asylum, where ample attendance is given at high prices. A nurse in one such institution says she has never wished to know how many such getheries are in our care, and in some cases their friends give out that they are "gone abroad."

The determined effort of a New York temperance society to suppress the military character in its state cap, is supported by reports from the English army in Africa, where the recent brilliant victory on the Althara was won by a force composed exclusively of total abstainers. For months Sir Herbert Kitchener has drunk all liquor to his troops, with the result that in one of the deadliest climates, no army has ever had so little sickness, been in such magnificent physical and moral condition, or won hard-fought battles after four months of such extraordinary character. No wonder that the total abstinence principle in warfare is being endorsed by military authorities throughout the world.

The strawboard trust will have to make a defense before the Indiana legislature. About once a year the factories empty their reservoirs into streams on which the industries are situated and kill all the fish in the water. The United States court has been appealed to and has enjoined some of the factories from polluting streams, but other branches of the trust continue to empty poisons into rivers, and the local officers of the law seem to be powerless to prevent it. Only this week the factory at Carthage emptied its reservoir into Lake Michigan, killing millions of fish and interrupted the spawning. The governor has taken notice of the destruction of fish and announced that if he should find any industry with the coming legislature he will pass a law which will stop the pollution of running streams by these factories.

In a recent Compendium the editor makes a statement in settling a woman's charges of seduction which is puzzling. "Crystalline of intellectual and physical fitness," he says, "have placed the average woman of today at a disadvantage, in most things requiring energy or stamina, when ranged alongside the man, whose ancestors were accustomed to stronger life." Perhaps he means to say that men have one line of ancestors and women another line. Or possibly we are to understand that a man's mind and energy and stamina from the male side and a woman her interior energy and stamina from the female side. In the case the "crystalline" of intellectual and physical fitness" in woman would reflect weakness only upon her female offspring, and not upon the man. Mind, we cheerfully acknowledge man's superiority, but the writer's reasoning leaves us sorely detracted. We had always supposed that our ancestors had left their good and evil traits to us men and women with commendable impartiality.

A paper of Porto Rico proposes to burn Washington and New York, and bids that by way of further indemnity the Spaniards will demand the wives and daughters of the yankee pigs. It is such a pity that the editor don't think of that before it was too late.

The laws of Mexico provide that a woman who wishes to take a second wife must present a certificate signed by the first husband to the effect that he is willing, and he must also be able to express consent at the second wife and her parents.

# FIELD OF MISSIONS.

QUAINT AND PICTURESQUE THINGS AROUND.

Why a Native Was Very Thirst After Teaching a Little Child Worshipping the Tree at Early Dawn and Evening.

(Special Letter.)

THEY are reproduced of a photograph of a group illustrative of life in the mission field. Missionaries are quaint and picturesque, and had they only time to devote themselves to literature, they might well give to the world some of the most thrilling romances and extraordinary stories that were ever published.

In some places the raw material is very unpretentious. At Marha, India, the Rev. E. D. Price found that at first the natives could only be attracted by pictures, musical boxes and toys, including a noble specimen of Jack-in-the-box; but even then they only came to see the show. Mr. Price tells many curious stories of the natives there. He once saw lying in his path a kind of toy cart two and one-half feet long, and he asked his servant to bring the thing to him. The man seemed half afraid of it, however, and mumbled something to the little white, bowing the while. Mr. Price afterwards discovered that this cart was provided specially for a demon who was supposed to have caused an epidemic in the neighboring village. This demon was thought to get into the cart by sputtering and drive off towards the jungle to some other village.

Missionary churches built in the wild parts of the earth are interesting objects in themselves, and the photographs reproduced here speaks very eloquently for itself. A crowd of natives is bringing in mud to be used for plastering the walls of a church at Marha, a station about 150 miles inland from the coast east of Africa. The churches, like the houses in East Africa, are built only of palm poles and reeds, grass and

holes in the bottom, so as to allow the water to drop steadily on to the parched earth around the tree. When the shade of evening falls, a small lamp is placed near the sacred plant, and then the women come down and kneel before it, bringing flowers, fruit and rice offerings, and finally take some earth from the roots of the tree, and rub it on their foreheads. In some places a contrived brick pedestal is made with a hollow top, which contains a quantity of earth to hold the plant.

There are about 250,000 of these churches attached to 10,000 mosques made for United States troops and 100,000 for the Cuban forces. Only about half the material will be made in the small outposts or "camps," established, however, and this is pleasing to the local United Garment workers, who are further elated by the fact that every stitch will be sewn, every buttonhole worked and every thread fastened by regular union workers.

According to the terms of the contracts the 250,000 uniforms already underway must be done within thirty days. It is expected that further contracts will be given out.

When the establishment at No. 255 Broadway is full running order about 450 hands will be employed, and the daily capacity will be 2,500 uniforms, coats or blouses, vests and trousers complete. In order to put the work through at this rate, the men are fastened to long tables, each running the whole length of the building, have been put in, and all four stories above the street floor are crowded with operators. The use of steam in place of foot power to operate the machines, which hitherto have been adapted to a surprisingly small degree in the garment-making industry, will save 20 per cent of the effectiveness of each operator, and, of course, hastens the completion of the contracts by just as much.

Other devices for the saving of time, labor and strength have also been introduced, among them being an apparatus for the rapid pressing of the completed garments by hot steam-heated irons located on the top floor, and producing much less heat than the ordinary method of pressing with complete flatness was used over stoves. This improved method is entirely self-acting, of course; but like the application of steam power to the running of the machines, has been made use of by a small proportion only of the New York shops.

In another picture is seen a party of Uganda natives busily engaged in making a door for the church at Ngeevie. This church will seat fully 1,000 persons, for, as they sit on the floor, the congregation don't take up much room. In building a church, the poles are first put into the ground. Then long reeds of stout bamboo are placed on top of the poles in notches already cut for them. The roof of reeds is then put on, and next comes the thatch. The roof is made of mud, and is laid over the window and door ways. This way of building from the top" sounds very curious to American ears, but these people do it very skillfully, and are not fond of learning new fashions in building.

How picturesque these primitive methods are may be realized on glancing at the delightful "bed-rooms" of an East African mission church. The structure is made up of the usual palm, bamboo and reeds; but the beds are made of a single log of wood and carried up-country to a station and even ferried the natives—this would indeed make interesting reading.

BRINGING MUD FOR CHURCH.

The first ringer, a native of course—is the most vivid man in the country, and he is fully conscious of his dignity. The strange horde of half-naked savages that respond to the tones of this bell on Sunday and feast make a most extraordinary spectacle as they come crowding into the great, mysterious-looking church, edifying among the kneeling rows of poles, and then subsiding suddenly on to the vast mud floor.

In the courtyard of almost every Hindu household is found a small shrub, called the tulsi, and this plant is considered very holy indeed. Early in the morning the children are taken to the plant, and taught to kneel down before it, with their heads touching the ground, and the same process is repeated in the evening. From the middle of a pole, stretched over the plant, is suspended a small earthenware pot filled with water, and having a small

# TALMAGES' SERMON.

"WOMAN WRONGED" LAST SUNDAY'S SUBJECT.

From the Text Esther 1:11-15 as follows: "Hath Vasthi, the Queen, before the King with the Crown Royal, to show the King and Princes Her Beauty?"

We stand amid the palaces of Shalman. The pinnacles are aflame with the morning light, the windows are festooned and arched, the wealth of empires flashing from the grooves; the ceilings adorned with images of birds and men, and of gods of process and conquest. The walls are hung with shields, and emblazoned until it seems that the whole round of splendor is exhausted, such is a mighty host of architectural achievements. Golden stars shining down on glowing arabesque. Hangings of embroidered work in shades of blue, purple, and red, the sky, the greenness of the grass and the whiteness of the seafloor. Tapestries hung on silver rivets, wedding together the colors of marble. Pavilions reaching out in lines of blue and red, and repose, filled with luxuriant couches, in which every limb sink until all fatigue is submerged. These are not the least, and none of process and conquest at one swallow. Amazing spectacle! Each a rival of the slipping down of stairs of gold, the shroud of gold, and night black and inlaid with gleaming pearls. In connection with this palace there is a garden, where the flowers are of every color, and the fruit is of every kind. The garden is laid out at a haquet. Under the spread of oak and hedges and across the garden are arranged. The garden of honey, the garden of frankincense, the garden of Pomegranates, the garden of figs, the garden of lemons, the garden of oranges, the garden of apples, the garden of pears, the garden of peaches, the garden of almonds, the garden of chestnuts, the garden of walnuts, the garden of hazelnuts, the garden of pineapples, the garden of melons, the garden of watermelons, the garden of cucumbers, the garden of pumpkins, the garden of squash, the garden of eggplants, the garden of okra, the garden of green beans, the garden of lima beans, the garden of kidney beans, the garden of black beans, the garden of navy beans, the garden of chickpeas, the garden of lentils, the garden of peas, the garden of broad beans, the garden of fava beans, the garden of mung beans, the garden of soybeans, the garden of vetch, the garden of clover, the garden of alfalfa, the garden of timothy, the garden of ryegrass, the garden of timothy, the garden of timothy, the garden of timothy.

WHEN the establishment at No. 255 Broadway is full running order about 450 hands will be employed, and the daily capacity will be 2,500 uniforms, coats or blouses, vests and trousers complete. In order to put the work through at this rate, the men are fastened to long tables, each running the whole length of the building, have been put in, and all four stories above the street floor are crowded with operators. The strange horde of half-naked savages that respond to the tones of this bell on Sunday and feast make a most extraordinary spectacle as they come crowding into the great, mysterious-looking church, edifying among the kneeling rows of poles, and then subsiding suddenly on to the vast mud floor.

In the courtyard of almost every Hindu household is found a small shrub, called the tulsi, and this plant is considered very holy indeed. Early in the morning the children are taken to the plant, and taught to kneel down before it, with their heads touching the ground, and the same process is repeated in the evening. From the middle of a pole, stretched over the plant, is suspended a small earthenware pot filled with water, and having a small

holes in the bottom, so as to allow the water to drop steadily on to the parched earth around the tree. When the shade of evening falls, a small lamp is placed near the sacred plant, and then the women come down and kneel before it, bringing flowers, fruit and rice offerings, and finally take some earth from the roots of the tree, and rub it on their foreheads. In some places a contrived brick pedestal is made with a hollow top, which contains a quantity of earth to hold the plant.

There are about 250,000 of these churches attached to 10,000 mosques made for United States troops and 100,000 for the Cuban forces. Only about half the material will be made in the small outposts or "camps," established, however, and this is pleasing to the local United Garment workers, who are further elated by the fact that every stitch will be sewn, every buttonhole worked and every thread fastened by regular union workers.

According to the terms of the contracts the 250,000 uniforms already underway must be done within thirty days. It is expected that further contracts will be given out.

When the establishment at No. 255 Broadway is full running order about 450 hands will be employed, and the daily capacity will be 2,500 uniforms, coats or blouses, vests and trousers complete. In order to put the work through at this rate, the men are fastened to long tables, each running the whole length of the building, have been put in, and all four stories above the street floor are crowded with operators. The use of steam in place of foot power to operate the machines, which hitherto have been adapted to a surprisingly small degree in the garment-making industry, will save 20 per cent of the effectiveness of each operator, and, of course, hastens the completion of the contracts by just as much.

Other devices for the saving of time, labor and strength have also been introduced, among them being an apparatus for the rapid pressing of the completed garments by hot steam-heated irons located on the top floor, and producing much less heat than the ordinary method of pressing with complete flatness was used over stoves. This improved method is entirely self-acting, of course; but like the application of steam power to the running of the machines, has been made use of by a small proportion only of the New York shops.

In another picture is seen a party of Uganda natives busily engaged in making a door for the church at Ngeevie. This church will seat fully 1,000 persons, for, as they sit on the floor, the congregation don't take up much room. In building a church, the poles are first put into the ground. Then long reeds of stout bamboo are placed on top of the poles in notches already cut for them. The roof of reeds is then put on, and next comes the thatch. The roof is made of mud, and is laid over the window and door ways. This way of building from the top" sounds very curious to American ears, but these people do it very skillfully, and are not fond of learning new fashions in building.

How picturesque these primitive methods are may be realized on glancing at the delightful "bed-rooms" of an East African mission church. The structure is made up of the usual palm, bamboo and reeds; but the beds are made of a single log of wood and carried up-country to a station and even ferried the natives—this would indeed make interesting reading.

BRINGING MUD FOR CHURCH.

The first ringer, a native of course—is the most vivid man in the country, and he is fully conscious of his dignity. The strange horde of half-naked savages that respond to the tones of this bell on Sunday and feast make a most extraordinary spectacle as they come crowding into the great, mysterious-looking church, edifying among the kneeling rows of poles, and then subsiding suddenly on to the vast mud floor.

**OUR SOLDIER BOYS.**

List of Officers of B. Co. and interesting notes from the Camp—Uniforms being issued—Boys Happy.

Life under the tents at Camp Eaton has now come to be routine and Manly Co. are rapidly getting seasoned for a campaign. That the life agrees with the boys is evidenced by the fact that none of them have been ill since arriving here.

Early to bed and early to rise is one of the mottoes here as will be observed by a personal visit to the arrangements of the various duties of the day.

Retreat, 7:30  
Tattoo, 9:00  
Taps, 9:00

Drill in the morning is by company, in the afternoon by battalion and regiment, and generally at 7 p. m. the different company officers take the boys out again for a short drill. This evening Orderly came marched the boys to the lake for a bath, it having been toward the past two mornings for such a diversion.

Monday, July 13, saw the boys hard at work shaping themselves into soldiers, a good way in celebrating the day for nearly all present. Gov. Pingree arrived at camp in the morning on his first visit to the regiment and received a "thundering" round of cheers as he left. He was met through the detachment of officers and soldiers. In the evening a large amount of fire-works were set off. Gen. White was fired from one of the islands in the little pond which in this country is called a lake.

Yesterday the Manistique Company set out outside of Camp Eaton on the road and other discommodities of the long journey were in excellent shape. Captains and Adjutants are busily engaged in drilling the men since their arrival. Will Burdick is acting as orderly sergeant and Archie MacIntosh as quartermaster. The company shingles as company cook and has varied the usual order of business by having all the dishes washed in the cook shanty by the detail.

Paul Frey saved an artery in his arm by severing it through one of the glass windows. He was sent back here, tied below Trout Lake, their train ran over and killed a man. These two accidents marred the pleasure of their trip somewhat but they report great receptions enroute. Mackinac City, Potosi, and other cities turned out on mess, and entertained the train with fire-works and bonfires several. Belts of that city endeavored to capture a number of the most looking boys on board. Shortly after arriving in camp, Guard Brown disappeared or rather, disappeared. He would receive a hot reception from the boys and only get half of him.

Round after round of cheers have been going up from the boys of the different companies during the week as news of the glorious victories of Sampson, Schley and Shafter have been received. Three German war vessels received this morning evaded great excitement and the 8th was more ready than ever for the fray. Just where this regiment will be sent is as yet more confidential than the Philippine Islands as its destination has been the talk of a large number here.

This morning the company letters were alloted and we drew "B" the Volunteer Co. is "I." It would be well to remember in addressing letters to many of the members of the first company to write them: Island Lake, Camp Eaton, Mich. "B" Co. 24th Regt. Michigan, Vol. Inf. of Sons of Veterans.

The Volunteers should be addressed the same excepting that it is "B" Co. and minus the S. O. V's.

Adjusting our company quarters is a

company from Callison, Eaton and Barry considers the members of which are somewhat unsteady. Last night a number of them were pitched down the regimental street-sight.

The Volunteers should be addressed the same excepting that it is "B" Co. and minus the S. O. V's.

Adjusting our company quarters is a

way to quarters. The men are nearly all of uniform size and is physically one of the very best in the regiment.

The muster in of B. Co. was not completed without a great deal of hard work, but Capt. F. D. Buckingham was equal to the occasion and by three o'clock the necessary men had been secured. Then came the muster roll, a very intricate and tedious affair containing all necessary information regarding the recruit and usually considered a day's work, but the clock dictated to the work succeeded in finishing it by seven. The mustering in of the company on Saturday makes Capt. F. D. Buckingham the first captain of the line—the second in the line of promotion to a majority. When it is taken into consideration that B. Co. was recruited in small squads all over the state while the rest of the companies were recruited in small territories and brought here already enrolled the vast amount of work necessary to complete the organization will be apparent.

Thursday and Friday the company had skirmish drill, extended order and a sham battle with the Alpena Co. Hard work all along the line is the order of the day and every day is a repetition of the one past.

The signal from Manistique for B. Co. under command of A. Todd arrived in camp Friday. Seymour Critchden who came with them decided to enlist with his brother Sons of Veterans, so joined Co. B and is now in the service.

County Treasurer V. E. Chappell was a visit-camp Saturday and was entertained by Co. I. The boys all enjoyed the Havanna at his expense.

Ell Bailey, who is now living with a daughter near St. Johns, came in on an excursion Sunday and spent the day with the Manistiquois boys.

Tommy, the inventor, the examination of the men in Co. I, Manistique Volunteer, commenced and will occupy the entire day. Leon LaPorte was examined by Stragen (Friday one day last week) and reported and immediately left for home where his mother is dangerously ill.

Frank E. Hehnka, who has been acting as clerk of B. Co., since his arrival here, has been permanently assigned to that position with rank of first corporal.

Several Manistique boys, members of B. Co. have received letters from home in which it was stated that it had been talked about Manistique that Wallace A. Lavigne who left the Sherbrook circus to go with the first signal only did so to get out of the country for nothing. At the request of his comrades in arms we wish to say that Private Lavigne is a respected member of Co. B and rated an excellent soldier.

HELMMA.

**A Changed View of a Changed Man.**

I am completely discouraged after trying so called specialists and different advertised remedies for that I am getting worse instead of better and have about given up hope of ever being cured of my kidney trouble.

I have changed my mind, for after reading of the positive guarantee of Foley's Kidney Cure, as a forlorn hope I tried a bottle, and the result was so favorable that I continued its use until I had taken three bottles which effected a thorough cure, and I am a changed man.

**The Standard Dictionary**  
New York Observer: "It is indeed a prodigious work." The knowledge and experience of the most able minds of the age in all the departments of art and science, of literature and of learning, have practically been focused in the result, a dictionary so thorough in details, so comprehensive in its reach, so accessible and intelligible to the student of every average attainment, and yet so admirably to the profoundest scholar that it must be considered a place before undreamed of and not yet unfolded."

See display advertisement of how to obtain the Standard Dictionary by making a small payment down, the remainder in installments.

—A man who prays for something he isn't willing to work for. If you must let always be on the top and the bottom faces.

—If you find four to trend where four rain in they should use their wings.

**Importation of Mothers.**  
The manufacturers of Castles have been ordered to send hundreds of thousands of dollars to the United States to import the mothers of the California State. This order has been issued by the State of California, and it is a very serious matter. All persons should be careful to read the advertisement of the State of California, and to see that the mothers of the State are not imported without the consent of the State of California.

**Don't Toss Spit and Smoke Your Life Away**  
Tossing spit and smoke away, by neglecting the most important part of the human body, the lungs, is a waste of time and money. It is a waste of time and money to neglect the lungs, and to let them get out of order. It is a waste of time and money to neglect the lungs, and to let them get out of order.

**RUSSIAN WOLFHOUND.**  
THE BORZOI HAS ACHIEVED GREAT POPULARITY.

So that the Huntsman May Safely Approach and Muzzle the Fierce and Bloodthirsty Inmate—Not a Success as a Coyote Chaser.

(Special Letter)  
The Borzoi, or Russian wolfhound, was first brought over to England and America about thirty-five years ago, but only within the last twelve or fourteen years has it become so popular. Although known as one of the fiercest and most capable of dogs, the Russian wolfhound at home, where from the earliest times it has been bred for wolf-hunting, and not as a family pet, is both fierce and quarrelsome. Mr. P. Lane, describing Mr. Kilmonty's pack of twenty-two couple, kept exclusively for hunting, refers to a large staff of kennel-men, and to the fact that the dogs are so fond of fighting among themselves that men must always be on duty to interfere and stop breaches of the peace. This is a curious fact, and the dogs are so fond of fighting among themselves that men must always be on duty to interfere and stop breaches of the peace.

These are some of the reasons why the dog is so popular. It is a dog that is both fierce and quarrelsome, and it is a dog that is both fierce and quarrelsome.

It is a dog that is both fierce and quarrelsome, and it is a dog that is both fierce and quarrelsome. It is a dog that is both fierce and quarrelsome, and it is a dog that is both fierce and quarrelsome.

It is a dog that is both fierce and quarrelsome, and it is a dog that is both fierce and quarrelsome. It is a dog that is both fierce and quarrelsome, and it is a dog that is both fierce and quarrelsome.

It is a dog that is both fierce and quarrelsome, and it is a dog that is both fierce and quarrelsome. It is a dog that is both fierce and quarrelsome, and it is a dog that is both fierce and quarrelsome.

It is a dog that is both fierce and quarrelsome, and it is a dog that is both fierce and quarrelsome. It is a dog that is both fierce and quarrelsome, and it is a dog that is both fierce and quarrelsome.

It is a dog that is both fierce and quarrelsome, and it is a dog that is both fierce and quarrelsome. It is a dog that is both fierce and quarrelsome, and it is a dog that is both fierce and quarrelsome.

**FALSE PATRIOTISM.**  
The Pitt Commonwealth Do Many Others When Hoaxing Look On.

"Ma an' I want to see the soldiers go marching off," said Johnnie, according to the Lawrence American. "I tell you 'twas great fun to see 'em. I asked him how he liked it, and he said it made her feel real patriotic." The said she wished she was a man and there would nobody catch her staying to home such a time as this, she said she would be off fighting for her country every time. Ya said she'd like to be on account of her being a woman, 'cause she could go as a nurse, just to be of others were told. An' she said that wasn't what she wanted. She'd like to get right into the thick of the battle, where bullets were whizzin' round an' cannon 'gain' off an' soldiers falling all around. An' she laughed an' laughed. He said he'd just like to see me in a place like that. An' he said out in the center of the back room where Li-ang's gun was standin' the dust was three inches thick, 'cause she was so full of that and she didn't dare to get near it so that it to sweep the floor up. An' she said she would average seven or eight a minute if she got in sight of a real battle, to say nothing of what would happen if she was right in it. And then he laughed an' laughed, an' she was mad, an' she said there was time when she used to be a regular fool.

How the Drum at '95.  
Paint President W. Van, aprill: Uncle Sam, Greer, who has lived through four wars, viz. the war of 1812, the Mexican war, the Civil war, and the Spanish-American war, was one of the central figures in the busy day parade. He is 85 years old, and played a drum in one of the bands of the procession.

Berlin's Thoughts.  
Maid Mea, the baby has gone off and nobody has seen him for an hour, and nobody has left the gate wide open for the night. The gate was open? Then Fico has probably run away, and just like as not I shall never see the dear thing again.

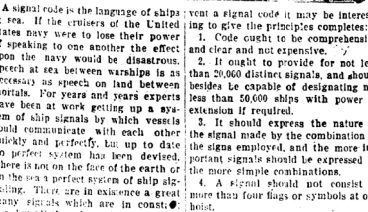

Literary Opinions.  
After the war is over Pe Lame, Pablo and Caracana can make money by being a book editor: "The Diplomat," "The Literary," "Every One," "The Literary," by those who know in Philadelphia Press.

DEVIOT DEFINITIONS.  
Black-writer—A sort of literary huckster.  
Forgettery—Better than memory at times.  
Kiss—A wireless telegraph message to the heart.  
Chatterbox—The one occupied by a theater party.  
Kaleidoscope—Another name for a woman's face if the reflection and the reflection are not the same.  
Agreeable—A person who always agrees with you.  
Hog—An animal that gets right down to the root of things.  
Blunder—In others synonymous with our own mistakes.  
Success—The one road on the map that leads to popularity.

Classical—The kind of music one is supposed to like because it comes high.  
Society—A Punch and Judy show in which the figures are dollars instead of cents.  
Mystery—Something that people rely upon when it confirms their own opinions—Chicago News.

The total number of United States vessels entering Cuba is seventy-seven.

Somehow unusual export is reported this week in the shipment of 10 tons of American steel to Calcutta. The metal is from the mines and works of the Bertha Zinc Company in Virginia, and the order came from the Indian office's department. The reason was for zinc of exceptional purity.

Somehow unusual export is reported this week in the shipment of 10 tons of American steel to Calcutta. The metal is from the mines and works of the Bertha Zinc Company in Virginia, and the order came from the Indian office's department. The reason was for zinc of exceptional purity.

When Capt. Sigbee's Maine was blown up the captain's first thought was for his private signal code. This is in the captain's cabin of every cruiser and is kept under lock and key. This secret signal code is printed in a book, the covers of which are weighted with lead. In an engagement at sea if the vessel is about to be captured the captain's code, gets it out and drops it overboard. It falls like lead to the bottom of the sea and the enemy does not get it.

Some men are very fond of their signal code. They are very fond of their signal code. They are very fond of their signal code.

Some men are very fond of their signal code. They are very fond of their signal code. They are very fond of their signal code.

## Hair Tints

Is your hair dry, harsh, and brittle? Is it fading or turning gray? Is it falling out? Does dandruff trouble you? For any or all of these conditions there is an infallible remedy in Dr. Ayer's Hair Vigor.

For years, I was troubled with dandruff, large flakes scaling and falling off, causing great annoyance. Sometimes the itching of the scalp was almost unbearable. Prescriptions from eminent physicians, put up my own drug store, were tried, but failed to afford relief. At length I used Dr. Ayer's Hair Vigor, and in one week I found it helped me. At the end of only two weeks, my head was free from dandruff, and as clean as a child's. I heartily recommend Dr. Ayer's Hair Vigor to all who are suffering from diseases of the scalp.—E. W. NORTON, Druggist, etc., Lowell, Mass.

### Use Ayer's Hair Vigor
