The cow question still burns fiercely, and will do so as long as there is a demand for milk. Considered merely in its moral aspect the question presents no difficulty. It is certainly the duty of every man who owns a cow to see that she does not damage his neighbor's property or otherwise seriously annoy him. But how to make men moral? Can it be done by law? This opens so wide a field of inquiry that if we wait for its conclusion, the crops will be destroyed. One man, at least, in Gladstone not only sends his cow out to forage on the neighbors, but he also puts a bell upon her so

JAPS ATTACK REPULSED

Oyama Makes an Unsuccessful Attempt to Capture Lone Tree

Hill.

St. Petersburg, Oct. 19.-1:45 p. m.-The Emperor has received from Gen. Kuropatkin, under date of October 18, the following dispatch:

Tree hill, but they were repulsed. No reports have been received of any other engagements. Everything was quiet at all our positions up to 10 o'clock this morning. Rain fell all night and the engagements. Everything was quiet at morning. Rain fell all night and the roads have been greatly damaged."

Armies in Deadlock.

The flush of enthusiasm yesterday evening over the capture of Lone Tree tacks of the Japanese left and the hard drubbing gren Gen. Yamada, with the capture of fourteen additional guns, has given way this morning to a calmer and more sober appraisement of these partial successes. There is no official confirmation of the report that Gen. Kuropatkin had resumed a genuine offensive, but rather that the general Japanese offen-sive has exhausted itself and that the position of the armies is now a sort o deadlock, with the country rendered s sodden by the heavy rain as to compea temporary suspension of general opera tions.

Veil Hides War Drama.

A complete veil hides the movements but both Kuropatkin's and Sakha roff's reports any there were no collisions on that portion of the battleground Mon-day or Tuesday. Field Marshal Oyama evidently considers that Lone Tree hill, from which Kuropatkin could pivet a turning movement against his left, to be of vital importance as both Sunday and Monday night the latter during a convisio Monday nights the latter during a terrific storm made desperate efforts to recal ture it, accompanying the assaults with trative attacks against other But all the efforts failed. demonstrative

points. But all the efforts failed. Neither Kuropatkin nor Sakharoff in the dispatches given out this morning send details of the defeat of Yamada's column and the capture of the Japa nese guns.

Pitiful pictures are painted by the way correspondents of the sheltcrless troop-bivouacking in the cold rain, the roads converted into quagmires and the stream.

Oyama to Push On.

The military critics are not yet satisfied that Oyama is ready to relinquish the of fensive, expressing the opinion that he may still try to break through the Rus-sian center in order to compel Kuropat-kin to retire from the line of the Hun river, unless, as they believe, he has become convinced that the superiority of the Russian numbers and reserves makes his withdrawal to the line of the Taitse river advisable

CAN'T ASSUME OFFENSIVE.

Japanese Do Not Think Kuropatkin Can Assume the Aggressive.

Tokio, Oct. 19 .- No reports from the Japanese Manchurian headquarters were received last night or today, and as a consequence it is assumed here that in-activity has followed the abortive Rus-sian assaults of Monday night. The Russian concentration in front of the armies of Gens. Oku and Nodzu (the left and center, respectively,) on Monday, re-ported by Field Marshal Oyama, created the impression here that the Russians were planning to assume the aggressive, and that another great battle was imminent, but it is now thought that Gen. Kuropatkin is merely seeking to protect Gen. Soboleff's Sixth his right and rear in order to gain tim to withdraw his army across the Hun river, because it is believed that it will be impossible for him either to move aggressively against the Japanese or to hold his position on the Shakhe river. Figures showing the Japanese losses since October 10 are still incomplete as is the count of the guns and other Russian property captured by the Japanese. Figures showing the losses to the Russians are likewise incomplete.

LITTLE TOE IS DISAPPEARING.

Principle of Disuse in Man Is Amply Illustrated.

Dr. George F. Shrady of New York in commenting on the theory of Sir John Murray that the little toe of man is disappearing, said: "It is true that while civilization develops man in some ways it also degenerates him in others. For instance presented forder others. For instance, prepared foods weaken the stomach; whereas when men had to eat coarse foods they had not only sound digestive organs, but magnifionly sound digestive organs, but magnin-cent teeth. These facts have led philoso-phers today to prophesy that the time will come when man can live without a stomach by eating prepared foods. "The principle of disuse is well ex-emplified in the foot. The toes are spread out to express the foot and

out to support the arch of the foot and balance the body. In savages who do not wear shoes, or, at the most, soft moccasins, the toes are spread out like a fan, as if to grasp the earth. St. Petersburg, Oct. 18.-2:08 p. m.-The issue of the bloody drama below Mukden is still in the balance. There is no attempt to minimize the severe charthe reverse suffered by Gen. Kuropatkin iast week, but as yet there has been nothing absolutely decisive. There certainly is no rout and no Sedan, and the war office has not yet given up all hope that Kuropatkin may be able to again resume a genuine offensive. It is asserted here that the tone which the diplomats and newspapers of Tokio as-sumed in referring to what they seem to look upon as the closing act of the tragedy of Gen. Kuropatkin's army, is containly prometure. Both armias are certainly premature. Both armies are greatly exhausted and the final issue probably will depend on which can re-gather itself the quicker. The Russian legions are terribly battered and more or less demoralized, but the splendid manner in which they went forward against Lone Tree hill Sunday is sufficient evience that the temper and courage of the troops are not completely shaken.

An official of the foreign office with whom the correspondent of the Asso-ciated Press talked, does not believe that the United States seriously contemplated tendering her good offices at this time. He could not believe there could exist at Washington the opinion that such over-tures would be entertainable unless Japan had directly indicated a wish to end the struggle. That Japan would be glad to make peace under the present circum-stances he did not doubt, but Russia was by no means ready.

PROTECTION FACTS.

Tariffs Have Brought About Faires Distribution of Wealth.

It is customary for our friends of the opposition whenever a campaign is on to bewail the unequal distribution of wealth in this country, to point tearfully to the favored classes and the downtrodden masses and to denounce the protective tariff as an agency for "rob bing the many to enrich the few."

Of course there are rich people and poor people, and the latter are in the majority. Thrift is less common than wastefulness. The genius for accumulation, for business enterprise, for economy, for perceiving and grasping opportunities, for adapting means to ends, is less prevalent than are opposite characteristics. Likewise such talents as make statesmen, orators, musicians, poets, mathematicians, inventors, astronomers, etc., are possessed by the minority of human beings. The ability to get rich is undoubtedly quite as much a matter of inborn temperament as is the faculty of achievement in any other line of special endeavor.

But, going back to the unequal distribution of worldly possessions, is it true that the protective tariff is the cause of all the trouble? If so, we should look to some country which has no protective tariff for an exemplification of the opposite condition. And as Great Britain is the only nation of any importance that clings to free trade it is there, if anywhere, that there must be found immunity from the alleged "special privileges to favored interests" conferred by protection. Is it true, then, in England, as compared with America, that the rich are less rich, that the poor are less poor, that the of commerce and labor. gulf between the two classes is less ists.

OUR FOREIGN TRADE.

Its Great Advance Under the Stime lus of Protection.

Under the Wilson-Gorman law our exports averaged about \$840,000,000 annually. In 1892 under the McKinley law they had risen to \$1,030,278,148. Since 1897 they have averaged over \$1,250,000,000. With present trade conditions unchanged they promise to average for the next five years something like \$1,400,000,000, says the New

York Tribune. The year just ended marks the climax in the steady growth of foreign trade begun under the stimulus of a restored Republican tariff. list will be suspended and the what possible excuse can there be for rule of payment in advance urging an interference with this beneffor subscriptions will be icent process, for advocating a derangement of the conditions under which we expiration of the time for have achieved an extraordinary national prosperity?

It is the custom of free trade critics to explain away the expansion of our export trade by saying that it comes in the main from an unavoidable European demand for raw materials and food-

stuffs. But this answer ignores the fact that our exports of manufactures are increasing year by year. More American manufactured goods were sent abroad last year than in any other year in our history. Complete figures in the two classes of exports are not yet available. But the department of commerce and labor estimates that this year's gain in manufactured exports over last year's notable record will be at least \$20,000,000, a greater gain relatively than that made in nonmanufactured exports.

Our trade with foreign countries in 1903-04 leaves us with a balance in our favor of \$470,000,000. This is \$76,000,-000 greater than our balance for 1902-03 and is four times the average balance shown under the Democratic tariff legislation of 1894. Whichever way one turns those figures they utterly discredit the contention that conditions in trade and industry have so changed as to demand an overhauling of our tariff system. Judged by its results, that system needs no overhauling. Least of all does it need revision at the hands of a party incapable of unity or logic,

whose only serious experiment at tariff legislation in nearly half a century ended ten years ago in a confessed and melancholy failure.

TARIFF REVISION.

Judged by Results, Gur Economic System Needs No Overhauling.

Democratic orators and pamphleteers who clamor for a change of national administration and for a more or less complete revision or our fiscal and revenue policies can find no comfort in the summary of our foreign trade for 1903-04, just issued by the department

IT NEEDS THE MONEY.

Democratic Party Not Particular Where It Comes From.

The Democratic platform denounces the Dingley tariff as the sum of all tariff villainies. It cannot get together words strong enough to express the feeling of opposition the party has toward that measure, but when it has done the best it can under the limited resources of the English language it furnishes its own interpretation by putting the ardent protectionist, Henry G. Davis, on the ticket for vice president.

The strong protectionism of Mr. Davis may commend him to Republican voters, but he is not the choice on that account of the men in command of his party. The party needs the money, and it is not in the least particular about where it gets it. It is willing to take up any man with opinions or without them so that it is able by hook and by crook to make a showing in the election. Thus it can violently denounce the protective policy and yet name a protectionist for highest honors. Besides, Mr. Davis is a protectionist of the most selfish kind, since he is the special champion of the kind of tariff legislation that puts a high duty on coal. In other words, he is a Democrat in theory and a protectionist in practice.-Buffalo News.

Of course I'm lucky, and I d nee To please them every one; But sometimes it does seem as if 'Twould be a lot of fun, 'Bout once a year, to be a boy Whose fam'ly went away And didn't come back home again 'Till almost night, next day. Elizabeth Lincoln Gould in Good House

The Woman of Thirty.

When one knows the age of a woman one knows the woman. The very fact that she permits you to know her age exposits her character. She no longer masquerades. She has lost a certain un-certainty, an evanescent delicacy, that was irresistible charm. Women, like philosophy, are divided into two classes, the knowable and the unknowable. Also like philosophy, it is the unknowable woman who is the speculable. Therefore to get her at her highest capacity, she st be unmarried and about 30.

The married woman presents certain inescapable tell-tale data. She has children, and those children have apparent ages, two facts which go far in deter-mining her annals. If she is unmarried and is not "about 30," she is under 30, again a definite fact. Being "about 30" again a dennite fact. Being about 30 is indefinite. She may be more or less. No one hazards a guess. There is a de-tightful vagueness in being "about 30." It has nothing to do with dates; and many of us who from our youth up have felt no attachment for dates can forgive the unattached their confessed indiffernce .- The Reader.

A Woman's Happiness.

An engaged girl, who went away for her were filled with loneliness and despair. Thus the first part of the summer was joyous and gladsome. Whenever would get a letter that was particularly miserable she would put on her shortest dress, with open-work stockings, and, with boisterous spirits, would go out onto the piaza and firt outrageously with the attenuated old professor, who, having lost his memory, still continued to visit the resort. She would also go to bed on these nights singing a song, and with a happy smile on her lips, after hav-ing re-read her lover's letter. It hap-pened, however, that, as the summer wore on, her lover's letters grew somewhat less despondent and gave occasion-al accounts of little pleasures that had come his way, whereupon the girl got a grouch, and, failing to see the old prowent for long walks alone, and noticed every time her mother's hat was on crooked, and began to find fault with her lover, and tell him that his melanholy letters had spoiled her summer.

The Summer's End.

Our grandmothers were firmly of the opinion that the only proper way to pack white things for the winter was "rough dried. Under this system they can be dumped into anything and stored away

pear fresh and in her right mind when evening comes and brothers, father or husband return from their daily labors. There are many little ways in which a woman may rest at other times. When waiting for a car at a station, it is wise to sit down squarely on the seat and calmly wait; not on the edge of the seat, fidgeting until the car arrives. That is the way, and the only way, to overcome this nervous, fidgeting affliction

that has taken possession of our women of late.-Health Culture.

The Earliest Influences.

It is supposed that every mother wishes her child to be perfect. She may have it so if she will observe the natural laws of life. Inheritance and environment are the keys to the situation. First, let her realize that the child in-

herits personal appearance, disposition, characteristics and disease from its an-cestors, either remote or near, and she will try to bring her own personality to its highest standard. Dr. Oliver Wendell Holmes was right when he said we must begin to train a child two hundred years before it is born, but much may complished by its own parents, if they do their duty.

The expectant mother is exceedingly susceptible to all influences, and through her impressions, a child may be affected. At no other time is she so easily im-pressed; good or bad, beautiful or home-ly objects leave their indelible impress her and her unborn child. The an cient Greeks knew this, and those beauty loving people took pains to surround the woman with objects of grace and loveli-ness. Believing also in the laws of heredity, they made a law which each year compelled the most beautiful young man and maiden to marry, and thus perpetuate their beauty.

Intellect is transmissible from parents to children, but it is not a proved fact that real genius is. It requires a special effort of nature to make a real genius, and as if exhausted from the effort rests for several generations. Shakespeare, Milton, Socrates, Buffon, Aristotle and Milton, and the summer, bore the separation from her Plato did not transmit their magnificent lover very well as long as his letters to genius to their offspring but in one way we may explain this by saying that none of them had brilliant wives. Sons inherit their intellects from their mothers, and the wives of the men mentioned may have lessened the qualities transmitted by them.

Those women who have been celebrated for their mentality have reflected the genius of their fathers. Hypatia, Madame de Stael, Arcte and George Sand were all the daughters of philoso-phers. Walter Scott, Burns, Ben Johnphers. son, Goethe and Byron were the sons of women famous for the brilliance of their intellect and language. Within our own circle of acquaintances we may not similar inheritances. We know that none of the great statesmen or literary men of our own times have brilliant sons, but many of them have daughters far above the average mentally. This explains sex-intellectuality.—Maude Murray Millan in The Pilgrim.

this never-endingness women early learn the rhyme: man works till set of sun

But woman's work is never done. Admitting that the last line of this im-

mortal couplet is true, how about the first line? far as I have observed, a man's work does not stay done any more than a woman's. The bookkeeper adds his columns today, but other columns con-front him tomorrow. The editor lays his pen and scissors down tonight only to take them up again tomorrow; the real

estate man and the book agent have use for their eloquence day in and day out. Hod-carrying and selling dry goods, teach-ing and making shoes seem to flourish the

week round. As for man's work being till set of sun only, how many of them study, write, post books over hours, then begin again next morning and do the same thing over again? In truth, I do not know of any work in the world that is done once for all-not even the under-

taker's. Was it Josh Billings who said that it is just as well not to know things as t know things that "ain't so?"

Every day we hear someone say, "He who hesitates is lost," when the truth is that nine times out of ten it is he or she who hesitates that is saved. "Econony is the road to wealth" only when it means a just estimate of relative values A man may delve and save through a lifetime and die poor. It is he who sends his money broadcast at the right moment who wins. "Whatever is worth doing at all is

worth doing well" is another one of the sayings that will bear investigation. Household tasks may now and then be slighted. Exacting as these demands are they may sometimes be set aside. It is the wise housekeeper who knows when this can be done. Better a little dust on the furniture, or a little comfortable disorder in the sitting room than go to bed with throbbing nerves or sacrifice the cozy chat with the children. BEAST AND WIRE.

New Diversions of the Animal Kingdom in East Africa.

The animal kingdom in British East Africa looks upon the 2190 miles of telegraph wire strung through that region as an innovation to be utilized. The wires arouse curiosity and stimulate experimentation. A number of genera and no end of species are trying to find the adaptation of the telegraph to their special purposes; and so the routine of the tele-graph business is more or less crowded with incidents of an unusual character, some of which are mentioned in the latest official report. This speaks of monkeys as incorrigible. Many of them have been shot and thousands frightened, but they cannot get over the idea that the wires are merely a new facility for their ath-letic performances in mid-air. They have ceased to pay much attention to the locomotive, and even the shricks of the whis-Three wires are strung on the same line of poles for 584 miles between the Indian ocean and Victoria Nyanza, giving an opportunity for more complicated per-formances. The Kikuyu forest is men-tioned as a place where monkeys, in their

evolutions, sometimes succeed in twisting the wires together.

The gentle giraffe is also a source of annoyance. He sometimes applies enough muscular energy to the bracket on which the wire is fastened to twist it around with other wires. The hippopotamus is also a nuisance, because he rubs up against the poles and sometimes knocks

The temptation was great and not always resisted, for wire would buy stamping out wire stealing and it now seems to be a thing of the past.

Fifty-nine offices are receiving and sending telegrams in British East Africa and Uganda. Wires connect the sea-coast with Albert Nyanza, where Emin Pasha was so long cut off from the world by the Mahdists. Relaxation for Women.

In this busy world of ours-or rather in these busy cities—rest is absolutely necessary to the society woman, the housewife or the woman of business, for all women are high strung and need to put on the brake once in a while or trouble invariably results.

Any stranger visiting our shores is impressed with the extreme nervousness of our people, which is shown in the many statitudes they assume within a short space of time and the difficulty with which they keep their hands still for more than a few minutes at a time.

Indeed, it is not uncommon to hear women complain of being so tired out and so nervous that they simply must find something to do, being unable to sit

still for any length of time. Such a state of affairs is deplorable, and bodes ill, not alone for the women concerned, but for the future generations as well.

Rest is absolutely necessary to each human being; how else can we expect to be well poised, clear headed and self possessed? Extreme nervousness is akin to dementia, and the women of today must call a halt and put a stop to the pace that kills ere it is too late. It is advisable that every woman

should rest each day for a short period. It is not necessary to sleep, but it is well to retire to one's own room, remove all tight clothing, don a lounging robe and lie down. Relax all the muscles; let go, as it were, feel all the tension under which you have been holding yourself slacken little by little, and shut out all care from your mind.

There are those who claim this cannot be done, they have so much on their minds, their burdens are so heavy, and Dear Woman, your burden is not so great but someone else has borne as heavy a burden before; you are not alone in your trouble, and you can forget it if you will, for it is your duty to be superior to all outside influences.

I have seen the last of my husband for the whole day. He waves his hand at the end of the lane, and is gone. He likes this big new country, with its great spaces, and he lives in the future when we are all going to be rich. But I don't care for a big. empty, level landscape. I pine for the hills and the sea. I long for the dear people in the little home village, for the gossip and the familiar faces, and the church fairs, and the little things that happen. Nothing happens here. But, thank God, the children are rosy and healthy and grow like young colts. Trees of Many Fruits.

Many people who live on city lots long for fruit trees of their own from which they can gather fresh fruit instead of being dependent on the markets, but, owing to cramped garden area, they feel that an orchard is an impossibility. Mr. Vaughn of Pasadena was confronted by just such a problem, but he has cleverly found a way out of the difficulty. On the back of his town lot he had room for six fruit trees. He planted navel oranges and peaches and plums, and when they had become strong and sturdy he grafted and budded other varieties into them. The operations were all successful and now Mr. Vaughn has numerous varieties of fruit that ripen at all times of year and furnish an abundance for table use. On one naval orange tree Mr. Vaughn budded a tangerine, a grape fruit, a lemon and a blood orange, making with the navel orange itself five kinds of fruit on one tree. They all bear profusely, on one tree. They all bear profusely, and the fruit is of extraordinarily large size. The peach trees were budded with numerous varieties of early and late peaches, as well as apricots and nec-tarines. These trees bear from the first of July to the first of November. The plum trees have been induced to produce many kinds of plums. If all the fruit raised from these six trees came from in-

dividual trees of their own kind, it would take something like a five-acre ranch to accommodate the orchard .-- Country Life in America.

When Salt Was Money.

When Salt Was Money. Many, many years ago salt was so hard to obtain, but so necessary to have, that Roman soldiers were paid part of their wages in salt. Now the Latin word for salt is sal, and from that came the word salarium, meaning salt-money. Finally the soldiers were paid only in money, but the term salarium was still used to designate these wages. From this old Latin word comes our English word salary. Do you see, then, why we say of a worthless fellow that he "is not worth his salt?" worth his salt?"

A Distinguished Bedroom.

A Philanthropic Joke.

First a halfpenny and then a gold piece gave considerable amusement to a small crowd in the Rue Dounou, Paris.

The former coin was placed on the pavement and lay untouched for an hour and a half before it was picked up by an old lady, who carefully placed it in her reticule, despite the derisive cheers which were accorded her by those who were watching.

An American gentleman then placed a 20-franc piece on the ground, and as pedestrian after pedestrian passed without seeing it, they were startled by the uproarious laughter from doors and windows. They stopped short, looked con-fused and then hurried away with indignant glances at the merrymakers.

The louis was at last picked up by a bent and feeble old man, who hobbled off with his treasure amid enthusinstic cheers .-- London Daily Mail.

A dispatch from Gen. A detachment of 2000 Cossacks Tuesday night reconnoitered the Japanest left southwestward along a line ex-tending westward from the railroad, where it crosses the Schili river, through the villages of Haitsantai, Tadousampu and Sandepu, the latter fifteen miles west of the railroad. London, Oct. 20.-The complete repulse of the Russian attack and a gain of about fifteen miles of ground seem to be the net result of the battle of the Shakhe to the Japanese, who again failed, as at Liao Yang, to follow up their victory with a crushing blow.

Opinions, however, differ as to whether the present situation indicates a lull or end of the battle, none of the dis

That march from the Kentucky River through the rain and mud would have been hard on the most seasoned troops, but it was particularly hard on us. My mouth waters now as I think of our muddy and hungry company huddled in the courthouse at Lexington.

> "Our Captain, who was afterward Colonel of the regiment, went out foraging and came in with three big boxes of gingerbread. Nothing ever tasted so good to me as that gingerbread, and I never forgot the Captain. In the march to Louisville our company (B) was rear guard, and the men were so exhausted they went to sleep standing. On one occasion I went to sleep and was overlooked when the regiment moved on, and would have been captured had not John McCook (Colonel Dan's brother), snooping along in the rear, waked me up. I never forgot

John for that. "When we left Lexington our haversacks were like old Mother Hubbard's cupboard, and, despite the gingerbread, we were soon hungry. We were not allowed to forage, and after an all day's and an all night's march we were pastured in a meadow alongside of a cornfield, the ears at the roasting stage of development. We were ordered to build fires and cook the corn, but some of the boys were so blamed hungry they could not wait for the corn to cook, but ate it raw, and others ate it half cooked and thought it was good. That was our hardest experience in the army. We got the hot end of the poker first.

"Later in the war, when we were in General Jimmy Morgan's brigade, and were cruising down near Gainesville, Ala., for Hood, there was a good deal of foraging in spite of the General's prejudices against it. There were a good many sheep in the neighborhood. and some of them fell by the way. A storm of applause greeted the renowned bandmaster when he appeared on the stage, which seemed to mystify our old friend. "That's a finelookin' feller, but he ain't played nuthin' yet," said he. "What's all this hullabaloo about, anyway? Is he goin' to play a tune on that huskin' peg?" Just at this moment Brooke's baton was raised, there was an instant of eager expectancy, and then the band struck up a stirring march. When the music ceased the old gentleman was in ecstacies. He applauded and stamped his feet vigorously, then jumped up out of his chair, waving his hands in the air and whistling like a gallery god. When his wife pulled him back into his seat he shouted: "By cricky, Manda, I never heard such music as that before. Seth Tibbitts and his old fiddle don't amount to shucks?"

And so it continued throughout the concert. Uncle Reuben growing more enthusiastic with each number.

During this selection six red-shirted blacksmiths occupied the front of the stage, and played the anvil accompaniment to the music, while a sensational effect was produced by the firing of sixteen electric cannon at regular intervals."

When the first gun was fired, the rustic dodged excitedly, and began to get nervous. The next discharged added to his discomfort, and when the third cannon went off he grabbed his hat and started hastily for the door, followed by his faithful spouse.

BLOOD WILL TELI

A THEORY SUPPORTED BY FRESH, CONCLUSIVE EVIDENCE

A Recent Instance Proves That a Woman's Happiness is Largely Dependent on the State of Her Blood.

When the blood is disordered every organ of the body is affected unfavorably and fails to discharge its functions. properly. In the case of every woman nature has made special provision for a periodical purification of the blood and so long as this occurs her health and spirits unfailingly reveal the beneficial results. So slight a cause as a cold or a nervous shock may produce a suppression of this vital function and until it is restored she is doomed to misery. The remedy that has proved most prompt and effective in all disorders peculiar to the female sex, is that which brought such great relief to Miss Mattie Griggs, of No. 807 Indiana street, Lawrence, Kansas, concerning which she speaks as follows:

"In the winter of 1902, from some unknown cause, there was a cessation of functions peculiar to my sex for a peout help. I had nausea and pain and a care of a physician for three months, Topeka State Journal. but he did not succeed in curing me. Then a lady friend told me about the merits of Dr. Williams' Pink Pills which she had used in her family and she induced me to try them. It was in May when I first began to use them and in June I had fully recovered my health, and have since remained perfectly well."

In all cases of delayed development of young girls; in anæmia or weakness due to impoverished blood and showing itself in pallor, lack of ambition, despondency and nervousness; also in the great constitutional disturbances attending the period known as the change of life, Dr. Williams' Pink Pills are invaluable for women, whose health is always closely dependent on the state of the blood. blood. They are sold by all drug-gists. A booklet of valuable information, relating to the care of a woman's health at all important periods, and entitled "Plain Talks to Women," will be sent free in a sealed envelope to any one who chooses to write for it to the Dr. Williams Medicine Company, Schenectady, N. Y.

Bridging the Zambesi.

All the materials for the great bridge which is to be thrown across the Zam-besi immediately below Victoria Falls have now been transported from Darlington to the scene of operations. But many difficulties have still to be faced and overcome. The nearest drift is six miles distant, and all communication between the banks of the river is depend-ent upon a wire rope and a "bo'sun's" chair. It was hoped that foundations on solid rock on either side would have been found six months ago, but the de-sired result has only just been attained.

By that time the men employed on the bridge will have been working for more than twelve months at their task. During eight of these months they will be exposed to the spray of the falls—a

Why More Showers in the Afternoon.

"Did you ever stop to think about the fact that we have more showers in the afternoon than we have in the morning, and the causes which bring about this result?" asked a man who takes an interest

in meteorological questions. "The chief factor is the upward movement of the air which is brought about by heat. You see in clear weather the heat is not at its height until after midday. The changes which set in as a re-sult of the air movement in the afternoon It is expected, however, that the bridge will be completed by May, 1905. force as the orb rolls down toward the western horizon will bring about just those conditions favorable to the production of showers, and the next result is converting the ground on either bank into a veritable Slough of Despond. The at five months and every white months are advantage of these showers to plant the district of these showers to plant the district of these showers to plant the distribution of the distribution true plants need resuscitation after the severe heat of the day. They are in a wilted condition and need the sprinkling we give the plants in the flower garden. Nature does the sprinkling by conding a good does the sprinkling by sending a good, refreshing shower. The afternoon show-er is a great institution, too, from the standpoint of human beings, and other animals, for animals, you know, frequently begin to droop under the depress-ing influence of severe heat. In the days when science was more poetical and less scientific than it is now here lived a certain alchemist." He was an old man. His feet shuffled and his knees doddered as he walked. WISE HENS OF OREGON.

Their Owner Says They Can Tell Drones from Working Bees.

"Worth their weight in coined silver,' is the value attached to his flock of hens and chickens by W. H. Penning, the most extensive producer of honey in the alfalfa region about Ontario, Ore. This high price for poultry is not on account of the beauty or size or pedigree of his flock, but on account of their having developed a faculty or intelligence which enables them to distinguish between a working bee and a drone, which enables him to secure a much larger yield of honey from his 500 hives, as his hens keep the num-ber of lazy, idle drones, who are not armed with stings, but who have good appetities, reduced to a minimum, and more cells are filled and sealed daily by the hur weaper.

more cells are filed and scaled daily by the busy workers. Mr. Penning told the Oregonian the story of the wonderful development of his hens, which are allowed to run at large among his beehives, and who, like many other "birds," have a fondness for heas bugg grasshopmens and other in many other "birds," have a fondness for bees, bugs, grasshoppers and other in "sects, but which, generally speaking, have learned to leave bees entirely alone, having in their early attempts at swal-lowing them found that pain and danger lurked in the stings with which most of them are armed. Within the past year or two he has noticed his hens peeking into the entrances of hives and occainto the entrances of hives and occa-sionally seizing a bee, which, after plac-ing on the ground and examining critical-ly, they would sometimes swallow and sometimes allow to ily away.

This resulted in a careful investigation by him of the strange action of the hens, and he soon found that the fowls had learned to distinguish the stingless and useless drones from the armed working bees, and that in consequence the numbees, and that in consequence the num-ber of the eaters, but non-producers of honey, was being kept within reasonable limits. He has also discovered that this season the old hens have taught their chickens how to distinguish between the two classes of bees. He believes that no other fourly here erea acquired this relaother fowls have ever acquired this valu able knowledge and has not found any one who has ever heard of such knowl-edge being displayed by any fowl or bird. He is greatly delighted at his discovery, for it means many dollars in his pocket, and his discovery is now pub-lished for the information of all apiarists, students of entomology and the public general.—Portland Oregonian.

Preacher Talked Very Loud.

"During a southern tour," said John D. Rockefeller, Jr., "I attended church one Sunday morning in a quaint little wooden meeting house, where the pews were un-painted pine boards.

"The minister was a good man, a sin-cere man, a really eloquent man, but he had contracted somewhere an unfor-tunate habit of bellowing. He bellowed like a bull. His voice shook the rafters. The sound overwhelmed the sense, and it was often impossible, for very noise,

it was often impossible, for very horse, to get at the man's meaning. "He was especially loud during the prayer. I never heard such an uproar as filled the little building while the south-ern minister prayed. After he was through a little girl on my left gave a sigh of relief and I heard her whisper to her father:

her father: "'Father, don't you think that if he lived nearer to God he wouldn't have to talk so loud?' "-Philadelphia Ledger.

A Notwegian has invented a queer way of finding out where the fish are. A microphone, which is an instrument that will catch and transmit the least little bit win catch and transmit the feast fittle bit of sound, is lowered into the water from a fishing smack, and a wire from it leads to a telephone aboard the boat. Now, as the herring, codfish and mackerel schools number thousands and tens of thousands of fish, their passage through the water naturally causes a rushing sound, which can be heard by the fishermen at the telephone, and thus they are enabled to lower their nets at the right time and in the right place.—Boston
