GENERAL OPERATIONS:

The Andaste sailed from the port of Lorain, Ohio, on her first trip April 24, 1900, and arrived at Cleveland on her last trip, ready to lay up, December 4, 1900, having been in commission 225 days.

This steamer made a total of 21 trips for the season, bringing down 14 cargoes of iron ore from Upper Lake ports; 8 cargoes of grain were carried from Lake Michigan, and cargoes of coal were carried on up trips as follows:

2 cargoes to Marquette,

3 cargoes to Milwaukee,

2 cargoes to Chicago.

The total number of miles traveled by this steamer for the season was 30,581. She carried 75,314 gross tons of freight, from which the net earnings were \$22,795.35.

The average rate of freight obtained on all commodities of freight carried was \$.8065 per gross ton. The cost of carrying was \$.5038 per ton, leaving the net earnings per gross ton \$.3027.

GENERAL REPAIRS:

The possession of the steamer Andaste was acquired by purchase from The Lake Superior Iron Company at the end of the season of 1899. No extensive repairs were made to this vessel, but she was found to be in need of attention in all departments, either in the way of renewal or repair before going into sommission for the season 1900. Adding the General Repair Account of \$1,158.52 and the Fitting Out Account of \$2,539.10 together, shows a total of \$3,697.62 as the cost of replacement and repair.

No extensive items of repair seem to be necessary before the steamer goes into commission again, though there will be a number of matters of a minor nature that must be given attention. The largest single item of repair will perhaps be the renewal of hatch covers; this cost will be in the neighborhood of \$250.00

ACCIDENTS:

Collision with Ashland Ave. Bridge, Chicago. On September 11th, while passing through the draw of the Ashland Ave. bridge, during the shift from Sill's Coal dock to the Minnesota Elevator, the Andaste's starboard quarter (abreast the boiler house between the main and lower sheerstrake) received a dent from a projecting timber on the bridge abutment. The depression in the plate is about three-quarters of an inch, and between two frames, about three feet above the light water line. No further damage was done.

Collision with Canal Boat "First National". While bound down the Chicago
River on the evening of October 30th, grain laden, the Andaste is claimed to have struck
the Canal Boat First National, which was lying at the Norton Mills at Madison street
bridge, loading grain. It is claimed that the damage consisted of an injury to the First
National and the wetting of a thousand bushels of wheat, which was sold at a loss, and
a claim agregating \$1,567.60 has been made against the Andaste on this account. What has
lead to confusion in this case is that the Captain and the men on the Andaste have all
testified that they did not have the First National, while the men on the First National
all testify that the Andaste did strike her. A mass of correspondence has grown out
of the case and we forwarded to our underwriters, copies of all papers, with request for
instructions. Acting upon their advice, we have notified these people that we decline
their claim.

Stranding, Middle Ground, St.Clair Flats. On November 10th, when abreast the upper end of the Middle Ground, the Andaste met and passed port to port an up-bound steamer, and in doing this, her wheel was put first to port and as she get passed was put back to starboard, end then to port, to steady the vessel on her course. As the wheel was being steaded after this last porting, the steering engine broke, and the vessel continued to swing to starboard. The lashings of the hand steering gear were immediately removed, and an attempt made to steer the vessel by hand, but it was found impossible to do this on account of the cable sticking.

The Andaste's engine was backed at once until she swung around and headed up the river, and then, in an attempt to keep her off the Middle Ground her engines were worked ahead and an attempt made to steer her, but without success, and she stranded near the head of the Middle Ground.

It was found that the port valve stem of the steam steering engine had broken. This engine was apparently in perfectly good order before the accident, and the breaking of the valve stem appeared to be due to a latent defect. The cost of this accident was \$96.62, claim for which amount hasbeen sent to our uncerwriters.

SCHOONER CHATTANOOGA, 1900.

GENERAL OPERATIONS:

The Chattanooga sailed from the port of Cleveland on her first trip, on April 22, 1900, and finished discharging her last cargo of iron ore at Cleveland, on December 6, 1900, having been in commission 229 days.

This vessel was in tow of the steamer Pioneer during the entire season, having made 19 round trips and carried 19 cargoes of iron ore from Marquette, Mich., at the contract rate of \$1.10 per gross ton. The average receipts per gross ton freight carried for season 1899 was \$1.0261.

The cost of carrying 73,922 gross tons of freight during season of 1900 was \$.7052 per gross ton, as against \$.5724 for 1899, an increase of \$.1328 per gross ton. This increase is due to the fact that unloading charges for one were advanced for the season 1900 and a higher rate of wages paid for labor. The vessel also had some extensive repair work done in the way of calking, etc.

GENERAL REPAIRS:

Of the more important repairs may be noted the following:

It is the usual practice to give a new ship a thorough re-calking at least by the second year after she has come out. This schooner was accordingly calked outside from the light water mark to plank sheer, every seam being run with two threads of oakum, and in cases where need, three and four threads were run. Inside she was reamed and two threads of oakum driven and horsed in, then two more threads were driven and horsed. In this work, 69 bales of oakum were used. All seams inside and out were painted, the requirements being 75# white lead, 315# red lead and 1 bbl. linseed oil. The cost of the above work in material and labor was \$1,350.80.

Deck beams, five in number, were found to be broken directly in the center of ship.

These were repaired by the placing of oak beams 26° X 8" X 10" on top of the beams proper and belted to same by six screw belts and six drift belts each. This work, together with a new gaff and sundry repairs in the way of engraving pieces where needed, cost \$116.88.

It was found that the stockless anchors, in heaving in, were cutting into the planking, and it was therefore determined that this must be protected. Accordingly, there
was placed in the way of this contract, two steel plates 5.6° wide 14° long on four steel
plates 5.6° long and 18° wide, all of 1/4° thickness. The cost of this work was \$114.26.

Chattanooga For the better preservation of the ship, she was thoroughly "bored" for brining purposes. In the forward compartment, 902 3/4" holes, 480 3/4" midship 1410 3/4" holes, after These holes were put in on the frames in every case, three rows above and three below the deck beams. The labor for this work cost \$167.75. Eighty barrels of salt were used in the work of brining. The aggregate General Repair needed on this boat before going to sea again will not be great. This boat is rather large to handle, without some application of steam or hydraulics to the steering gear, and it may be found desirable to adopt something in that direction. ACCIDENTS: COLLISION WITH SCHOONER GUIDE, APRIL 30th. Coming down the St Clair River on this date, the Chattanooga collided with a little schooner, which proved to be the Guide, and which was lying in Sarnia Bay at anchor. Slight damage was done to the starboard bow of the Chattanooga, and some damage to the Guide. The claim amounted to \$118.82 and was sent to our underwriters. STRANDING NEAR PORT HURON AND BAR POINT LIGHT. In coming down in tow of the Pioneer on June 2d, in passing Bar Point lightship at the mouth of Detroit river, both vessels under check, the Chattanooga went aground on east bank of the channel. vessel was released by tugs on the following day. The cost of this accident amounted to \$652.13, which was sent to our underwriters. STRANDING, LAKE ST CLAIR, JULY 25th. About 3:12 pm. on this date, the Chattanooga was proceeding along about the center of the channel, just outside the lower end of cut in Lake St Clair when she struck bottom on what appeared to be a bar or mound in the channel, and remained fast, breaking tow-line. The water appeared to be lower than usual. The Chattanooga was released about 10:30 the same evening, with the aid of the Pioneer and tug. The cost of this accident was \$756.07, and claim for this amount was sent to the underwriters. STRANDING, LAKE ST. CLAIR, SEPTEMBER 14th. While in tow of the Pioneer and about a quarter of a mile outside of the gas buoy marking the end of Lake St Clair cut, the Chattanooga went aground, running out about four inches forward. A portion of her cargo had to be lightered, and she was released on the morning of September 19th. The total expense amounted to \$2,244.65, which claim has been sent to the underwriters.

#In explanation of the fact that the Chattanooga drew one inch more water in 1900 than in 1899 on ore cargoes, but carried an average cargo of 37 tons less, the Captain states that he thought it wise to put less ore in the middle of the boat and more at both ends, believing that with a better distribution of cargo there would be less strain on vessel.

Mining_MS86100_2066_1900_2 of 2_114.pdf

GENERAL OPERATIONS:

The steamer "E. S. Pease" towing the schooner "Planet" sailed from Cleveland on their first trip April 25th, 1900, and finished unloading their last cargoes of ore at Cleveland on December 7, 1900, having been in commission 227 days.

The Pease towed the Planet all season, with the exception of one trip when she made the round trip alone and her consort remained at Cleveland repairing damage sustained by collision with the schooner "Olive Jeanette".

These vessels were engaged, during the entire season, in carrying up cargoes of coal to Marquette at the contract rate of \$.50 per ton and down cargoes of ore from Marquette at the contract rate of \$1.10 per gross fon.

GENERAL REPAIRS:

The repairs on the Ponso during the past season were of a very minor nature, the total amount for the entire year being but \$124.03.

A considerable repair, however, was found necessary to put the Planet into shape for another season's business. Before the work was commenced, the vessel was theroughly inspected by Capt. C. E. Benham and the repairs made as per his report. The work done may be generally summed up in the following:

HOLD: New floor ceiling, 2 inch oak skantling and repairing keelson, new keelson dunnage for the five hatches. Repairing deck beam and new stanchion No.5 hatch. New after pump box. Forward pump box repaired. All new lumber, and planks edge-bolted.

DECK: All new hatch dunnage in five hatches; Repaired six hatch irons and got four new ones; No.5 hatch, repairing one hatch coaming, one piece 5/8° oak; No.4 hatch, coaming new 6 X 12 oak and one new fore and aft 8 X 12 oak on the starboard side also one new strong back 5/6 oak---hatch coaming 37 feet long; No.3 hatch, one half new coaming 20 feet long 6 X 12 oak and one new strong back 6 X 6 oak; No.2 hatch, one new strong back 6 X 6 oak; No.4 hatch, 90 feet 3 X 5 deck planks. No.3 hatch, 65 feet 3 X 5 deck planks and No.2 hatch 21 feet 3 X 5 deck planks. Also repairing cabin coaming on starboard side, 4 X 6 oak. The entire deck was recaulked with two threads of oakum throughout.

CARIN: New floor in galley, dining room and Captain's room, of one inch pine.

RAIL: Starboard Side: 75 feet 5 X 16 oak; one pece new stringer aft 4 X 10 inch X 4

feet long. One new capstan aft and new bolts for same. Refastoning four timberheads and two new ones 8 X 8 X 4 6 long and also new partners.

Port Side: Engraving pieces aft 2 X 5 X 3 feet long; One new cabin window; one glass binnacle box; one new piece bulwark 3 X 6 X 6 feet long, of oak.

MASTS: Reduced fore boom and missen been; reduced the fore gaff, main boom; repaired the missen gaff; new foremast heed shroud iron and two new stays; reduced the missen topmast. One new missen stay and three turnbuckles and new stay iron; one anchor iron 3 inches kang X 1/2 inch X 8 feet long; One windless break repaired and dayey lock redrilled and keys for same. The minusest having become as degayed, it was thought best to remove it altogether.

Fonder strakes 36 feet 3 X 5 oak. Fore rigging chain plate fender strakes 12 plate

feet; 3 X 5 oak: New chain, for mantheast shroud; Two new pieces 4X6X8 long in hull planking. Stern waste gates rebolted (six) recaulking hull and upper works with two threads of oaksmathroughout.

Starboard Side: Hall and upper works recaulted with two threads of cakum.

250 feet 4 X 6 pine repairing hall works and 50 feet 4 X 6 cak. 25 new starchions 4 X 6 cak. Hiesen chain plate fenders 16 feet 3 X 5 cak. Fore chain plate fenders 12 feet 3 X 5 cak. Repairing five waste gates and one new one.

Penders 36 feet 3 X 5 cak; 50 feet fender strake 3 X 10 cak; 2 pieces 10 X 10 pine, 10 feet long upper works fantail. One piece planking in hall 2 X 3 inches X 3 feet long. Anchor bill boards port and starboard side 4 feet long by 18 inches wide by 3 inches, oak. Two elm fenders 14 feet long 6 X 10 inches for forward.

As a matter of record, some of the principal costs are assurized below:

Lumber entered into these repairs to the extent of \$455.35; labor in making wood repairs, \$345.25; smiking, \$876.00; oakum, lead, bolts, spikes etc., \$263.12; blackedthing work \$55.48.

On the first trip of the Planet, she began leaking, but she was sent the second trip in order to ascertain whether the leak would be a personent one; it continued, however, to such an extent as to the making of 20 inches of mater per hour, keeping the crew employed at a pumps night and day. The bettom of the Planet had not been caulked since

the present ewnership (ten years). Accordingly, on May 15th, she was put into drydock at Gloveland and was in dock three days. It was found that the first thread of calum was sampletely rotton and this was all taken out and two threads of calum driven all over. All the butts were sheet-leaded, so that in the working of the vessel the calum would not work out. This work cost \$579.73. It is proper to state here that the planking was found to be in excellent condition for a best of the age of the Planet, in fact it was remarked that there are few of the later wooden beats that have as good outside planking as in the bettom of the Planet.

At the time that the repair was made for the damage austained by the collision with the achooner Olive Jeanette as hereinafter mentioned, the opportunity was embraced to raise the forecastle deak of the Planet two and one-half foot, which change has added very materially to the appearance of the boat and to the convenience and confort of the man.

ACCIDENTS:

The Pease came through the season without socident of any kind.

For the Planet, however, there are two accidents to record:

COLLISION WITH THE BARGE OLIVE MANETTE IN SOO RIVER MAY 2nd; The Pease and Planet were proceeding up the River under a low rate of speed and when in the neighborhood of Poet's dock the Pease exchanged passing signals of one blast with a down-bound steamer, which was making the turn at Point max Pines light, which steamer afterwards proved to be the lesea, having in tow the Olive Jennette. The Pease and Planet were well over to the starboard side of the charmel and the losce met and passed them at a safe distance, under considerable speed. The Clive Jeanette, however, did not follow her towing steamer, but continued her swing to port, apparently under the starboard helm with which she had some around the bend at Point Aux Pines Light, and own off to port across the channel heading for the towline between the Pease and Planet at a point just astern of the Pease, then following down along the tewline, struck the Planet nearly head on, twisting the bow of the Planet around to starboard and doing large damge to the forward part of the Placet. As seen as the sheer of the Clive Jeanette to pert was observed by those on the Planet, the holm of the latter vessel was put bard a part, but it was impossible to avoid the cellision. The Pleast, however, swang somewhat to starboard under her hard a port hole before the two vegoals once together, so that the force of the blow twisted the stem on the bew of the Planet around to starboard. The Planet mut aground on the starboard mide of the

channel almost immediately after the collision. In the mention, those on board the Pease had out the tendine which belonged to the Planet, in order, if possible, to Jesses the force of the blow. After the collision the Pease rounded to, came back and lay along-side the Planet until daylight, when an examination was made of the bow of the Planet and it was ascertained that she could be navigated to the Soc. The Pease then pulled her off and towed her back to the Soc, arriving there about 6:30 a.m. of July 2nd, Here temporary repairs were made, and she proceeded to Harquette, where she leaded a part cargo of iron and came down to Cleveland, where she went into drydock and was repaired. The cost of repairing this damage became a chalm against the owners and underwriters of the Olive Jeanette, which claim was duly adjusted and paid.

STREES OF MEATING IN LAKE SUPERIOR, HOVESHER 29th: It had been blowing a gale from the northwest for about two days and there was a transmious sea. When the vessels had get out five or six miles into Lake Superior, they were laboring very hard. The Planet strained badly in the heavy sea and finally spring a leak. The Pease was signalled that the Planet was in distress and turned about and ran into Marquette, where the vessels arrived about neen of the came day. A diver was employed and he worked in the neighborhood of half a day coulking the somes of the Planet which had been opened up below the water line by her straining. As examination was then made and it was found that her leaks had been stopped and it was decided that it would be safe to precent on her voyage. At 5 o'clock on the same evening, the vessel was agin started on her veyage. There was still a very heavy sea entside, and, on the way down to the See, the vestel labored heavily and strained, so that she again began to leak. She arrived at the See on the evening of Movember 30th. It was decided that it would not be prudent to preceed with the vessel in her than strained condition without a steam pump and she lay at the Sec until December let, when a steem pump was put aboard of her and she again started. The procoeded on her voyage in the usual memor and without further medident, it being necessary to operate the steam many off and on at different times to keep the vessel free from water. She arrived in Cleveland December 5th at 7 o'clock p.m., and it was decided it would be necessary to place her in drydock to make the repair rendered necessary by the atraining above referred to. The claim against the underwriters arising out of this accident was \$1,069.21, and the same has been forwarded to the underwriters for adjustment

GENERAL OPERATIONS:

The Pontiac sailed from the port of Cleveland on her first trip of the season of 1900, April 21st, and arrived at Cleveland on her last trip, ready to lay up, November 2nd, having been in commission 196 days. She made 26 trips, carrying 26 cargoes of freight.

This steamer traveled 35,083 miles, carrying 84,410 gross tons of freight, from which the net profits were \$37,169.23. The average rate of freight received was \$1.0252 per ton, against \$.7045 in 1899, an increase of \$.3207. The vessel was engaged in carrying ore from Marquette to Lake Eric ports for the first 21 trips of the season, at the contract rate of \$1.10 per ton. The last five trips she was engaged in carrying grain from Chicago as follows:

l cargo corn to Pairport, 2 cargoes corn to Buffalo, 1 cargo corn to Depot Harbor, 1 cargo wheat to Goderich.

The cost of operating was \$.5849 per ton, as against \$.4655 in the preceding year, an increase of \$.1194 per gross ton of freight carried; this increase is due to several reasons, viz. increase in rate of wages, cost of handling cargoes, fuel, etc.

The average ore cargo carried from Lake Superior was increased 26 tons over 1899, a gain of .79%.

GENERAL REPAIRS:

The General Repair account of this boat is made up of no very large items but of a number of minor ones. As the most important items of expenditure, however, there may be mentioned the following:

The bilge strake was very defective and had to be substantially renewed; besides, some repairs had to be made in the wooden floor ceiling. The amount expended for this work was \$275.77. New walestrakes were also put on the port and starboard bows; the starboard bulwark rail was repaired and some iron stanchions put from bulwark to deck, to support the bulwark. This work cost \$118.49.

The covering of the Pontiac's boilers had been on since 1890 and had become defective in spots. Mangnesia Sectional Covering is such that any portion which is not destroyed or badly worn may be used again in making up a renewed covering. The missing blocks were supplied and the whole of this covered with wire and finished with plastic, and this in turn covered with 28 gauge galvanized sheet iron, painted on both sides, extending six feet each way from center, on the three boilers. This work cost \$262.64.

The work to be done on the Pontiac before she goes to sea again is not of an important nature. The total cost will be covered by a few hundred dollars. Among the items may be mentioned, some patching and caulking of the turtle deck, some new wale-strake caps, re-canvasing of the after house, some additional limber planks to be put in that were made to do another year from last year's repair, and a new commutator for the dynamo.

ACCIDENTS:

No accidents causing any cost in money were encountered, although as a matter of record, the following is appended:

On June 29th, just before entering the Lower Flats in Hay Lake, the Pontiac was endeavoring to pass a lumber tow, but they refused to allow the Pontiac to pass, and in order to avoid a collision with one of the tow barges, the Pontiac's engines were reversed, and in so doing, she got partly across the channel. The steamer Rees with the barge Norton in tow then blew to let them pass under a two whistle signal. The Pontiac's engine was stopped and the Rees passed alright, but the barge Norton took a sheer, and before recovering she touched the Pontiac lightly on the stern, fouling our kedge anchor, which the Norton carried off on her deck, and also doing some slight damage to the Pontiac's bulwarks. The Norton sustained damages to the extent of \$341.01, which the Wilson Transit Company tried to get us to pay, on the claim that the Pontiac had no business to try to pass in these waters, and that the Pontiac had been running too fast. We maintained that such was not the case, and no claim has been pressed.

At about 10:30 pm October 20th, the Pontiac was loading grain at the Santa Fe elevator in Chicago. At this time the vessel was shifted astern a little, and while so doing, one of the grain trimmers, named Dorrey Mahon, had a fall, as he claimed, hurting his hip and back. Mahon wrote us a letter asking for help to pay doctor's bill, to which we paid no attention. Then attorney J F Clark of Chicago wrote us stating that Mahon had placed the matter in his hands for collection, but we advised him on November 27th that there was nothing in the claim whatever. The ladder in use at the time had sides to it and the mate had come up on it just a few minutes previously. There was a crack along the side, but this did not disable the ladder from use. The ladder was cracked from the trimmers jumping on it going up and down, and it is thought that Mahon's fall is due to the fact that he was probably intoxicated.

Kelley, stc.

As a matter of general record, it will be noted that wages advanced quite materially
on all the vessels in the season of 1900, over the preceding year. For the season of
1900 the ?Lake Carriers' Association established wages at the beginning of the season and
no change in rates was made during the year. During the season of 1899, however, the
basis of wages was changed three different times. The following calculation will show
what percentages of increase prevailed during the season of 1900 as compared with the
preceding year.

STEAMERS:

The first card for 1899 was 22.3% less than the card for 1900; the second card for 1899 was 17.5% less than the card for 1900, and the third and last card was 1.6% less than the card for 1900; or in terms of average the card for 1900 was 13.8% higher than for 1899.

CONSORTS:

The first card for the season 1899 was 31.2% less than the card for 1900;

The second card for 1899 was 25.7% less than the card for 1900, and the third and last card was 8.8% less than the card for 1900; or in terms of average, the card for 1900 was 21.9% higher than for 1899.

The foregoing figures are applicable to all vessels in our fleet, and are inserted here only as a matter of convenience and to better preserve the record.
