STATEMENT - COST OF SPOTTING CARS

816

COMPARATIVE STATEMENT - PRODUCTION COSTS .

817

January 1, 1920.

Mr. Wm. G. Mather, Pres.,
Cleveland, Ohio.

Dear Sir:-

I beg to submit the following report of the operations of the Mining Department for the year 1919. The inventories, maps, and statements relating to this report have gone forward to you under separate cover. The colored portions of the maps show the work for the year. The reports of the different mines of the Company were made by the Superintendents in Charge and the reports of the Mechanical, Engineering, Geological, Safety, and Welfare Departments by the heads of these departments.

All of our Superintendents and Engineers who were in Service have returned to work during the year. Mr. Elliott arrived the first of August and has resumed his position as General Superintendent. Mr. W. R. Myers, formerly Superintendent of the Spies Mine, has been transferred to the Mesaba Range as Assistant to Mr. Barber; Mr. Stevenson is now in charge of the Wade Mine as Superintendent; Messrs. Hayden, Nicholson, Mitchell, and Miller have returned to the Engineering Department. Mr. Brewer, formerly Mr. Jopling's Assistant, has been transferred to Hibbing, as Superintendent of the Boeing Mine, and Mr. Chenneour promoted to the position of Assistant Chief Engineer.

ANNUAL REPORT

OF THE

MORO MINE

(1919)

There was no work done at the Moro Mine during 1919. This mine closed entirely.

ANNUAL REPORT

OF THE

LAKE MINE

(1919)

Production and Shipments.

The Lake Mine worked 298 days in 1919, and produced 315,119 tons of ore, an average of 1,057 tons per day. As the stock-piles were not cleaned up, there was no overrun from them credited to production for the year. There is, however, an accumulated overrun of probably more than 20,000 tons in the stock-piles. The mine worked on double shift throughout the year.

19,290 tons of rock were mined, an average of 65 tons per day. All rock-work except timber-roads was incidental to mining.

Table I.

Production by Grades.

Grade	Total for Year		Average per Day	
	1919 Tons	1918 Tons	1919 Tons	1918 Tons
Lake	207,114	223,492	695	750
Lakedale	<u>108,005</u>	<u>214,622</u>	<u>362</u>	<u>720</u>
Total Ore	315,119	438,114	1,057	1,470
Rock	<u>19,290</u>	<u>19,285</u>	<u>65</u>	<u>65</u>
Total Ore and Rock	334,409	457,399	1,122	1,535

Table II.

Shipments.

Grade	Pocket Tons	Stock-Pile Tons	Total Tons
Lake	148,937	25,223	174,160
Lakedale	<u>28,783</u>	<u>31,199</u>	<u>59,983</u>
Total	177,720	56,422	234,143

All the Lake ore shipped from the pocket and all except a small tonnage of this grade shipped from the stock-pile was crushed. Neither stock-pile was cleaned up, and there were no shipments from Presqu' Isle.

Table III.

Stock-Pile Balances - Dec. 31st, 1919.

Grade	At Mine Tons	At Presqu' Isle Tons	Total Tons
Lake	54,808		54,808
Lakedale	<u>128,279</u>	<u>48,226</u>	<u>176,505</u>
Total	183,087	48,226	231,313

Table IV.

Division of Product by Levels.

Level	Ore Tons	Rock Tons	Total Tons
960' Sub-Level	39,773	448	40,221
945' Sub-Level	109,385	3,590	112,975
925' Sub-Level	90,528	5,842	96,370
910' Sub-Level	50,922	5,830	56,752
890' Sub-Level	18,860	2,690	21,550
880' Sub-Level	3,772	450	4,222
Fifth Level	<u>1,879</u>	<u>440</u>	<u>2,319</u>
Total	315,119	19,290	334,409

Table V.

Production by Months.

Month	Days	Ore Per Day Tons	Lake Tons	Lakedale Tons	Total Ore Tons	Rock Tons	Total Ore and Rock Tons
January	26	1,279	20,301	12,958	33,259	1,970	35,229
February	23	1,240	19,716	8,794	28,512	2,655	31,167
March	26	1,263	22,728	10,107	32,835	1,715	34,550
April	24	1,099	19,247	7,139	26,386	1,540	27,926
May	25	1,095	17,039	10,324	27,363	1,310	28,673
June	24	1,075	14,852	10,939	25,791	1,690	27,481
July	24	961	14,228	8,834	23,062	1,190	24,252
August	26	1,031	18,712	8,090	26,802	1,565	28,367
September	25	940	15,195	8,295	23,490	1,830	25,320
October	27	997	19,498	7,422	26,920	1,590	28,510
November	24	840	11,673	8,477	20,150	1,120	21,270
December	24	856	13,923	6,626	20,549	1,115	21,664
Year	298	1,057	207,114	108,005	315,119	19,290	334,409

Table VI.

Delays.

There were no delays that caused a loss of product during the year. Minor delays caused no loss, because of the great excess of hoisting capacity over production.

Table VII.

Estimate of Ore Reserves.

925' Sub-Level	2,000 Tons
910' Sub-Level	33,000 "
Fifth Level	94,000 "
Below Fifth Level	<u>10,000</u> "
Total	139,000 "
Less 10% Rock and 10% Loss in Mining	<u>28,000</u> "
Net Total	111,000 "

A factor of 11 cu. ft. per ton was used.

Exploration.

Underground Diamond Drilling.

In December 1916 Hole No. 502 was started vertically downwards from the cross-cut on the fifth level 420 feet south of the shaft, and was down 520 feet in diorite at the end of the year. This hole was continued to a depth of 1,536 feet, finding only diorite and unaltered iron-formation. Another hole, No. 503, was drilled to the north from the same location at an angle of 67° below the horizontal to a depth of 1,556 feet, but found no more than No. 502.

No. 504 was then drilled down from the fifth level at the south end of the south cross-cut at an angle of 87°, S. 17° W., and was stopped at a depth of 350 feet. It found only diorite and unaltered iron-formation. The total drilling amounted to 2,972 feet.

SURFACE.

New Construction.

E and A. No. 370 - Electric Air-Compressor.

A 2500 ft. Type PRE-2 electrically driven air-compressor, purchased from the Ingersoll-Rand Co., was erected in the engine-house, in the place previously occupied by the old Ideal engine. Work was started in February and completed in June. There was some delay, waiting for the erector to finish setting up the two compressors at the Cliffs Shaft Mine. The cost of installation was considerably higher than the estimate on account of the cost of removing the Ideal engine and its foundations.

Repairs to Coal-Dock.

The coal-dock was thoroughly repaired in April.

Trestles.

A new trestle was built east of the Lakedale pile in July, and was connected to the stock-pile in October. Little ore was shipped from this pile in the summer, and the new trestle gives additional room sufficient for the winter's production. The west trestle was extended 4 bents in November. Both trestles are for single-track only.

LAKE MINE.

The ground around No. 1 shaft was filled with rock again in July, and one track was taken out, so as to make room for the new stock-pile.

UNDERGROUND.

Development.

At the end of the year a winze was sunk 21 feet from the fifth level to the bottom of the ore-body to test the ultimate depth. Another winze will be sunk, from which part of the ore below the fifth level can be mined while the ore above is being exhausted. There is about 10,000 tons of ore below the fifth level. No other development is necessary, except opening new sub-levels.

The number of contracts was reduced during the year from 40 to 25, the average number being 31, of which 15 were stoping, 10 drifting in ore, 2 repairing and 4 in rock. The number of contracts will be reduced further early in 1920.

Stoping.

The same policy has been maintained in stoping as during the last four years, and the east and west ends of the ore-body have been worked down rapidly, leaving a wide pillar in the middle of the vein to protect the timber-roads and air-ways. The ends of the deposit are worked down low enough for economical mining, and the ventilation pillar is sliced off at the same rate as the rest of the mine. Following this system the ore west of the ventilation pillar has been mined back to Raise "WC," and little more can be taken from this side until the last operations, because it would bring too much weight on the main haulage-ways. The ore on the east side has been worked out as far west as Raise "EC" on the 925 foot sub-level, but is being opened on the 910 foot sub-level for a length of 650 feet east of the main cross-cut.

At the beginning of the year the ventilation pillar and much of the ore east of it on the 960 foot sub-level were still in place. This sub-level was finished entirely in July. The ore west of the ventilation pillar on the 945 foot sub-level was finished in 1918 and the ore east of the pillar was

being opened. This sub-level was completely mined out in 1919. The 925 foot sub-level was opened up and partly mined west of the ventilation pillar in 1918. In 1919 the west side was finished early in the year, and practically all the ore east of the ventilation pillar was mined. There were seven gangs working here in December.

The 910 foot sub-level was opened and the ore exhausted on the west side early in the year and the ore west of Raise "WC" on the 890 and 880 foot sub-levels, which are the lowest subs on this side, was also exhausted. The 910 foot sub-level has been opened and stoping has started east of the ventilation pillar. There are now ten gangs working on this sub-level. On the 890 foot sub-level two gangs are stoping on the west side of the ventilation pillar, and one gang is opening up on the east side.

LAKE MINE.

COMPARISON OF COST SHEETS FOR 1918 AND 1919.

The Lake Mine worked on double shift during all of 1918 and 1919. There was no stock-pile overrun in either year, as the piles were not cleaned up.

In 1918 wages were increased 10% successively on April 16th, August 1st, and October 1st. There was no change in 1919, so that the average wages for 1919 were 18.4% higher than the 1918 average.

Production decreased materially during the year, as the size of the ore-body decreased.

Production.

	Total Tons	Per Day Tons
Year 1918	438,114	1,470
Year 1919	<u>315,119</u>	<u>1,057</u>
Decrease	122,995	413

Labor.

Surface	19.80	15.16
Underground	<u>6.41</u>	<u>5.91</u>
Total	4.84	4.26

Cost of Production.

	<u>1918</u>	<u>1919</u>
Labor	\$ 1.033	\$ 1.300
Supplies	<u>.335</u>	<u>.468</u>
Total	\$ 1.368	\$ 1.768

E and A. 370. covering the cost of installation of a new air-compressor was charged out entirely against the ore for the year. The cost of operating the compressor was also greater for the mine than it would have been with the old machine. The total increase on this account amounted to ten cents a ton. The increase in average wages amounts to nineteen cents more. The increase in cost per ton is 40 cents, which leaves a balance of 11 cents to be accounted for. The extra cost was partly due to new trestles to handle the winter's output, but mostly to decreasing production with relatively small reduction in overhead expense.

GENERAL EXPENSE.

No. 26 - Insurance.

1918	\$ 996.88	\$.002
1919	<u>854.52</u>	<u>.003</u>
Decrease	\$ 142.36	
Increase		\$.001

Riot insurance in 1918 cost \$ 797.41, and \$ 657.12 in 1919, a decrease of \$ 134.29.

No. 27 - Engineering.

1918	\$ 996.79	\$.002
1919	<u>1089.14</u>	<u>.003</u>
Increase	\$ 90.35	\$.001

Central Office charge.

No. 28 - Analysis.

1918	\$ 9680.56	\$.022
1919	<u>11089.31</u>	<u>.035</u>
Increase	\$ 1408.75	\$.013

The increase is due to 18.4% higher wages in 1919.

GENERAL EXPENSE. (Continued)

No. 30 - Personal Injury Expense.

1918	\$	11619.97	\$.027
1919		<u>5458.74</u>		<u>.017</u>
Decrease	\$	6161.23	\$.010

There were two fatal accidents in 1918 and none in 1919. The principal items were as follows:-

	1918	1919
Medical & Hospital Exp.	\$ 1436.70	\$ 1268.80
Compensation Charges	8359.68	1021.02
½ Day Funeral Expense	797.82	
Hospital Deficit	<u>1025.77</u>	<u>3168.92</u>
Total	\$ 11619.97	\$ 5458.74

No. 30a - Mine Office.

1918	\$	11179.35	\$.026
1919		<u>12544.98</u>		<u>.040</u>
Increase	\$	1365.63	\$.014

Increase in cost for clerk hire was \$ 699.10. Nearly all of remainder is in Central Office charges to Mine Office Acct.

MAINTENANCE.

No. 125 - Tracks and Yards.

1918	\$	1930.61	\$.004
1919		<u>4042.21</u>		<u>.013</u>
Increase	\$	2111.60	\$.009

The increase is mostly in charges for railroad tracks in accordance with rulings of the Railroad Administration and to cost of filling and grading near old No. 1 shaft.

No. 126 - Docks, Trestles and Pockets.

1918	\$	1759.24	\$.004
1919		<u>1568.52</u>		<u>.005</u>
Decrease	\$	190.72		
Increase			\$.001

In 1918 the rock-dump cost \$ 1242.58 and railroad pockets \$ 516.66. In 1919 the rock-dump cost \$ 1067.11 and railroad pockets \$ 501.41.

No. 127 - Buildings.

1918	\$	3272.12	\$.007
1919		<u>2908.01</u>		<u>.009</u>
Decrease	\$	364.11

Total	\$ 3272.12	\$ 2908.01

No. 128 - Shop Machinery.

1918	\$		\$	
1919		<u>244.97</u>		<u>.001</u>
Increase	\$	244.97	\$.001

The principal item was chain-blocks---\$ 170.

No. 129 - Boiler Plant.

1918	\$	4666.32	\$.011
1919		<u>1917.30</u>		<u>.006</u>
Decrease	\$	2749.02	\$.005

In 1918 a coal crusher was installed, the economizer was rebuilt, new tubes were put in the feed-water heater and a new bottom in the 12 ft. cold water tank.

MAINTENANCE. (Continued)

No. 130 - Hoisting Machinery.

1918	\$	647.88	\$.001
1919		<u>1937.09</u>		<u>.006</u>
Increase	\$	1289.21	\$.005

No hoisting ropes were charged out during 1918. In 1919 hoisting ropes cost \$ 968.81. Repairs to hoist in 1919 included \$ 200.00 for balance due Sullivan Machinery Co. on cost of new drum casting for skip hoist installed in 1917.

No. 131 - Compressors and Power Drills.

1918	\$	325.25	\$.001
1919		<u>20003.86</u>		<u>.064</u>
Increase	\$	19678.61	\$.063

The 1919 charges are mostly for E and A. 370, new electric air-compressor, and for circulation pump and motor.

No. 132 - Pumping Machinery.

1918	\$	2443.23	\$.006
1919		<u>877.24</u>		<u>.003</u>
Decrease	\$	1565.99	\$.003

In 1918 new parts for the Prescott steam-pump cost \$ 126, and a 4-inch steam-line cost \$ 648.95. A new gear and pinion for the electric pump cost \$ 830.

No. 133 - Top Tram Engines and Cars.

1918	\$	1123.96	\$.003
1919		<u>1675.60</u>		<u>.005</u>
Increase	\$	551.64	\$.002

New rope cost \$ 100, repairs to cars \$ 200, and balance of increase is due to 18.4% increase in average wages.

No. 134 - Skips and Skip-Roads.

1918	\$	1337.31	\$.003
1919		<u>904.48</u>		<u>.003</u>
Decrease	\$	432.83	\$.000

In 1918 repairs to skips, cages and guides cost \$ 838.88.

No. 135 - Underground Tracks and Cars.

1918	\$	1975.66	\$.005
1919		<u>2949.36</u>		<u>.009</u>
Increase	\$	973.70	\$.004

	Labor	Supplies	Total
1918	\$ 672.53	\$ 1303.13	\$ 1975.66
1919	<u>1865.46</u>	<u>1083.90</u>	<u>2949.36</u>
Inc.	\$ 1192.93	De. \$ 219.23	In. \$ 973.70

During 1918 underground trackman's labor was all charged to main line tracks. During 1919 the trackman's time was divided between main line tracks and underground tracks, as it was found that a considerable portion of his time was spent putting in frogs and switches for sub-level tracks.

No. 136 - Electric Tram Plant.

1918	\$	9504.53	\$.022
1919		<u>7976.36</u>		<u>.025</u>
Decrease	\$	1528.17		
Increase			\$.003

The west side of the fifth level was finished in 1919. Fewer motors and cars are in use.

MAINTENANCE. (Continued)

No. 137 - Telephones and Safety Devices.

1918	\$	1802.30	\$.004
1919		<u>2130.79</u>	<u>.007</u>
Increase	\$	328.49	\$.003

The principal items were as follows:-

	1918	1919
Mine telephones	\$ 194.49	\$ 224.19
Safety Gates and Underground Improvements	1585.31	1783.40
Injured persons	22.50	4.88
Sign bonds and signals		.34
Miscellaneous:-		
Engine House, Electric Compressor		<u>117.98</u>
Total	\$ 1802.30	\$ 2130.79

No. 139 - Lake Angeline Drainage.

1918	\$	2321.48	\$.005
1919		<u>1071.52</u>	<u>.003</u>
Decrease	\$	1249.96	\$.002

Repairs to pipe-line and pumps were much lighter in 1919 than in 1918.

No. 140 - Fire Expense and Damage.

1918	\$	211.12	\$.000
1919			
Decrease	\$	<u>211.12</u>	\$.000

There was no fire in 1919. In 1918 there was a fire in the coal-dock.

MINING EXPENSE.

No. 150 - Air-Pipes.

1918	\$	1830.56	\$.004
1919		<u>1881.79</u>	<u>.006</u>
Increase	\$	51.23	\$.002

The decrease in total charges is due to less air used and to shifting boiler-house expense to hoisting after the new compressor started.

No. 151 - Compressors.

1918	\$	19735.27	\$.045
1919		<u>17172.65</u>	<u>.054</u>
Decrease	\$	2562.62	
Increase			\$.009

The increase is partly due to higher average wages and mostly to shifting boiler-house expense to the hoist after the new compressor started.

No. 152 - Hoisting.

ANNUAL REPORT
OF THE
CLIFFS SHAFT MINE

(1919)

Production and Shipments.

The Cliffs Shaft Mine worked 298 days in 1919, and produced 366,773 tons of ore, an average of 1,231 tons per day. No ore was shipped from the crushed stock-pile and very little from the lump pile. Practically no crushed ore was shipped from the pocket, and lump shipments were not large enough to take care of all the ore of this grade hoisted during the shipping season. The ore was screened during most of the year, but in part of May and June it was necessary to crush the entire product, as the lump stock-pile was full. Additional room for lump and crushed ore was provided for stocking ore during the winter. The trestles and engine for the lump ore are nearly ready for service.

11,128 tons of rock were produced during the year, all of which was dumped underground.

The mine worked underground on single-shift during the year, hoisting being done on both shifts. The average number of contracts was 60.

Trammers were particularly scarce during the summer months, and there was a shortage throughout the year. There was no scarcity of miners or of surface labor.

Nearly all shipments stopped in August during the dock-mens' strike.

Fatal Accident to Henry Karkkainen.

At about 11:30 P.M. on Thursday, July 10th, Henry Karkkainen, a Finn, tramping rock on the thirteenth level in "B" shaft, was struck by a piece of ore, which fell from the back, while he was standing by his car at the chute. The piece of ore struck the edge of the car, and rebounding, hit him in the chest, breaking his ribs. At the time of the accident he did not seem to be seriously hurt, but it was found later that a rib had pierced his lung, and he died Sunday night, July 13th.

Henry Karkkainen was known for a long time as Henry Johnson. He was 45 years old, married, and leaves a widow and three children.

Fatal Accident to John Rukonen.

At about 10:30 A.M., July 23d, John Rukonen, tramping from #13 stope on the sixth level in "B" shaft at the Cliffs Shaft Mine, was instantly killed by a fall of ground. While he was shovelling beside his car, a slab of ore weighing about a ton fell out of the side of the pillar beside him, and sliding down the pile, crushed him against the car. This side of the pillar had been barred the night before, but no one noticed this loose piece, which was held in place and partly buried by the broken ore of the pile. The removal of some of the pile released the slab, and allowed it to fall. The pile was about 12 feet high at this point.

Rukonen was a Finn, 28 years old, and had been tramping for us for nearly 6 years. He was a particularly good man. He was married, and is survived by a wife and one small child.

Repairs to "B" Shaft.

The timber between the tenth and fifteenth levels in "B" shaft was repaired on Sundays from the first of the year until April.

"B" Shaft was shut down for repairs from July 28th to August 14th. During this time the shaft was retimbered from surface to a depth of 40 feet, which is below water-level. The loss of product amounted to 5,000 tons.

Power.

There was a shortage of electric power early in March and in October and December. During the first two periods both the pumps and compressor were run by steam. In December the compressor only was run by steam.

New Construction.

Increase in Stock-Pile Capacity.

The gardens north of the mine-water ditch were taken over, graded and partly covered with plank to make room for stocking crushed ore. The track south of the stock-pile was covered.

To make room for the lump ore additional floor space was graded and covered with plank. Two trestles were built up-grade from the pocket and a hoisting engine installed beyond the end of the pile. Owing to delay in delivery of this hoist and of plank the new plant was not ready for operation until the end of the year.

During the summer months the available room east of the crushed stock-pile was entirely filled, and ore was not dumped south of the track until the middle of October.

E and A. 370.

Two electrically driven Class PRE-2 air-compressors, made by the Ingersoll-Rand Co., were purchased early in the year, and installed in the engine-house in the places occupied by the Model 1884 Rand Compressor and the 150 H.P. Steam-Turbine, which were both taken out. The old compressor was sold for scrap, and the turbine was stored in the yard.

The cost of installation of these compressors exceeded the estimate of the Mechanical Department, because of the complicated old foundations that had to be torn out.

The cost of installation was as follows:-

	<u>Estimate</u>	<u>Total Cost</u>
(1) Two Compressors and Motors,	\$ 30,000.00	\$ 30,057.40
(2) Freight	1,000.00	751.18
(3) Installing	<u>3,200.00</u>	<u>7,355.63</u>
Total	34,200.00	38,164.21
Contingencies	<u>420.00</u>	
Grand Total	\$ 34,620.00	\$ 38,164.21

E and A. 379. New Concrete Shaft-Houses.

As both "A" and "B" shaft-houses were very rotten, it was necessary to put up new structures. Either steel or wooden structures would have necessitated shutting down each shaft for about six weeks, and the cost of steel was very high. Two concrete shaft-houses were accordingly built, entirely enclosing the old structures. There was no interruption in hoisting on account of the new construction. The old shaft-houses have not been torn down yet, as the head-sheaves will not be moved to the new beams until January. Work was started in July and the last concrete was poured in December.

The T. L. Condron Company and Mr. George W. Maher were employed as consulting engineers and architect.

The cost of construction is shown in the following table.

	Estimate	Total To Date	Unexpended Balance
(1) 1,866 Cu. Yds. Concrete, Including Forms	\$ 37,320.00	\$ 37,705.04	\$ -385.04
(2) Tearing Down Old Shaft-Houses	2,500.00	647.98	1,852.02
(3) Moving Sheaves and Building Floors, Stairways, Windows and Doors	2,500.00	1,296.72	1,203.28
(4) Tie Rods and Reinforcing	1,600.00	8,291.96	-6,691.96
(5) Moving Tracks and Lengthening Chutes	300.00	628.35	-328.35
(6) Lighting and Heating	300.00	375.44	-75.44
(7) Local Office and Supervision	1,000.00	1,349.68	-349.68
(8) Consulting Engineers, Fees and Expenses, and Travelling Expenses	2,500.00	1,842.50	657.50
Total	48,020.00	52,137.67	-4,117.67
10% for Contingencies	<u>4,800.00</u>		<u>4,800.00</u>
Grand Total	\$ 52,820.00	\$ 52,137.67	\$ 682.33

The cost of reinforcing steel exceeded the estimate on account of an error in the bar-list furnished by the consulting engineers. The salvage value of the forms will more than pay for the labor of taking them down.

All charges for new construction were charged out as incurred.

Repairs to Buildings.

The coal-dock was repaired, and a new roof was put on the shed between the coal-dock and the boiler-house.

A concrete floor was laid in the machine-shop.

Exploration.

Underground Diamond Drilling.

Nineteen holes were drilled underground during the year, but no large amounts of ore were found. A description of this work will be given in the Geologist's report. The following table sets forth the principal facts:-

Underground Diamond-Drill Holes.

Hole No.	Depth Feet	Ore Feet	Shaft	Level	Direction	Inclination Degrees	Vein

Pumping Out No. 3 Mine.

The shaft behind the general barn at the Hard Ore was retimbered down to water-level and cleaned out, and on August 28th pumping was started using a 1,000 gal. centrifugal electric sinking-pump, obtained from the Austin Mine. This pump discharges through a 6-inch pipe into the Saw Mill Pit, from which the water drains into the city sewer. The water was 35 feet below the collar of the shaft when pumping started, and has been lowered $164\frac{1}{2}$ feet, standing at the first level at the end of the year.

Two 300-gal. sinking pumps have been obtained from the Gardiner-Mackinaw Mine to be used on the inclined skip-road below the knuckle at the shaft. A 300-gal. centrifugal pump has also been borrowed from the McClure Power Plant.

UNDERGROUND.

General Development.

Developments underground have continued to be encouraging. Work has not been resumed in the stopes, which were stopped last year, at the east end of the Main Vein in "A" shaft, on account of the dangerous proximity of stopes filled with water in the Incline Mine. Connection will be made as soon as possible after No. 3 Mine and the Incline have been pumped out. The South-East Deposit has shown unexpected width on the ninth level, and on the eighth level the raise started last year reached the elevation of the fifth level, and another raise, 200 feet further west, has been put up to the elevation of the sixth level. This ore has been reached by a drift on the fifth level. The east end of the North Vein on the sixth, seventh, eighth and ninth levels has shown up new ore during the year. Good ore has been opened up on the eleventh and twelfth levels.

In "B" shaft the ore below the tenth level has shown up well, but little new ore has been found on the upper levels. One new level, the fourteenth, has been opened up, and a larger number of contracts have been working on the lower levels than last year.

The following tables show a classification of the contracts by occupation, and a comparison between 1918 and 1919, the figures being averages for the year.

Classification of Contracts.

Kind of Work	"A" Shaft	"B" Shaft	Total
Stoping	13	11	24
Floors	9	8	17
Backs	3	2	5
Ore Raises and Drifts	5	2	7
Rock	<u>4</u>	<u>3</u>	<u>7</u>
Total	34	26	60

Comparison Between 1918 and 1919.

	"A" Shaft		"B" Shaft		Total	
	1918	1919	1918	1919	1918	1919
Developing New Ore	14	15	11	11	25	26
Mining Known Reserves	18	15	15	12	33	27
Rock	<u>3</u>	<u>4</u>	<u>1</u>	<u>3</u>	<u>4</u>	<u>7</u>
Total	35	34	27	26	62	60

There were two less contracts than in 1918, and the number of contracts developing new ore has increased one and the number depleting known reserves has decreased six.

Description of Work Done.

"A" Shaft.

There was no ore mined on the first level. On the second level two contracts have been mining the floor of a sub-level below the first level at the east end of the Main Vein throughout the year. There is a little ore left here. Another contract mined the floor of one of the old stopes on the first level, 200 feet north-east of "B" shaft, and are now stoping to the north under

the jasper, which was the foot-wall on the first level. Another gang is mining the floor of an old stope in the North Deposit, 500 feet north-east of "B" shaft, working from a raise put up from the fourth level.

On the fourth level one gang is finishing the floor left under the drift 300 feet north-east of the shaft. This is the only available ore left in the vein referred to as the "Small Body" in the old reports. In the North Deposit, 700 feet north-west of "A" shaft, one contract stoped west to the end of the ore, and another raised to the first level, and is now mining the floor of the second level.

On the fifth level one gang has stoped west in the North Deposit, following a vein of ore about 20 feet wide. They are now 700 feet north-west of "A" shaft. Another gang drifted west 40 feet in rock and are raising to the fourth level 80 feet further north. In the South Lens the ore on the south side of the anticline was followed west to the end, and raises were put up to mine the floor of the fourth level. One contract is working here, 580 feet south-east of "A" shaft. A long rock-drift has been driven 580 feet from the South Lens to the South-East Deposit, and one contract is drifting in the ore now. One contract has been mining the floor of the east lens of the Main Vein, from 800 feet to 1,000 feet east of "A" shaft, and another has mined the floor of the North Deposit near the boundary, 700 feet north-east of "A" shaft. Both gangs worked in these places throughout the year.

On the sixth level one contract followed the ore west on the south side of the anticline in the South Lens, 650 feet south-east of the shaft, to the end, and then cross-cut south to the south boundary line in rock. They cut out for the diamond-drill at the south end of the long cross-cut, raised on the foot-wall to the fifth level, and then moved to the seventh level. In the North Deposit one contract mined floors during the first half of the year, 1200 feet north-east of the shaft, and two contracts have been stoping in new ore at the east end of the vein. This is the ore found by Diamond-Drill Holes 287 and 294.

On the seventh level most of the floors and backs along the south side of the South Lens, and part of the back over the north stope in the Main Vein from 800 to 1200 feet east of the shaft, have been mined during the year. One gang is mining the back 1200 feet east of the shaft at the end of the year. In the North Deposit a rock drift is being driven north-west to the North Deposit 1200 feet east of the shaft, and one gang is stoping and another raising 1800 and 1950 feet east of the shaft. These two gangs are opening up new territory.

On the eighth level in the South Lens one contract has mined the backs and the floor of the seventh level in the west stopes, and two other contracts have mined the floors of the stopes further east. In the South-East Deposit the raise started last year, 1360 feet south-east of the shaft, was put up to the fifth level in ore, and another raise was put up in ore from a new stope, 200 feet farther west, to the sixth level. The size of the ore has not been determined. A rock-raise was also put up from the tenth level to this ore close to the base of the first raise. In the North Deposit one gang is mining floors 1500 feet east of "A" shaft, and another is raising at the east end of the vein, 450 feet further east. Another gang has raised in rock to the seventh level, 1800 feet east of the shaft, in the hanging-wall of the Main Vein.

On the ninth level two contracts have mined backs in the Main Vein from 1000 to 1500 feet east of the shaft, and another contract has mined the floor of the eighth level and put up two raises from 1950 to 2000 feet east of the shaft. Another contract cross-cut 175 feet north in rock to the North Deposit, and is now stoping east and west 1900 feet east of the shaft. In the South-East Deposit one contract has stoped throughout the year 1400 to 1500 feet south-east of the shaft, and another gang drifted south-west 200 feet in rock from the end of the long south cross-cut to the top of a raise put up in ore from the tenth level, 1850 feet south-east of the shaft. The ore here is small.

On the tenth level one contract has been stoping in the South-East Deposit throughout the year 1850 to 1900 feet south-east of the shaft.

One gang has been stoping on the eleventh level, and another on the twelfth level 1200 feet east of the shaft in the Main Vein.

"B" Shaft.

On the 1200 foot sub-level, 100 feet above the first level in the Main Vein, one contract has mined backs throughout the year 500 to 550 feet south of "B" shaft, and another has mined floors further east. This contract is now drifting east in mixed ore on the 1167 foot sub-level. Another contract followed the ore east on the foot-wall 600 feet south of the shaft to Diamond-Drill Hole No. 9, and opened a stope here. They have also cross-cut south on Drill-Hole No. 284, but have found no ore large enough to mine. In the South Lens another gang is mining the floor of the 1200 foot sub-level. At the east end of the Main Vein, 700 feet south-east of "B" shaft, one gang has followed the ore down to the elevation of the second level and made connection with workings from "A" shaft.

On the third level one contract stoped for a few months 300 feet north of "B" shaft and then mined floors 300 feet south-east of "B" shaft for two months. There was no work on the fourth level.

On the fifth level the available ore in the floor 800 feet and further west of the shaft has been finished, and nearly all the floors in the North Deposit have been mined. One gang is still mining floors here, and another has been stoping throughout the year 600 to 700 feet north-west of the shaft.

On the sixth level in the North Deposit the floors in the west end and in the middle of the deposit were mined during the year and one gang is still working here. Part of the floors in the Fault Vein and in the Main Vein 1000 to 1200 feet west of the shaft have also been mined and two gangs are now working here.

On the seventh level in the North Deposit most of the floors in the east end have been mined, and two contracts are now raising here to take down the floor of the sixth level. One gang is also mining floors in the Main Vein 900 feet west of the shaft. They have been working here about six months.

CLIFFS SHAFT MINE.

On the eighth level one contract has mined the ore in the back of the Main Vein for 200 feet east from the west end. They have worked only part of the time.

On the ninth level one contract has followed the Main Vein west throughout the year, and are now 1460 feet west of the shaft. The ore is very irregular and not large.

On the tenth level two contracts worked in the Main Vein most of the year. One was mining the ore in the back 700 to 900 feet west of the shaft, and the other was stoping 1300 feet west of the shaft. Both gangs are now on the lower levels. Another contract has been stoping and mining the back in the Fault Vein from 900 to 1050 feet west of the shaft.

On the eleventh level the limits of the ore on the north side of the syncline were reached in the first half year, and some of the floor near the west end has been mined. On the south side one contract has followed the foot-wall west throughout the year, and are now 1450 feet west of the shaft.

The twelfth level has opened up well on the south side, where one contract has been stoping west throughout the year. The north side has been disappointing, as the ore-formation is lean near the hanging-wall. One contract is drifting and another raising on this side.

Work on the thirteenth level has been facilitated by some new raises, which were put up from the fifteenth to the fourteenth, from the fourteenth to the thirteenth, and thence to the twelfth level. Two gangs have been stoping all the year and another during the last six months, and one gang has been drifting west in ore and rock during the last half year. They are now nearly 1800 feet west of the shaft. The outline of the ore on the level is irregular, but as developed has a maximum length of 430 feet and a maximum width of 280 feet. It is about 30 feet high.

The fourteenth level is small, but connects with three raises from the fifteenth level. One stope 100 feet long was opened during the year. One contract is now drifting west in jasper 1480 feet west of the shaft.

The only work done on the fifteenth level is a raise, put up from the west end of the main drift to the fourteenth level.

CLIFFS SHAFT MINE.

COMPARISON OF COST SHEETS FOR 1918 AND 1919.

The Cliffs Shaft Mine worked on single shift in 1918 and 1919, but hoisting was done on both shifts. There was a loss of product of 5,000 tons in August 1919, while "B" shaft was being repaired.

Wages were advanced 10% on April 16th, August 1st and October 1st, 1918, the last scale being maintained in 1919. The average wages in 1919 were therefore 18.4% higher than in 1918.

In 1919 two new air-compressors were installed, two new concrete shaft-houses were built, "B" shaft was retimbered down to water-level, and additional room was graded, plank laid, two trestles built and a haulage plant erected to make room for the winter's production. In addition No. 3 Mine was unwatered down to the first level, a shaft-house was built, and the shaft was retimbered down to water-level. All this construction-work, amounting to \$ 117,252.60, was charged out against the ore in 1919. Furthermore, owing to small sales it was necessary to stock crushed ore all summer long, and stocking lump ore in the fall was unusually expensive and slow, before the new trestles were ready, causing a loss of product. As a result costs were considerably higher in 1919 than in 1918. The following tabulation shows the costs of the different items.

(1) New Compressors, E and A. 370.,	\$ 38,164.21
(2) New Shaft-Houses, E and A. 379.,	52,137.67
(3) Repairing "B" Shaft,	1,318.39
(4) Pumping Out No. 3 Mine,	13,346.65
(5) New Trestle, Stock-Pile Floor, and Haulage,	<u>12,285.68</u>
Total	\$ 117,252.60
(6) Cost of Stocking Ore All Summer,	<u>6,795.61</u>
Total	\$ 124,048.21

By deducting the \$ 124,048.21 enumerated above from the total cost for 1919 and using the amount thus obtained, the cost per ton for 1919 would be \$ 2.130. We must make a further correction of 18.4% of the labor cost for 1918, or \$.238, and, deducting this \$.238, we get a cost of \$ 1.892 per ton for 1919 to compare with \$ 1.852 for 1918. However, the rock-drifting done in 1919 cost \$.068 more than in 1918, making a real net decrease of \$.028 in 1919.

Production.

	Total Tons	Per Day Tons
Year 1918	373,734	1,254
Year 1919	<u>366,773</u>	<u>1,231</u>
Decrease	6,961	23

Labor.

	Year 1918	Year 1919
Average number of men	336	361
Average rate per day	4.88	5.66

Tons per Man per Day.

	Year 1918	Year 1919
Surface	15.54	11.13
Underground	<u>4.93</u>	<u>4.90</u>
Total	3.74	3.40

Cost of Production.

	Year 1918	Year 1919
Labor	\$ 1.291	\$ 1.663
Supplies	<u>.561</u>	<u>.806</u>
Total	\$ 1.852	\$ 2.469

GENERAL EXPENSE.

No. 26 - Insurance.

1918	\$	1163.62	\$.003
1919		<u>1452.33</u>		<u>.004</u>
Increase	\$	288.71	\$.001

The increase is entirely in riot insurance premium.

No. 27 - Engineering.

1918	\$	1908.37	\$.005
1919		<u>2470.81</u>		<u>.007</u>
Increase	\$	562.44	\$.002

This is a Central Office charge. The increase is partly due to higher wages, and partly to more surveying in connection with new construction and development.

No. 28 - Analysis.

1918	\$	2387.27	\$.006
1919		<u>2453.07</u>		<u>.007</u>
Increase	\$	65.80	\$.001

No. 30 - Personal Injury Expense.

1918	\$	10378.08	\$.028
1919		<u>18108.05</u>		<u>.049</u>
Increase	\$	7729.97	\$.021

There were two fatal accidents in 1919 and one in 1918. Charges for the two years were as follows:-

	1918	1919
Medical & Hospital Exp.	\$ 1696.29	\$ 2004.23
Mutual Settlement	100.00	125.00
Compensation Charges	6822.42	9561.08
1/2 Day Funeral Expense	575.91	1691.15
Hospital Deficit	<u>1183.46</u>	<u>4726.59</u>
Total	\$ 10378.08	\$ 18108.05

No. 30a - Mine Office.

1918	\$	11833.36	\$.032
1919		<u>15542.36</u>		<u>.042</u>
Increase	\$	3709.00	\$.010

The increase is due to one extra clerk, \$ 1020.00. Increase in wages and Central Office charges.

MAINTENANCE.

No. 125 - Tracks and Yards.

1918	\$	2743.19	\$.007
1919		<u>2546.17</u>		<u>.007</u>
Decrease	\$	197.02	\$.000

The decrease is in cost of maintenance of office grounds, etc., which cost \$ 2027.97 in 1918.

No. 126 - Docks, Trestles and Pockets.

1918	\$	1345.72	\$.004
1919		<u>6828.81</u>		<u>.019</u>
Increase	\$	5483.09	\$.015

The increase is in cost of solar plank, grading and laying, which cost \$ 7878.42 in 1919.

No. 127 - Buildings.

1918	\$	4124.69	\$.011
1919		<u>54419.24</u>		<u>.148</u>
Increase	\$	50294.55	\$.137

The increase is in E and A. 379---New concrete shaft-houses, which cost \$ 52,137.67 in 1919.

MAINTENANCE. (Continued)

No. 128 - Shop Machinery.

1918	\$	2865.01	\$.008
1919		<u>228.57</u>		<u>.001</u>
Decrease	\$	2636.44	\$.007

In 1918 a new drill-sharpener cost \$ 1,389.83, a pedestal grinder cost \$ 150, and \$ 825.85 was transferred from E and A. 318 to this account.

No. 129 - Boiler Plant.

1918	\$	5936.46	\$.016
1919		<u>2572.72</u>		<u>.007</u>
Decrease	\$	3363.74	\$.009

In 1918 the principal item was E and A. 352, covering a new coal-crusher and elevator, which cost \$ 3,565.78.

No. 130 - Hoisting Machinery.

1918	\$	14142.55	\$.038
1919		<u>10866.09</u>		<u>.030</u>
Decrease	\$	3276.46	\$.008

In 1918 the principal items were 12" counter-weight pipe, \$ 8,003.16 and counter-weights, \$ 1,052.82. In 1919 two new ropes were put on, 450 feet of 12" pipe were charged out, a new bell system was installed and a new rotor was bought for "B" shaft hoist.

No. 131 - Compressors and Power Drills.

1918	\$	1008.92	\$.003
1919		<u>41681.61</u>		<u>.114</u>
Increase	\$	40672.69	\$.111

In 1919 the principal item was E and A. 370, covering two new electric air-compressors, which cost \$ 38,164.21, and three new drills cost \$ 990, circulation pump and motor cost \$ 990, 6" pipe \$ 387, and 4" pipe \$ 114.

No. 132 - Pumping Machinery.

1918	\$	1612.39	\$.004
1919		<u>10252.42</u>		<u>.028</u>
Increase	\$	8640.03	\$.024

The principal items in 1919 were maintenance and installation charges for pumping out No. 3 shaft, amounting to \$ 5,912.53, 2 pump cables \$ 2,327, and an oil circuit breaker \$ 298.

No. 133 - Top Tram Engines and Cars.

1918	\$	2992.52	\$.008
1919		<u>2447.51</u>		<u>.007</u>
Decrease	\$	545.01	\$.001

In 1918 Hard Ore Shop charges were \$ 600 for a new car.

No. 134 - Skips and Skip-Roads.

1918	\$	2915.78	\$.008
1919		<u>2713.31</u>		<u>.007</u>
Decrease	\$	202.47	\$.001

Charges for both years are a little high on account of repairs to skip-roads. This was particularly true in 1918.

No. 135 - Underground Tracks and Cars.

1918	\$	11061.96	\$.030
1919		<u>14727.13</u>		<u>.040</u>
Increase	\$	3665.17	\$.010

The increase is in labor on tracks and maintenance of cars, rail being nearly the same for both years.

No. 136 - Electric Tram Plant.

1918	\$	6868.42	\$.018
1919		<u>6028.76</u>		<u>.016</u>
Decrease	\$	839.66	\$.002

In 1918 a cable cost \$ 1,545.

MAINTENANCE. (Continued)

No. 137 - Telephones and Safety Devices.

1918	\$	2315.56	\$.006
1919		<u>4574.74</u>		<u>.012</u>
Increase	\$	2259.18	\$.006

The increase is mostly due to the new cable and connections for telephones, lights, etc., for which the principal supply items slightly exceeded \$ 2,000.

No. 138 - Crushing and Screening.

1918	\$	4575.32	\$.012
1919		<u>3010.00</u>		<u>.008</u>
Decrease	\$	1565.32	\$.004

In 1918 sectional plates cost \$ 580 and chute plates \$ 200. The principal charges in 1919 have been for plates in the chutes. The main shaft of the big crusher broke in June.

Underground Shovel and Gas Car.

1918	\$	497.98	\$.001
1919		<u>1020.81</u>		<u>.003</u>
Increase	\$	522.83	\$.002

A second gas locomotive was put in use late in 1918, and on this locomotive the repairs have been high. The shovel was not operated during the second half of 1919, but it was thoroughly overhauled and extensive repairs made.

MINING EXPENSE.

No. 150 - Air-Pipes.

1918	\$	5789.63	\$.015
1919		<u>5376.44</u>		<u>.015</u>
Decrease	\$	413.19	\$.000

The decrease is in amount of pipe used.

No. 151 - Compressors.

1918	\$	33945.78	\$.091
1919		<u>38376.68</u>		<u>.105</u>
Increase	\$	4430.90	\$.014

In 1919 most of the air was made by electricity, with consequently greater cost to the mine.

No. 152 - Hoisting.

1918	\$	19491.47	\$.052
1919		<u>20189.09</u>		<u>.055</u>
Increase	\$	697.62	\$.003

The increase is due to higher wages in 1919.

No. 153 - Pumping.

1918	\$	22399.12	\$.060
1919		<u>22814.96</u>		<u>.062</u>
Increase	\$	415.84	\$.002

The increase is due to higher wages and more power used.

No. 154 - Sinking and Shaft Repairs.

1918	\$	4411.66	\$.012
1919		<u>5331.59</u>		<u>.015</u>
Increase	\$	919.93	\$.003

The increase is due to repairing "B" shaft.

No. 155 - Rock Drifting.

1918	\$	41147.91	\$.110
1919		<u>65439.35</u>		<u>.178</u>
Increase	\$	24291.44	\$.068

There was 2,217 feet of drifting in 1918 and 3,362 feet in 1919.

MINING EXPENSE. (Continued)

No. 156 - Breaking Ore.

1918	\$ 234384.40	\$.627
1919	<u>234774.65</u>	<u>.640</u>
Increase	\$ 390.25	\$.013

The increase in cost per ton is due to average higher wages and to a smaller proportion of contracts mining floors and backs in 1919.

No. 157 - Trimming.

1918	\$ 172715.04	\$.462
1919	<u>204336.01</u>	<u>.557</u>
Increase	\$ 31620.97	\$.095

The increase is due to 18.4% higher wages in 1919.

No. 158 - Filling.

1918	\$ 5704.27	\$.015
1919	<u>6257.73</u>	<u>.017</u>
Increase	\$ 553.46	\$.002

There was much more rock handled in 1919.

No. 159 - Timbering.

1918	\$ 4663.46	\$.012
1919	<u>4382.18</u>	<u>.012</u>
Decrease	\$ 281.28	\$.000

In 1919 some of the timbermens' time was charged to repairing "B" shaft.

ANNUAL REPORT

OF THE

SALISBURY MINE

(1919)

Production and Shipments.

The Salisbury Mine worked 298 days in 1919, and produced 107,148 tons of ore of all grades, an average of 359 tons per day. More than three times as much work was done in rock in 1919 as in 1918, but no new ore was found, and operations were confined mostly to stoping. 8,626 tons of rock were hoisted, an average of 29 tons per day.

Most of the Clinton and Silica stock-piles were shipped.

Table I.

Production by Grades.

Grade	Total for Year		Average per Day	
	1919 Tons	1918 Tons	1919 Tons	1918 Tons

Factors Used:- Bessemer and Clinton, 10 cu. ft. per ton.

Clinton Silica, 13-15 cu. ft. per ton.

SURFACE.

There was no new construction work carried on during the year, and nearly all work on surface was in the regular routine.

The Clinton stock-pile was nearly all shipped, and a large tonnage was shipped from the Clinton Silica pile, but no shipments were made from the Bessemer pile, which is very small.

The ditch carrying the overflow from Lake Sally around the South-East Deposit was thoroughly cleaned out.

UNDERGROUND.

There were no new discoveries of ore during the year, and operations were confined to stoping, except for some rock-drifting on the ninth level in the old mine and on the fourteenth and fifteenth levels in the South-East Deposit.

On the fifth level two contracts were stoping in the North Vein in December. One had worked in No. 2 shaft pillar throughout the year, and the other has been stoping 1,000 feet south-east of the shaft for three months.

On the eighth level all the ore in the Bessemer Deposit and most of that near the east end of the Foot-Wall Deposit, and all the ore remaining above the level in the South Vein has been mined. There are four gangs working on the eighth level.

Two gangs are scrambling on the north side of the South Vein on the 1100 foot sub-level and another is scrambling near the south foot-wall on the 1000 foot sub-level at the east end of the vein. The first two gangs have worked here the whole year, and the third one for about six months.

On the 1045 foot sub-level, or ninth level, a cross-cut was driven north 135 feet in diorite through the foot-wall of the South Vein to the North Vein, and a drift was then driven east in the North Vein for 200 feet in diorite. From the end of this drift a raise is being put up to mine the ore in the floor of the eighth level in the Bessemer Deposit.

Both the eighth and twelfth levels in the old mine were retimbered.

In the South-East Deposit the ore left above the eleventh level and all the ore down to within 20 feet of the twelfth level has been mined. A new sub-level at 940 feet, 10 feet above the twelfth level, is being opened. Seven gangs are working in this deposit. On the fourteenth level 60 feet of rock-drifting was done to facilitate the handling of loaded cars, and the south cross-cut was extended 75 feet in rock to explore the formation.

The winze called No. 8 shaft below the fourteenth level in the South-East Deposit was continued in rock 62 feet to the fifteenth level, and the fifteenth level opened. This level was opened for a length of 270 feet in rock, and two cross-cuts 70 feet long were driven to the south, and one 50 feet long to the north-east. This last one cut a vein of ore seven feet wide, which was followed east for 70 feet. A little other ore was found in the back, but did not extend down to the floor of the level.

There were seventeen contracts working throughout the year, of which ten were in the old mine and seven in the South-East Deposit.

SALISBURY MINE.

COMPARISON OF COST SHEETS FOR 1918 AND 1919.

The Salisbury Mine worked on double shift throughout both 1918 and 1919, and there was little change in the method of mining. There was much more rock-work done in 1919.

Wages were increased 10% successively on April 16th, August 1st, and October 1st, 1918, and the last rate was maintained without change in 1919, making 1919 wages 18.4% higher than the average for 1918.

Production.

	Total	Per Day
Year 1918	114,339 Tons	363 Tons
Year 1919	<u>107,148</u> "	<u>361</u> "
Decrease	7,191 "	22 "

Labor.

	1918	1919
Average number of men	124	127
Average rate per day	\$ 4.82	\$ 5.56

Tons per Man per Day.

	1918	1919
Surface	12.19	12.02
Underground	3.95	3.69
Total	2.98	2.82

Cost of Production.

	1918	1919
Labor	\$ 1.560	\$ 1.976
Supplies	<u>.574</u>	<u>.618</u>
Total	\$ 2.134	\$ 2.594

Deducting 18.4% of the 1918 labor cost from the 1919 labor cost, gives \$ 1.689 to compare with \$ 1.560, an increase of \$.129 in labor. The supply increase is \$.044, making a total of \$.173. Rock-drifting increased \$.119 and shaft repairs \$.013, leaving a net increase of \$.041 in the other accounts.

GENERAL EXPENSE.

No. 26 - Insurance.

1918	\$ 419.12	\$.003
1919	<u>591.92</u>	<u>.006</u>
Increase	\$ 172.80	\$.003

Riot insurance increased \$ 184 in 1919.

No. 27 - Engineering.

1918	\$ 796.94	\$.007
1919	<u>1063.83</u>	<u>.010</u>
Increase	\$ 266.89	\$.003

The increase is due to opening the fifteenth level in No. 8 shaft and to drifting on the ninth level. This is a Central Office charge.

No. 28 - Analysis.

1918	\$ 4328.25	\$.038
1919	<u>4816.63</u>	<u>.045</u>
Increase	\$ 488.38	\$.007

The increase is due to higher costs at Central Laboratory.

No. 30 - Personal Injury Expense.

1918	\$ 7288.82	\$.064
1919	<u>3360.16</u>	<u>.031</u>
Decrease	\$ 3928.66	\$.033

This is a Central Office charge. In 1918 there were two fatal accidents and none in 1919. Items of expense in 1918 and 1919 were as follows:-

	<u>1918</u>	<u>1919</u>
Medical & Hospital Exp.	\$ 607.41	\$ 671.20
Compensation Charges	6233.34	554.35
½ Day Wages for Funeral		411.88
Hospital Deficit	<u>448.07</u>	<u>1722.73</u>
Total	\$ 7288.82	\$ 3360.16

No. 30a - Mine Office.

1918	\$ 6631.02	\$.058
1919	<u>7611.80</u>	<u>.071</u>
Increase	\$ 980.78	\$.013

Wages increased \$ 860, office equipment and maintenance \$ 75, exchange \$ 25 and first aid \$ 20.

MAINTENANCE.

No. 125 - Tracks and Yards.

1918	\$	926.23	\$.008
1919		<u>1912.45</u>	<u>.018</u>
Increase	\$	986.22	\$.010

Cleaning out the ditch below Lake Sally in 1919 caused the increase. This was not done in 1918, and the ditch was in bad shape.

No. 126 - Docks, Trestles and Pockets.

1918	\$	426.93	\$.004
1919		<u>213.09</u>	<u>.002</u>
Decrease	\$	213.84	\$.002

In 1918 the skip wrecked the pocket, and these repairs caused the higher cost in that year.

No. 127 - Buildings.

1918	\$	898.11	\$.008
1919		<u>243.69</u>	<u>.002</u>
Decrease	\$	654.42	\$.006

In 1918 a sample-house cost \$ 56, coal-dock repairs \$ 46, office repairs \$ 63 and interior repairs to engine-house \$ 470.

No. 128 - Shop Machinery.

1918	\$	98.69	\$.001
1919			
Decrease	\$	<u>98.69</u>	<u>\$.001</u>

1918 charges were for general boiler repairs.

No. 129 - Boiler Plant.

1918	\$	122.27	\$.001
1919		<u>.21</u>	<u>.000</u>
Decrease	\$	122.06	\$.001

Depreciation charges decreased \$ 2103.49 in 1919. The increase is due to new motor for the hoist.

No. 130 - Hoisting Machinery.

1918	\$	4516.46	\$.039
1919		<u>2908.15</u>	<u>.027</u>
Decrease	\$	1608.31	\$.012

No. 131 - Compressors and Power Drills.

1918	\$	1338.12	\$.012
1919		<u>1369.22</u>	<u>.013</u>
Increase	\$	31.10	\$.001

Depreciation decreased \$ 2628.56 in 1919. The principal charges in 1919 were for repairs to the centrifugal pump and to the water-column.

No. 132 - Pumping Machinery.

1918	\$	3441.18	\$.030
1919		<u>2148.32</u>	<u>.020</u>
Decrease	\$	1292.86	\$.010

1919 charges were mostly for repairs to top tram engine and wheels and axles for cars.

No. 133 - Top Tram Engines and Cars.

1918	\$	306.86	\$.003
1919		<u>465.80</u>	<u>.004</u>
Increase	\$	158.94	\$.001

No. 134 - Skips and Skip-Roads.

1918	\$	2265.27	\$.020
1919		<u>1709.21</u>	<u>.016</u>
Decrease	\$	556.06	\$.004

There were practically no repairs to the cage in 1919, which in 1918 cost \$ 180. Repairs to skips cost \$ 523 in 1918. There was a decrease in these repairs and in repairs to the skip-road in 1919.

MAINTENANCE. (Continued)

No. 135 - Underground Tracks and Cars.

1918	\$	3106.85	\$.027
1919		<u>3945.39</u>		<u>.037</u>
Increase	\$	838.54	\$.010

In 1919 an extra man was put on cleaning tracks and ditches.

No. 137 - Telephones and Safety Devices.

1918	\$	337.99	\$.003
1919		<u>441.29</u>		<u>.004</u>
Increase	\$	103.30	\$.001

Lighting shafts and levels cost \$ 80 more in 1919 and First Aid work \$ 30 more.

MINING EXPENSE.

No. 150 - Air-Pipes.

1918	\$	906.08	\$.008
1919		<u>996.56</u>		<u>.009</u>
Increase	\$	90.48	\$.001

No. 151 - Compressors.

1918	\$	6724.64	\$.059
1919		<u>8646.00</u>		<u>.081</u>
Increase	\$	1921.36	\$.022

The increase is due to higher wages and more current used.

No. 152 - Hoisting.

1918	\$	11100.25	\$.097
1919		<u>12274.05</u>		<u>.115</u>
Increase	\$	1173.80	\$.018

The increase is mostly due to 18.4% higher wages.

No. 153 - Pumping.

1918	\$	6709.24	\$.059
1919		<u>10838.82</u>		<u>.101</u>
Increase	\$	4129.58	\$.042

The increase is due to higher wages and to more pumping due to heavy run-off in spring of 1919. A rearrangement of pumping-hours also added to the labor cost.

No. 154 - Sinking and Shaft Repairs.

1918	\$	2462.87	\$.021
1919		<u>3626.94</u>		<u>.034</u>
Increase	\$	1164.07	\$.013

Charges for both years are mostly for repairs to the knuckle.

No. 155 - Rock Drifting.

1918	\$	1768.78	\$.015
1919		<u>14358.32</u>		<u>.134</u>
Increase	\$	12589.54	\$.119

Rock drifting increased from 218 feet in 1918 to 1,260 feet in 1919.

No. 156 - Breaking Ore.

1918	\$	97289.87	\$.851
1919		<u>102839.53</u>		<u>.960</u>
Increase	\$	5549.66	\$.109

The increase is due to higher wages.

MINING EXPENSE. (Continued)

No. 157 - Trimming.

1918	\$	27729.90	\$.242
1919		<u>30821.57</u>		<u>.288</u>
Increase	\$	3091.67	\$.046

The increase is due to higher wages.

No. 158 - Filling.

1918	\$		\$	
1919		<u>541.81</u>		<u>.005</u>
Increase	\$	541.81	\$.005

1919 charges are for filling an old room on the ninth level.

No. 159 - Timbering.

1918	\$	28780.24	\$.252
1919		<u>31829.63</u>		<u>.297</u>
Increase	\$	3049.39	\$.045

The increase is due to the higher rate of wages and higher cost of timber in 1919.

No. 160 - Captain and Bosses.

1918	\$	9235.91	\$.081
1919		<u>10988.77</u>		<u>.103</u>
Increase	\$	1752.86	\$.022

The increase is due to the higher rate of wages.

No. 161 - Dry-House.

1918	\$	3628.54	\$.032
1919		<u>4308.85</u>		<u>.040</u>
Increase	\$	680.31	\$.008

The increase is due to higher wages in 1919.

No. 162 - Top Landing and Trimming.

1918	\$	7938.25	\$.070
1919		<u>9980.29</u>		<u>.093</u>
Increase	\$	2042.04	\$.023

There was a decrease of 2,300 tons in pocket shipments in 1919.

No. 163 - Stocking Ore.

1918	\$	1161.01	\$.010
1919		<u>1991.66</u>		<u>.018</u>
Increase	\$	830.65	\$.008

Stocking trestles were taken down and put up again twice in 1919 on account of the dock-mens' strike in August.

No. 166 - Cave-In.

1918	\$	216.13	\$.002
1919		<u>230.40</u>		<u>.002</u>
Increase	\$	14.27	\$.000

No. 171 - Ventilation.

1918	\$	1022.67	\$.009
1919		<u>882.69</u>		<u>.008</u>
Decrease	\$	139.98	\$.001

There was less power used in 1919.

ANNUAL REPORT
OF THE
ANGELINE MINE

(1919)

Production and Shipments.

Shipments were made from the East End pit, the Happy Hollow Pit and from "D" Shaft in 1919. The East End Pit was operated during the winter months early in the year, the ore being stocked close to the pit. All ore in stock and all remaining in the pit was shipped during the first half of the season, work being completed at this pit in August.

The Happy Hollow Pit was cleaned out and the ore remaining in the bottom on the north side of the dike was mined in the winter and early spring, but in April the pit, raises and tunnel were filled with quicksand during heavy rains, and no further work was done until September. During the dry fall 1,812 tons were mined by contract, hauled by team to "D" Shaft, and dumped on the stocking floors. Nearly all the ore left on the south side of the dike and under the dam was mined in this way.

The track east of No. 56 timber raise, which is 1,000 feet east of "D" Shaft, was removed by the L. S. & I. Ry. All track now at the mine belongs to the Cleveland-Cliffs Iron Company.

Work at "D" Shaft was started in 1918 in No. 56 pillar, and was continued throughout 1919, production being gradually increased. Very little ore was hoisted from the seventh level.

The mine worked 298 days during the year, and produced 42,080 tons of all grades, an average of 141 tons per day.

Table I.

Factor used:- 10 cu. ft. per ton.

GENERAL.

Labor.

There was no change in the wage-scale during the year, the scale in effect Oct. 1st, 1918 being maintained.

There was no shortage of labor during the year. All men returning from the Army and Navy were given their old jobs upon application.

New Construction.

E and A. 361. Reopening the Mine.

The seventh level was reopened from "D" Shaft west to the boundary. 500 feet west of the shaft the ground was so loose that a new drift through the rock had to be driven. No ore has been found in this part of the mine.

Exploration.

Underground Diamond Drilling.

In November a hole was started south-east from the drift east of No. 56 timber-raise, and was driven 59 feet, but the ground caved so badly that the hole was abandoned.

Surface.

The houses on Angeline Street east of No. 56 timber-raise have been sold and moved away. The old dry was also torn down, and most of the material derived from it was sold to the Cliffs Shaft Mine.

The buildings at the East End and at Happy Hollow have all been removed, and the railroad track east of No. 56 raise has been taken up. The electric hoist that was at Happy Hollow has been erected at the shaft of No. 3 Mine behind the Hard Ore barn. The hoist that was at the East End has been sent to the Republic Mine.

East End Pit.

The East End Pit was operated continuously until August, the ore mined in the winter being dumped on the stock-pile. The last ore was cleaned up on August 23d, and all supplies and equipment were removed.

A pipe-line has been laid from the pit to the end of the 30 inch wood-stave pipe that carries the water from the Lake Angeline basin, and a pump will be installed during the winter to throw from the East End Pit to the big pipe. All the water draining from the east end of the mine will be diverted to the East End Pit, which will serve as a sump.

Happy Hollow Pit.

Ore was mined in the bottom of the Happy Hollow Pit from the beginning of the year until the workings were filled with quicksand in April. This ore was stocked in ore-cars.

In October work was resumed under contract, and 1,812 tons of ore were scrambled out and hauled to the stocking grounds at "D" Shaft.

UNDERGROUND.

No. 56 Pillar.

1,000 feet east of "D" Shaft is an old timber-raise called No. 56. Adjacent to this raise and west of it the P. & L. A. I. Co. left a pillar 120 feet wide north and south to support the track and road. Four sub-levels have been opened in this pillar and the outline of the ore has been determined on all sides but the south-west.

The lowest sub-level, at 1290 feet above sea-level is small, being only 100 feet long and 30 feet wide, but there is a strong probability that ore will be found to the south-west. This sub-level was opened from Raise 4A, which was put up in 1918 from the fourth level to the 1318 foot sub-level.

The 1318 foot sub-level shows the largest area of ore, and one contract is still developing new ore ^{to} the south-west. The ore-body has a maximum width north and south of 120 feet and a maximum length of 240 feet. The outline is irregular. Three raises, 2A, 2B and 2C, were put up from this sub-level to the 1350 foot sub-level, and Raises 2A and 2C have been continued to the 1375 foot sub-level. The ore on the 1350 foot sub-level has a maximum dimension north and south of 120 feet and east and west 240 feet. One contract is stoping at the south-west corner and two are drifting along the north side.

The 1375 foot sub-level shows a smaller area, the dimension north and south being 120 feet and the average east and west being about 70 feet. The upper limit of the ore is also irregular. There are four gangs working on this sub-level mining the ore up to the capping. The maximum height above the level thus far has been about 30 feet.

"D" Shaft.

The main drift west of "D" Shaft has been reopened, except at a point 500 feet west of the shaft, where it was necessary to drift around the caved ground. The cross-cut south to the old sub-shaft, 600 feet west of "D" Shaft, has been partly reopened, and an effort is being made to reopen the sub-level 50 feet above the seventh level close to the west boundary. Only two gangs are working on this level.

ANGELINE MINE.

COMPARISON OF COST SHEETS FOR 1918 AND 1919.

The Angeline Mine worked in "D" shaft on double shift during all of 1919. In the first half of the year the East End Pit was operated, and in the early spring and in the fall a small product was obtained from the Happy Hollow Pit. In 1918 most of the ore came from the East End with a small tonnage from Happy Hollow. "D" shaft produced only 1,888 tons.

Wages were unchanged in 1919, but in 1918 there were successive 10% increases on April 16th, August 1st, and October 1st, making the average wages in 1919 18.4% higher than in 1918. This factor, as well as the reduction in tonnage produced from open pits and the increase in ore from underground, contributed largely to the increase in cost per ton in 1919.

Production.

	Total Tons	Per Day Tons
Year 1918	57,439	357
Year 1919	<u>42,080</u>	<u>141</u>
Decrease	15,359	218

Labor.

	1918	1919
Average number of men	40	66
Average rate per day	\$ 4.80	\$ 5.23

Tons per Man per Day.

	1918	1919

Increase	\$ 2437.93	\$.069

MAINTENANCE.

No. 125 - Tracks and Yards.

1918	\$ 1710.50	\$.030
1919	<u>1718.87</u>	<u>.041</u>
Increase	\$ 8.37	\$.011

No. 126 - Docks, Trestles and Pockets.

1918	\$ 99.86	\$.002
1919	<u>242.15</u>	<u>.006</u>
Increase	\$ 142.29	\$.004

In 1918 practically all engineering charges were absorbed by E and A. No. 361.

The increase is partly due to higher average wages, but mostly to the operation of "D" shaft, requiring stope-samples and production-samples from several grades daily.

This is a Central Office charge. The principal items were as follows:-

	1918	1919
Medical & Hospital Exp.	\$ 234.14	\$ 347.00
Compensation Charges	72.47	99.00
Hospital Deficit	<u>144.58</u>	<u>811.37</u>
Total	\$ 451.19	\$ 1257.37

A mine office was not operated until April 1918, and thereafter in that year a large proportion of the cost for this account was absorbed by E and A. No. 361.

In 1919 the principal charges are for preparing stocking-floors.

MAINTENANCE. (Continued)

No. 127 - Buildings.

1918	\$	131.39	\$.002
1919		<u>493.32</u>	<u>.012</u>
Increase	\$	361.93	\$.010

No. 128 - Shop Machinery.

1918	\$	172.67	\$.003
1919		<u>94.57</u>	<u>.002</u>
Decrease	\$	78.10	\$.001

No. 129 - Boiler Plant.

1918	\$	1.46	\$.000
1919		<u>39.47</u>	<u>.001</u>
Increase	\$	38.01	\$.001

No. 130 - Hoisting Machinery.

1918	\$	874.13	\$.015
1919		<u>623.22</u>	<u>.015</u>
Decrease	\$	250.91	\$.000

No. 131 - Compressors and Power Drills.

1918	\$	48.03	\$.001
1919		<u>403.64</u>	<u>.009</u>
Increase	\$	355.61	\$.008

No. 132 - Pumping Machinery.

1918	\$	446.72	\$.008
1919		<u>1054.70</u>	<u>.025</u>
Increase	\$	607.98	\$.017

No. 133 - Top Tram Engines and Cars.

1918	\$	446.72	\$.008
1919		<u>1054.70</u>	<u>.025</u>
Increase	\$	607.98	\$.017

No. 134 - Skips and Skip-Roads.

1918	\$	857.73	\$.015
1919		<u>1144.23</u>	<u>.027</u>
Increase	\$	286.50	\$.012

No. 135 - Underground Tracks and Cars.

1918	\$	422.38	\$.007
1919		<u>1347.03</u>	<u>.032</u>
Increase	\$	924.65	\$.025

In 1918 nearly all maintenance charges were taken up in construction charges. In 1919 the principal charges were for painting and for changing the piping in the dry, lockers for the carpenter shop, screen-doors and electric lights in the office, and moving surface dry from the East End to No. 56.

1918 charges covered the installation of a hammer and drill-sharpener in the blacksmith shop.

In 1918 the principal charges were for repairs to Happy Hollow and East End hoists and for 1950 feet of hoisting-rope. In 1919 there were minor repairs to "D" shaft hoist, and the cost of dismantling the East End and Happy Hollow hoists was charged to this account.

In 1919 one drill was charged out. The balance is for labor repairing and thawing out the air-line from the Lake Mine.

In 1919 the principal items were the cost of repairing and removing the pumps from the East End Pit, and for disconnecting and repairing the Cameron pump at "D" shaft and laying siphon pipes.

1919 charges were higher principally on account of repairing side-dump cars at the East End and taking up rail and moving sheaves at the East End and Happy Hollow Pits.

In 1919 a new skip was built and the old one repaired, and some new runners were put in the shaft. There were charges both years for cutting ice.

In 1918 most of these charges were absorbed by construction accounts. In 1919 operations underground were more than doubled, and new cars were built and much track laid.

MAINTENANCE. (Continued)

No. 137 - Telephones and Safety Devices.

1918	\$	149.90	\$.003
1919		<u>385.48</u>	<u>.009</u>
Increase	\$	135.58	\$.006

The increase in 1919 is in underground safety precautions and guards, and for outfit for the first-aid room.

MINING EXPENSE.

No. 150 - Air-Pipes.

1918	\$	618.61	\$.011
1919		<u>1205.42</u>	<u>.029</u>
Increase	\$	586.81	\$.018

The increase is due to the extended operations underground in "D" shaft.

No. 151 - Compressors.

1918	\$		\$
1919		<u>2145.00</u>	<u>.051</u>
Increase	\$	2145.00	\$.051

The Angeline Mine buys its air from the Lake Mine. In 1918 this charge was split up and charged to the various accounts for which the air was used, mostly "breaking ore."

No. 152 - Hoisting.

1918	\$	1551.86	\$.027
1919		<u>4331.80</u>	<u>.103</u>
Increase	\$	2779.94	\$.076

In 1918 hoisting was started at both Happy Hollow and "D" shaft. "D" shaft started late in the year, on one shift only. Hoisting was done on 2 shifts during most of 1919.

No. 153 - Pumping.

1918	\$	1135.85	\$.020
1919		<u>5589.96</u>	<u>.133</u>
Increase	\$	4454.11	\$.113

Pumping was not started at "D" shaft until late in 1918.

No. 154 - Sinking and Shaft Repairs.

1918	\$		\$
1919		<u>40.68</u>	<u>.001</u>
Increase	\$	40.68	\$.001

1918 charges were taken up on E and A. No. 361.

No. 155 - Rock Drifting.

1918	\$	4176.82	\$.073
1919		<u>1474.47</u>	<u>.035</u>
Decrease	\$	2702.35	\$.038

In 1918 an expensive raise was charged to this account. In 1919 much of the seventh level drifting was charged to E and A. 361.

No. 156 - Breaking Ore.

1918	\$	34585.03	\$.602
1919		<u>52771.19</u>	<u>1.254</u>
Increase	\$	18186.16	\$.652

In 1918 most of the ore was mined by steam-shovel, but in 1919 most of it came from drifts and raises underground.

No. 157 - Trammig.

1918	\$	5321.06	\$.093
1919		<u>13345.31</u>	<u>.317</u>
Increase	\$	8024.25	\$.224

In 1918 the bulk of the ore was mined by steam-shovel. In 1919 most of it came from underground. On account of water in the raises, it was necessary to tram on two shifts in 1919.

MINING EXPENSE. (Continued)

No. 159 - Timbering.

1918	\$	1308.33	\$.023
1919		<u>9577.34</u>	<u>.227</u>
Increase	\$	8269.01	\$.204

No. 160 - Captain and Bosses.

1918	\$	2120.96	\$.035
1919		<u>6253.33</u>	<u>.149</u>
Increase	\$	4132.37	\$.114

No. 161 - Dry-House.

1918	\$	373.86	\$.007
1919		<u>2193.02</u>	<u>.052</u>
Increase	\$	1819.16	\$.045

No. 162 - Top Landing and Trammig.

1918	\$	1508.12	\$.026
1919		<u>5486.96</u>	<u>.130</u>
Increase	\$	3978.84	\$.104

No. 163 - Stocking Ore.

1918	\$	873.40	\$.015
1919		<u>1829.39</u>	<u>.043</u>
Increase	\$	955.99	\$.028

No. 165 - Stripping.

1918	\$	25938.72	\$.451
1919		<u>4786.44</u>	<u>.114</u>
Decrease	\$	21152.28	\$.337

No. 166 - Cave-In.

1918	\$		\$
1919		<u>3.40</u>	<u>.000</u>
Increase	\$	3.40	\$.000

No. 171 - Ventilation.

1918	\$	371.49	\$.006
1919			
Decrease	\$	<u>371.49</u>	<u>\$.006</u>

The increase is due to the increased production from underground in 1919.

Captain Marks started work here on April 15th, 1918. One shift-boss was put on later. In 1919 there were two bosses most of the year.

The dry at "D" shaft was in use only a small part of 1918.

Hoisting on one shift started late in 1918. In 1919 hoisting was done on two shifts most of the year.

The increase is due to tearing down and erecting stocking trestles in 1919, which was necessary twice during the season.

There was a relatively small amount of stripping done in 1919.

A fan was employed on the seventh level for a short time in 1918.
